

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: Alternatives for Growth: The Engineering and Economics of Natural Resources Development

Volume Author/Editor: Harvey J. McMains and Lyle Wilcox, eds.

Volume Publisher: NBER

Volume ISBN: 0-88410-480-X

Volume URL: <http://www.nber.org/books/mcma78-1>

Publication Date: 1978

Chapter Title: Index

Chapter Author: Harvey J. McMains, Lyle Wilcox

Chapter URL: <http://www.nber.org/chapters/c0949>

Chapter pages in book: (p. 239 - 260)

Index

- Abelson, Philip, 38
Abu-Lughod, Janet L., 235
Affluence, 200-202
Africa
 birth rates of, 171-73
 death rates of, 171-73
 and housing needs, 160
 land use potential, 112
 and rural growth rate, 173
 and urban growth rate, 152, 154, 158, 173
 and urbanization, 156
Age composition
 and fertility reduction, 162-63, 175-76, 180, 182-83
 food requirements for, 208, 210
 and population growth, 225-27
Age pyramid, 162-63
Age structure, *See* Age composition
Agriculture
 changes in, 123, 139-45
 food problem, 99-102, 108-109, 131-36
 and land use, 99-100, 108-16
 in less developed countries, 109, 136, 152
 market for, 99, 142
 and mobility revolution, 165-66, 168
 percentage of population in, 5-6
 research, 131-32, 136, 140-42, 144-45
 technology for, 5-6, 104, 106-109, 112, 123-24, 234, 236
 and urbanization, 206-207
Air pollution, 81, 91
Alabama Agricultural Experiment Station, 143
Aluminum, 70, 73, 88
American Gas Association, 54
American Petroleum institute, 54, 92
Animal
 feed systems, 135, 143
 new, as food sources, 142-43
 production, 103-104, 135
 protein food, 203-206
 waste, 135, 143-44
Annual population growth rate, projected, 181-83, 185-90
Apollo program, 3-4, 13-14, 20, 28-29
Arab oil embargo. *See* Oil embargo 1973-74
Arizona, 4
Atomic Energy Commission, 54
Australia
 as a developed country, 151
 grain exports from, 103
 and land use potential, 112-13
 uranium in, 62, 64
Automobile, effects of, 7, 19
Availability
 of food, 106
 of fuel, 46-49, 65-69, 89
 of health services, 208
 index years of, 47, 49-50, 67, 80
 of land, 100-101

- of natural resources, 43-47, 79-84, 85-94
- of nonenergy raw materials, 46, 69-73, 86-89
- of nonrenewable resources, vs. economic growth, 73-77
- Average annual growth rates, 154-55, 158, 198-99
- Average yields, 118-19
 - of cereal crops, 104-107
 - of corn, 105
 - of rice, 118
 - of wheat crops, 104-105, 118

About the Contributors

P. Buringh, research scholar, educator, author. Presently Prof. Buringh is a member of the Dept. of Soil Science, Agricultural University, Wageningen, The Netherlands. He served as President of the Landbouwhogeschool (Agricultural Univ.) from 1970-1973 when he elected to return to his chair as Prof. of Tropical Soil Science. His current research deals with potential food production as limited by climate, water and soil, and he is author of *Computation of the Absolute Maximum Food Production of the World*.

Glenn W. Burton, Research Geneticist. Presently Dr. Burton is an Agricultural Research Service, USDA Research Geneticist at the Coastal Plain Station, Tifton, Ga. He is a Distinguished Alumni Professor in the Agronomy Division, University of Georgia and served as its Chairman for 14 years. His many awards include the USDA Superior Service Award and membership in the National Academy of Science. He has consulted on food production in many countries and was a member of a plant science team invited to the People's Republic of China in 1974 to help improve their plant science and agriculture.

Robert Clark, economist, educator, author. Presently Asst. Professor, Department of Economics, North Carolina State University; Senior Fellow, Center for the Study of Aging and Human Development, Duke University and Project Director, National Science Foundation Grant, "Age Structure and Economic Change." Formerly, Post-doctoral Fellow, Center for Aging and Human Development, Duke Univ.; Investigator, National Science Foundation Grant, "Economics of a Sta-

tionary Population: Implications for the Elderly," directed by Juanita Kreps. Coauthor (Juanita Kreps), *Sex, Age and Work: The Changing Composition of the Labor Force*.

Benjamin C. Dysart III, civil engineer, educator, conservationist. Presently Professor of Environmental Systems Engineering, Clemson University; Director and Executive Committee member, National Wildlife Federation. Formerly, Scientific Advisor for Civil Works, Office of the Secretary of the Army; site visitor, National Science Foundation; Civil Works Advisory Committee, Dept. of the Army; staff engineer, Union Carbide Corp.; member, S. C. Heritage Advisory Board; President, S. C. Wildlife Federation; Director, Water Resources Engineering and Water Resources Research Institute, Clemson University.

James E. Halpin, administrator, research pathologist, educator. Presently, Dr. Halpin is Director-at-Large, Southern Agricultural Experiment Stations; member, National Planning Committee (USDA) for Agricultural Research; member, Agricultural Research Policy Advisory Council (USDA) and Fellow-American Association for the Advancement of Science. Formerly, Professor of Plant Pathology, Clemson University; Assoc. Director, S. C. Agricultural Experiment Station; Assistant Agronomist with The Rockefeller Foundation Program of Agricultural Research (Columbia, Mexico, Chile). Research interests: soil-borne organisms and the diseases they incite in forage crops.

