This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: Behavioral and Distributional Effects of Environmental Policy

Volume Author/Editor: Carlo Carraro and Gilbert E. Metcalf, editors

Volume Publisher: University of Chicago Press

Volume ISBN: 0-226-09481-2

Volume URL: http://www.nber.org/books/carr01-1

Conference Date: June 11â€“12, 1999

Publication Date: January 2001

Chapter Title: List of Contributors, Indexes

Chapter Author: Carlo Carraro, Gilbert E. Metcalf

Chapter URL: http://www.nber.org/chapters/c10614

Chapter pages in book: (p. 347 - 360)

Contributors

Edward B. Barbier
Department of Economics and Finance

Zodrow, G. R., 199

Subject Index

Abatement: actual and predicted costs at state level, 133; of carbon emissions, 119–20; circumstances linked to possibility of, 6; costs of, 133, 145–48; effect of cost on FDI, 145–48. *See also* Pollution abatement

Abatement investment: irreversibility of, 306; under uncertainty, 11, 283–86, 292–95; uncertainty affects, 283–90

Abatement policy: achieving equity-value neutrality, 64–67t, 69–75; distribution of impact of CO_2, 45–48; firm rents in, 54–60; incentives in model of CO_2, 50–54; simulations of distributional impact of, 61–78; without distributional adjustment, 63–69. *See also* Grandfathering; Pollution abatement

Administrative costs: compliance costs as, 94; differences in, 95; of environmental tax policies, 115–18; factors determining variation in, 95; government effect on, 98–99; implementation costs as, 94, 116–18; tax base as determinant of, 117–18, 126; trade-off between incentives and, 94–110; transaction costs as, 94, 96

Agreements, environmental: Kyoto, 3n6; Montreal Protocol, 17; voluntary, 3

Asian countries: acid-rain problems, 227; costs of environmental damage in, 224–26. *See also specific countries*

ATC (Average total cost). *See* Production

Austria: energy tax, 112–13

BACT. *See* Control technology

Carbon tax: abatement policies achieving equity-value neutrality, 64–67t, 69–75; abatement policies without distributional adjustments, 63–69; around the world, 16–17; choice affected by administrative costs, 92; in European countries, 110–15; as instrument for CO_2 abatement, 45–46; policy model, 46–47, 93; shift of burden from producer to consumer, 5, 49; in simulations of distributional effects of abatement policies, 61–78

CER. *See* Data sources; Environmental management; Industrial sector

China: costs of environmental damage in, 224, 226

Chlorofluorocarbons (CFCs): phasing out under Montreal Protocol, 17

Clean Air Act: 1990 Amendments, 5; emissions monitoring under 1990 Amendments, 127–28

Coal: taxes worldwide on, 16

Competition, interjurisdictional: factors of production in model of, 188–98; optimal taxation in model of, 198–202

Compliance costs, 116–17; function of in-

Compliance costs (*cont.*)
dex of state-level environmental, 133; quantifying, 6–8; VAT, 117–18
Conservation Foundation Index, 135–38t, 141–42, 144t, 145
Consumption: general equilibrium model of, 21–35
Control technology: best available control technology (BACT), 161, 183; reasonably available control technology (RACT), 161, 164, 183
Costs: of environmental damage in developing countries, 224–26; of environmental monitoring, 95; to implement environmental policies, 91–92; marginal cost of public funds (MCPF), 40, 42; of NAAQS attainment and nonattainment, 7–8; of pollution tax, 5, 13–14; quantification of regulatory costs, 170–77; related to tax system incentives, 96. *See also* Administrative costs; Compliance costs; Social costs; Transaction costs; Welfare effects

Data sources: Annual Survey of Manufacturers (ASM), 165; Census of Manufactures (CM), 165–67, 178–79; corporate environmental reports (CERs), 253–58, 278–79; Fondazione Eni Enrico Mattei (FEEM), 252, 254; Global Environmental Monitoring System (GEMS), 218; Longitudinal Research Database (LRD), 159–60, 165; NBER-CES Manufacturing Industry Database, 167, 171; Pollution Abatement Costs and Expenditures (PACE), 132, 149, 159–60, 177–81
Debt, external: of resource-dependent developing countries, 244
Deforestation: in developing countries, 223; related to EKC, 246–47
Degradation, environmental: cause in developing countries of, 245–46; in developing countries' environmental regime, 218–24; as externality-related environmental problems, 220; flow and stock externalities occurring from, 243–44; gains from internalizing, 232–34, 236, 247
Developing countries: causes of environmental degradation in, 9, 245–46; characteristics of environmental regime in, 219–27; cost of environmental damage in, 224–26; dependence on natural resources, 244; environmental externalities affecting, 226–27, 242–43; environmental indicators, 228–29; impact of global warming on, 226; measuring environmental failure in, 232–34; reform of environmental policy in, 247; variation in, 220

