This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: Risk Aspects of Investment-Based Social Security Reform

Volume Author/Editor: John Y. Campbell and Martin Feldstein, editors

Volume Publisher: University of Chicago Press

Volume ISBN: 0-226-09255-0

Volume URL: http://www.nber.org/books/camp01-1

Publication Date: January 2001

Chapter Title: List of Contributors, Indexes

Chapter Author: John Y. Campbell, Martin Feldstein

Chapter URL: http://www.nber.org/chapters/c10601

Chapter pages in book: (p. 483 - 496)

Contributors

Andrew B. Abel
Department of Finance
The Wharton School
University of Pennsylvania
2315 Steinberg-Dietrich Hall
3620 Locust Walk
Philadelphia, PA 19104-6367

David Backus
Stern School of Business
New York University
44 West 4th Street
New York, NY 10012-1126

Marianne Baxter
Department of Economics
Boston University
270 Bay State Road
Boston, MA 02215

Zvi Bodie
Boston University School of Management
595 Commonwealth Avenue
Boston, MA 02215

Henning Bohn
Department of Economics
University of California
Santa Barbara, CA 93106

Jeffrey R. Brown
John F. Kennedy School of Government
Harvard University
79 John F. Kennedy Street
Cambridge, MA 02138

John Y. Campbell
Department of Economics
Littauer Center 213
Harvard University
Cambridge, MA 02138

João F. Cocco
Finance Department
London Business School
Regent's Park
London NW1 45A
England

Martin Feldstein
National Bureau of Economics Research
1050 Massachusetts Avenue
Cambridge, MA 02138

Francisco J. Gomes
Department of Economics
Littauer Center
Harvard University
Cambridge, MA 02138

Robert G. King
Department of Economics
Boston University
270 Bay State Road
Boston, MA 02215

Deborah Lucas
Department of Finance
J. L. Kellogg Graduate School of Management
Northwestern University
2001 Sheridan Road
Evanston, IL 60208

Thomas E. MaCurdy
Department of Economics
Stanford University
Stanford, CA 94305-6072

Pascal J. Maenhout
Department of Economics
Littauer Center
Harvard University
Cambridge, MA 02138

Subject Index

Advisory Council on Social Security: maintain-benefits reform proposal, 6, 14–16, 283
AIME. *See* Average indexed monthly earnings (AIME)
Assumed interest rate (AIR): for CREF ILBA-backed annuity, 336–37, 362–63; for variable annuities, 335, 340; initial annuity payout given, 348
Annuities: annuity-equivalent wealth (AEW), 347–52; compared to social security annuity, 376–77; fixed, 37; framework for evaluating alternative, 344–49; high return on variable, 367; missing markets for, 225–29; optimal retirement account as variable, 415; in privatized system, 9; risky assets in, 415–16; Social Security as variable, 379–80; types and payouts of variable, 377–78; utility gains from access to real, 344–56; valuation of real versus nominal, 352–54; valuation of variable, 354–56
Annuity market, United Kingdom, 322–29; annuity brokers, 325; compulsory and voluntary parts of, 324–25; nominal and real products offered in, 325–29, 362
Annuity market, United States, 322; CPI-indexed income annuity, 329–32; inflation-linked bond account annuity, 329, 332–38; variable annuities, 334–35
APW. *See* Average production worker (APW)
Arbitrage: with privatization of social security, 97, 108–9
Arrow-Debreu securities, 294
Average indexed monthly earnings (AIME): computed by Social Security Administration, 379, 380; of individual, 375–76; individual social security benefit depends on, 376
Average production worker (APW): change in SSW as percent of, 271–72; defined, 260n15

Benefit formulas: reforms in G7 countries and effect on SSW, 263–73; in SSW calculations, 261–62
Bequests, accidental, 225–29
Bonds: annuities linked to CREF index-linked bond account (ILBA), 332–38; risk and annual real returns on government, 33–35, 37–39; riskiness of zero-coupon and long-term, 37–39. *See also* Treasury Inflation-Protected Securities (TIPS)
Bonds, indexed: in U.K. annuity market, 322, 324; in U.S. annuity market, 322

Capital-asset pricing model (CAPM), 293; intertemporal (Merton), 293–94

Chicago Board Options Exchange, 294
College Retirement Equities Fund (CREF): annuities linked to index-linked bond account, 332–33, 362
Consumer Price Index (CPI): assumed change in measurement of, 14; BLS experimental CPI-E index, 365; Boskin Commission report on, 365; changes in CPI-U, 365–66; Social Security benefits indexed to, 321
Costs: associated with U.S. Social Security, 1–4; of government minimum-benefit guarantee, 99–104, 106