Gordon J. MacDonald, government official, geophysicist, educator, author. Presently Henry R. Luce Professor of Earth Sciences and Director of Environmental Studies and Policy at Dartmouth College. Prof. MacDonald is also consultant to the U.S. State Dept., Chairman, Commission on Natural Resources, National Academy of Sciences, and a member of the Dept. of State's Advisory Committee on Science and Foreign Affairs. The author of *The Rotation of the Earth*, he has been a consultant to the U.S. Geological Survey; a member of the President's Council on Environmental Quality; consultant to NASA, member, President's Science Advisory Committee; and director of the Atmospheric Research Laboratory, University of California.

John J. McKetta, Jr., educator, chemical engineer, author. Presently, E.P. Schoch Professor of Chemical Engineering at the University of Texas-Austin where he was Dean of Engineering and Executive Vice Chancellor-Academic Affairs for the entire University of Texas

system. Formerly, Chairman, National Energy Policy Committee and the National Air Quality Control Committee; president, Chemoil Cons., Inc. Director of 11 companies and author of the 10 volume *Advances in Petroleum Chemistry and Refining* and the new 25 volume encyclopedia on chemical processing.

Harvey J. McMains, executive, engineer, educator. Vice President and Executive Director, National Bureau of Economic Research; Professor of Management, U.S. Army War College. Formerly, Director, Corporate Planning, Data Communications Planning, Analytical Support, American Telephone and Telegraph; Adjunct Professor, Management Philosophy, Pace University; member, technical staff and Chief Engineer, Bell Telephone Company.

John R. Meyer, economist, educator, author. Presently, Professor, Harvard University; President, National Bureau of Economic Research; Chairman, National Academy of Sciences Committee on the Benefits and Costs of Automobile Emissions Control; member, Commission on Law and the Economy, American Bar Association; Director, Dun & Bradstreet Companies, Inc., Consolidated Rail Corp., Rainier Bancorporation; Trustee, Mutual Life Insurance Co. of New York. Formerly, Professor, Yale Univ.; Committee on Population Growth and the American Future. Author, *The Urban Transportation Problem* and *Local Public Finance and the Fiscal Squeeze*.

John R. Pierce, engineer, educator, author. Presently Professor of Engineering at California Institute of Technology, Dr. Pierce formerly was Executive Director of Research-Communications Sciences, Bell Telephone Labs; a member of the President's Science Advisory Committee, and recipient of the National Medal of Science, the Valdemar Poulsen Gold Medal, and the Morris Liebmann Memorial Prize. He is author of *Man's World of Sound and Symbols, Signals and Noise*.

Andrei Rogers, research scholar, educator, author. Prof. Rogers is Research scholar and Area Chairman, Human Settlements and Services Area, at the International Institute for Applied Systems Analysis in Laxenburg, Austria. Formerly, Dr. Rogers was Professor of Civil Engineering and Urban Affairs at Northwestern University and the University of California-Berkeley. He is author of the following books: *Matrix Analysis of Interregional Population Growth and Distribution*, *Matrix Methods in Urban and Regional Analysis*, and *Introduction to Multiregional Mathematical Demography*.

William J. Serow, demographer, research director, author. Presently, Research Director, Population Studies Center, Tayloe Murphy Institute; Associate Professor, Department of Sociology, University of Virginia; member, Executive Council, Southern Regional Science Association. Formerly, Assistant Director, Bureau of Population and Economic Research; Lecturer, Colgate Darden Graduate School of Business Administration, Univ. of Virginia; and Demographic Intern, Demographic Division, The Population Council. Author, *Potential Influences of Zero Population Growth on American Society*.

H. Guyford Stever, educator, engineer, government official, author. Until January, President Ford's Science and Technology Advisor; Director, Office of Science and Technology Policy; Federal Coordinating Council for Science, engineering, and Technology; U.S. Chairman, US-USSR Joint Commission on Scientific and Technical Cooperation; First Chairman, US-Israel Bi-National Science Foundation. Previously, Director, National Science Foundation; President, Carnegie-Mellon University; Professor of Aeronautics and Astronautics, Massachusetts Institute of Technology; Head, Mechanical Engineering and Naval Architecture and Marine Engineering Departments; Chief Scientist, U.S. Air Force. Author, *Flight*.

Lyle C. Wilcox, author, educator, researcher. Dean of the College of Engineering and Professor of Electrical and Computer Engineering at Clemson University, Clemson, S.C. Principal investigator/director of research projects for the National Science Foundation, NASA and the Department of the Army in Instrumentation and Controls, Computer Applications, Circuits and Systems Design. Listed in National Register of Prominent Americans and International Notables; member American Association for the Advancement of Science.

T. Bruce Yandle, Jr., economist, educator, author. Presently, Senior Economist, Executive Office of the President, The Council on Wage and Price Stability; Head, Department of Economics, Clemson University. Formerly, Dr. Yandle taught at Georgia State University; was Sales Engineer for Austin Brown Associates, and Executive Vice President, Bearings & Drives, Inc. His research interests are in price theory, housing and environmental quality. He is coauthor of *The Economics of Environmental Use*.