Data sources: Consumer Price Index (CPI), 14, 293–94, 321, 365–66; for life-cycle model of portfolio choice, 446–50, 470, 480; OECD Social Expenditure (SOCX) database, 254; for Social Security simulation model, 44
Defined-benefit plans: benefit formulas, 478–79; self-employed provision, 29; social security systems as, 278; U.K. occupation plans, 324–25; universal, 28–30
Defined-contribution plans: risks in, 31; social security systems as, 278; U.S. Social Security system transition to, 3–4
Demographic change: risk associated with uncertainty of, 8, 284; shocks to workforce and to number of retirees, 8, 215–25
Discount. *See* Expected present discount value (EPDV)

Economy, overlapping-generations model, 118–19
Elderly dependency rates: benefit spending with projected increases in, 254–58; under current pension-benefit rules, 250–53
EPDV. *See* Expected present discount value (EPDV)
Equities: annual real returns on, 33–35, 37–38; buy-and-hold strategy, 39; equity premium as compensation of riskiness of, 35–37; included in retirement portfolio, 407–9; long-run risk, 39; premium as compensation for risk, 35–38; uncertainty about returns to, 57–61; U.S. and U.K. returns (1918–96), 383–84
Expected present discount value (EPDV): for ILONA inflation-indexed annuity, 362; of payouts from nominal and inflation-indexed annuities, 361

Financial engineering: applied to investments in life-cycle postretirement phase, 303–5; defined, 293; expansion of user base, 295
Financial instruments: as hedges against human capital risk, 394–97; risk and return of traded assets, 383–84; similar to social security, 376–78
First welfare theorem (FWT), 129
France: benefit-formula reforms and effect on SSW (1993), 263–73; shift from wage to price indexation, 268, 272t

Germany: benefit-formula reforms and effect on SSW (1992), 263–73; shift from gross to net wage indexation, 268, 272t
Government: intergenerational reallocation of risk by, 230; provision of risk sharing by, 133; risk-sharing rules of, 133–38
Gross national product (GNP): growth rate of real, 391–93; labor income as percent of, 388, 390–91

Hedging: against risk, 293; using foreign assets to hedge risky nontraded assets, 371–72; using U.K. government-indexed bonds, 324
Human capital: computing returns to, 397–401; hedging risk associated with, 394–97; as nontradable asset, 388–90, 441; relative net worth, 388–89; risk-return associated with, 390, 393

IB social security systems. *See* Social security systems
Individual accounts for retirement: PRAs in Social Security simulation model, 44–45; PRAs in transition from PAYGO to investment-based system, 46–50; in simulations of alternative PAYGO-PRA combinations, 50–57
Individual behavior: optimization as, 157–61; in risk-sharing, overlapping-generations model, 212–15; structuring of retirement portfolio, 405–12
Inflation: inflation-indexed annuities, 361–62; inflation-linked bond account

annuity, 329, 332–38; persistence of, 365–66, 367–68; Social Security system indexed for, 377, 379. *See also* Treasury Inflation-Protected Securities (TIPS)
Information: in conditional Pareto optimality, 141–42
Intertemporal capital-asset pricing model (ICAPM), 293–94
Investment-based system: basic rationale for, 5; national saving with, 5; risks in, 5, 16–17, 41–42, 75–78, 278–79; in transition from PAYGO to, 46–50, 63–69; transition to, 3–7
Investment management: asset-swap, 15–16, 37–38; capital-asset pricing model (CAPM), 293; mean-variance theory (Markowitz), 293–94. *See also* Financial engineering; Personal investment accounts (PIAs); Portfolio choice
Irish Life Company of North America (ILONA): annuity payouts, 322, 338, 362; CPI-indexed income annuity, 329–32, 338, 362
Italy: benefit-formula reforms and effect on SSW (1992, 1995), 263–73; shift from wage to price indexation, 268, 272t

Japan: benefit-formula reforms and effect on SSW (1994), 263–73; shift from gross to net wage indexation, 268, 272t

Labor income: by education group, 393–94; effect on portfolio choice, 441; in life-cycle model of portfolio choice, 443, 446–50; measuring heterogeneity in, 458–63, 470; as percent of GNP, 388, 390–91; returns to human capital, 388, 390; in simplified two-period life-cycle model of portfolio choice, 477; uncertainty of, 388; volatility of, 388, 390–93
Life cycle: continuous-time model of financial decisions, 295–97; funds in portfolio investment, 294; postretirement phase, 302–5; preretirement phase, 297–302; time in portfolio choice in model of, 442–43, 446; welfare analysis, 465–67. *See also* Portfolio choice

Macroeconomic policy: in risk-sharing, overlapping generations model, 210–12
Markets: incompleteness of, 95–96; producing insufficient risk sharing, 117; risk sharing between generations provided by, 125–33; as risk-sharing mechanism, 131–33; risk spreading function of, 114–15
Medicare: proposed redirection to OASDI, 15
Money: as risk-sharing mechanism, 128–31
Moral hazard, 96–97

OASDI (Old-Age, Survivors, and Disability Insurance): Aaron-Reischauer reform proposal, 14–16, 40; annual seventy-five-year forecast of finances, 11–12; asset-swap of bonds for stocks as investment strategy, 16–25, 37–38; forecasts of trust fund balances, 11–12; investment in private securities, 28–30; maintain benefits (MB) reform proposal (Ball plan), 6, 14–16, 40; PSA-2000 reform plan, 14–15; return to long-run solvency, 13; Schieber-Shoven PSA-2000 plan, 14–15; summary of failure rates of asset-bond strategy, 24–28
Optimality: to define Pareto improvements, 119–20; ex ante and interim, 120–22
Optimization, individual, 157–61
Option pricing: Black-Scholes theory, 294; market developments from theory of, 295; using Black-Scholes formula, 304, 312–13, 316
Options: long- and short-term, 298n11, 317–19; in PIA preretirement phase, 297–302

Pareto improvement: ex ante and interim, 120; optimal, 119–20
Pareto optimality: conditional, 141–42; equal-treatment Pareto optimality, 141–42, 148
Pay-as-you-go system: social security systems as, 247, 278; transition to investment-based system from, 46–50; voluntary, 131–33
PAYGO. *See* Pay-as-you-go system
Payroll tax system: future rise in U.S. Social Security, 1–2; intergenerational transfers, 69–71; mixed investment-based and, 75–78, 278–79; PAYGO system transition to funded defined-

Payroll tax system (*cont.*)
contribution system, 3; projected increase, 11–12; in simulations of alternative PAYGO-PRA combinations, 50–57; transition to investment-based pensions from, 46–50, 63–69. *See also* Pay-as-you-go system
Pension benefit guarantees: arbitrage-pricing method to analyze minimum-benefit, 94–95; likelihood method to analyze minimum-benefit, 94–95; pricing minimum benefit, 97–104; unfunded liabilities after privatization with, 95–96; unfunded liability of privatized social security, 105
Pension benefit guarantees, government: CRRA expected utility with, 73–74; defined by standard portfolio, 69–71
Pension-benefit rules: politically imposed changes in, 279; political risk of changes in, 248–50; spending on state pensions under current, 250
Pension benefits: formulas used in SSW calculations, 261–73; implied generosity (1980–95), 250–54
Pension generosity: determinants, 257; implied (1980–95), 250–54
Personal investment accounts (PIAs): post-retirement phase, 302–5, 312; preretirement phase, 297–302, 312; proposed replacement of U.S. Social Security with, 291–92
Political pressures, 30
Population: aging in Germany and Italy, 248; growth in risk-sharing, overlapping-generations model, 207–15; rule changes related to aging, 249
Portfolio choice: calibration of life-cycle model of, 9–10, 446–50; effect of investor heterogeneity on, 463–65; financial engineering to implement models of, 292–93; life-cycle model of, 416–18; life cycle optimal, 440; long-run, 441; mean-variance process, 293–94; models of optimal, 293; simplified two-period life-cycle model, 475; specification of life-cycle model of, 442–46; summary of life-cycle model of, 474
Portfolio insurance, 294–95
Portfolio investment: in international financial assets, 371; life-cycle funds, 294; uncertainty of returns on, 57–61
Portfolios: analysis of risk and return, 383; combining Social Security with other assets, 381
Portfolios, retirement: with certain lifetime, 402–5; individual structuring of, 405–12; optimal portfolios with uncertain lifetime, 412–16; welfare costs of restrictions on, 409–10
Portfolio selection. *See* Portfolio choice; Portfolio investment
PRAs. *See* Individual accounts for retirement
Primary insurance amount (PIA): computed by Social Security Administration, 379; of individual social security benefit, 376
Privatization of social security: arbitrage with, 97; in model pricing minimum-benefit guarantee, 98–104; perceived net tax rates with, 97; unfunded liability with benefit guarantee system, 99–104. *See also* Investment-based system

Replacement rate concept, 261n19
Retirees: benefits of Social Security reform for, 401–16; effect of Social Security reform on rich and poor, 411–12; effect of stock market collapse on, 124–25
Retirement period: in risk-sharing, overlapping-generations model, 209–10
Retirement plans: company-sponsored hypothetical universal defined-benefit, 29; nonlinearities in defined-benefit benefits formula, 478–79; self-employed provision of defined-benefit, 29; universal defined-benefit, 28–30. *See also* Defined-benefit plans; Defined-contribution plans
Retirement plans, United Kingdom: defined-benefit occupation plans, 324–25; personal pension plans (PPPs), 324–25
Risk management: constant relative risk aversion (CRRA), 71–73; diversification for, 102. *See also* Risk sharing
Risks: defined-contribution plans, 31; demographic, 8; effect on retirees of stock market collapse, 124–25; generational, 113, 115; imposed by universal defined-benefit plan, 29–30; in investment-based and PAYGO systems, 5, 16–17, 75–78, 278–79; political risk in social security systems, 247–48; in

portfolio after transition to investment-based system, 41–42; in selling government bonds to buy corporate stocks, 16–28. *See also* Uncertainty
Risk sharing: in alternative social security policies, 215–25; efficient, 229–33; efficient intergenerational, 114, 122–23, 125–33; with forward transfers for optimal, 124, 129–30; government provision of intergenerational, 133–38; intragenerational, 143–48; markets producing insufficient, 117; optimal ex ante intergenerational, 122–23; optimal intergenerational, 118–19; optimal interim intergenerational, 123–24; in overlapping-generations economy, 7, 118–19; in overlapping-generations model, 7, 207–15; transfers to the elderly as, 116

Saving, national, 5
Social Security Administration: computation of AIME and PIA, 379; current actuarial techniques, 32–33; Office of the Actuary, 12, 14
Social Security simulation model: constant PAYGO tax rate and PRA contributions to maintain benefits, 56–57; partial integration of PRA annuities and Social Security benefits, 55–56; PRA's rate of return with government credits to PRAs, 50–53; rate of return for TIPS securities, 53–54; summary and statistical parameters, 43–46
Social Security system, U.S.: benefits of reform to retirees, 401–16; costs to transition generation, 2–3; cost to taxpayers to obtain benefits in current, 1–2; effect of reform on various wealth groups, 411–12; as financial asset, 380–88; indexed for inflation, 377, 379; proposals to deal with increasing cost problem, 2–4; proposed replacement with PIAs, 291–92; rate of return on contributions to, 439–40; risk and return, 380–83; risk bearers in current, 29; risk with investment in private securities, 29; transition to defined-contribution system, 3–4; transition to investment-based system, 3–5; as variable annuity, 379–80. *See also* Social Security Trust Fund
Social security systems: benefit-cutting model, 273–77; cash flows, 375–76; defined-benefit (DB), 278; defined-contribution (DC), 278; factors influencing revised benefit promises, 283–84; generosity of benefits (1980s, 1990s), 250–54; incentives to reform, 273–77; investment-based (IB), 247, 278; minimum-benefit guarantees in investment-based, 6–7; obstacles to reform, 273–77; pay-as-you-go (PAYGO), 247, 278; political risk, 247–48; potential effect of benefit rule change, 247–49; proposed privatization, 376; state-funded pension expenditures, 247–48
Social Security Trust Fund: current assets of, 153; forecasts of balances, 11–12; funding gaps and buildup, 211–12; funding of and payments from, 164; investment in Treasury bonds, 161; investment returns earned on, 13; proposed investment in private securities, 14; rate of return on, 2; shrinking, 153; in simulations of alternative PAYGO-PRA combinations, 50–57; in transition from PAYGO to investment based system, 48–50
Social security wealth (SSW): benefit formulas in calculations of, 261–62; benefit-rule changes to reduce, 249; with certain and uncertain length-of-life, 279–81; changes from recent reforms to, 260–73; effect of G7 benefit-formula reforms on, 263–73; effect of reforms, 261; gross and net, 249
State-preference theory (Arrow-Debreu), 294–95

Taxation: to maintain Social Security benefits, 56–57; perceived rate with privatization, 97; revenues from asset-bond investment strategy, 25–27
Teachers Insurance and Annuity Association (TIAA)–College Retirement Equities Fund (CREF): inflation-indexed bond account annuity, 329, 332–38; payouts from retirement accounts, 335; variable-payout annuity, 322. *See also* College Retirement Equities Fund (CREF)
Time: in life-cycle model of portfolio choice, 442–43, 446

Total factor productivity: effect of factor-price movements with demographic shocks, 220; in risk-sharing, overlapping-generations model, 207–15
Transfers, intergenerational: by government, 133; of guarantee payments in PAYGO-PRA transition, 69–71; as risk sharing, 116
Treasury Inflation-Protected Securities (TIPS), 53–54, 305–6, 330, 333–34, 338; in U.S. annuity market, 322

Uncertainty: of returns earned on portfolio investments, 57–61; of returns on incremental capital, 61–63
United Kingdom: annuity market in, 322–29; benefit-formula reforms and effect on SSW (1986, 1994), 263–73
United States: benefit-formula reforms and effect on SSW (1983), 263–73

Weak first welfare theorem (WFWT): ex ante and interim, 124f, 129–30
Wealth: annuity-equivalent wealth, 347–52; sources at retirement of, 373–74. *See also* Social security wealth (SSW)
Welfare analysis: with alternative mean asset returns, 468–69; life-cycle, 465–67; paternalistic, 467; weak first welfare theorem (WFWT), 129
Well-being, ex ante and interim optimal, 120