EAC companies. *See* Industrial sector
EKC. *See* Environmental Kuznets curve (EKC)
Emission permits: exempted or grandfathered, 46n3, 87–88; grandfathered or sold, 5–6, 87–88; market for tradable, 5
Emissions: differences in firms', 345–46; exempt from taxation, 5; in general equilibrium model of production and consumption, 21–35; monitoring of levels of, 95; monitoring problems associated with, 14–15; monitoring under Clean Air Act, 127–28; required lowest achievable emission rates (LAER), 160, 164, 178, 183; revenues from government sale of, 209; volatile organic compounds (VOCs), 160, 163
Emissions tax: administrative costs of, 126; on CFCs, 17; effect of introduction of, 36, 38; input taxes as alternative for, 118–21, 126–27; in model of determinants shaping tax system trade-offs, 105–7; optimal tax rate on, 5; second-best output tax compared to first-best, 40–42; trade-offs between input taxes and, 107–10
Environmental Kuznets curve (EKC): deforestation relationship to, 246–47; econometric problems associated with, 229–30; factors influencing, 247; hypothesis, 228; lack of welfare content, 237–40; literature on, 219; relation of air pollutants to income, 229–30; relation of environmental indicators to income, 228–29
Environmental management: information-based tools for, 253–55
Environmental policy: abatement investment with uncertainty about, 292–95; comparison in developed and developing countries, 234–36; costs to implement, 91–92; design with two instru-

ments, 251, 299–300; efficiency-equity trade-offs, 2; effect of reform on environmental quality, 231–32; information-based instruments for, 251–61; international dimension, 8–9; market instruments as tools of, 251; need to redesign, 1–2, 11–12; Pigouvian tax theory applied to, 1; political restraints on optimal, 2–3; reform in developing countries, 247; revenues from, 48–49; tax-revenue-neutral reform of, 193–98; tools of, 251; use of information-based instruments, 251–52. *See also* Regulation, environmental; Tax policy, environmental
Environmental quality: estimates of failures in developing countries, 219–27; measurement in developing countries, 232–34; National Ambient Air Quality Standards (NAAQS), 7, 160–62
Environmental regime: defined, 217; growth and policy reform in developing countries, 227–32; impact in developing countries, 232–34
Environmental regulation: literature about transaction costs of, 92
Environmental Reporting Monitor (ERM), 254–55, 270
Equity-value neutrality: abatement policies achieving, 64–67t, 69–75; in simulations of distributional effects of abatement policies, 61–63
European Commission. *See* European Union (EU)
European countries: carbon taxes, 6, 110–23; effluent tax, 14; focus on reduction of unemployment, 188; pollution taxes, 16–19; VAT compliance costs, 117–18; voluntary environmental agreements in, 3. *See also* European Union (EU); Nordic countries; OECD countries
European Union (EU): carbon/energy tax exemptions in proposals for, 114–15; EMAS (Eco Management Audit Scheme), 251, 254, 257, 279; proposal related to excise harmonization, 114; proposed energy/CO_2 tax, 91–92, 111–15; proposed tax on energy and CO_2, 111, 114
Externalities, environmental: in developing countries, 219–20, 226–27, 242–43; developing countries' pollutant-based, 221–22; flow and stock, 243; flow and stock externalities from pollution, 243; gains from direct taxation of, 91–92; Pigouvian tax to internalize, 187, 220; policy designed to correct, 1–2; transborder, 226–27; welfare gains from internalizing, 232–34, 236, 247

Factors of production: capital, labor, and environmental resource factor markets, 189–91; environmental resource as, 189; factor markets in model of interjurisdictional competition, 188–93; fixed and variable, 188–89
Firms: asymmetries among, 345–46; equity-value neutrality, 61–63, 69–75; incentives in model of CO_2 abatement policy, 50–54; incentives to reduce emissions, 39; profits, dividends, and equity values in model of CO_2 abatement policies, 54–60; self-selection of NAAQS attainment standard, 7; tax payment neutrality, 63, 75–77
Fondazione Eni Enrico Mattei (FEEM): company database, 9–10, 252–54, 271–77; Environmental Reporting Monitor (ERM), 270; Forum on Environmental Monitoring (FER), 268–69
Foreign direct investment (FDI): analysis of abatement cost effects on, 145–48
Forum on Environmental Monitoring (FER): requirements for CERs, 268–69
FREE (Fund for Renewable Energy and the Environment) Index, 135–38t, 142, 144t

Germany: water effluent charges, 17–18
Global warming, 226
Government: allocation of emission permits, 48–49; protecting industries vulnerable to carbon tax impact, 78, 87–88
Grandfathering: effect in model of CO_2 abatement policies, 58–60; free provision of permits with, 46n3, 87–88; of industrial plants in nonattainment areas, 163–64; of industries in NAAQS nonattainment counties, 160–61; old plants in NAAQS attainment counties, 7, 169–70; of tradable pollution permits, 78, 87
Green Index, 135–38t, 142, 144t

HDR. *See* United Nations *Human Development Report* (HDR) (1998)

Incentives: under NAAQS regulations, 183–85; to reduce carbon emissions, 119; in taxes on energy products, 119; trade-offs between administrative costs and, 94–110
Income tax: interaction of second-best emissions and output tax with, 41–42; when associated with CO_2 abatement tax, 45–46
Index of state-level compliance costs: construction of, 134; function of, 133
Indonesia: costs of environmental damage in, 225
Industrial sector: abatement investment under abatement uncertainty, 283–86; corporate environmental reports (CERs), 254–58; decision to undertake new abatement investment, 286–90; effect of attainment and nonattainment status on plants, 168–69, 184–86; effect of CO_2 abatement policies on regulated, 45–46; environmental audit, award, and compensation companies (EACs), 257–64; environmental costs incurred by plants, 177–81; environmental reporting of, 253–55; impact of policy parameter changes on, 290–92; in model assessing effect of CO_2 abatement policies, 48–49, 93; policy-related location decisions, 295–99, 306–7; quantification of regulatory costs, 170–77; rents become revenues in regulated, 48–49; VOC- and NO_x-emitting industries, 163–65; windfall gains and losses, 5
Information: firm's environmental performance from, 252–53; sharing or leakages related to RJVs, 312–13
Input taxes: administrative costs of, 120, 126; as alternative for emissions taxes, 118–21, 126–27; carbon taxes in European countries, 110–13; trade-offs between emissions taxes and, 107–10
Instruments. *See* Environmental policy; Tax instruments
Internalization: efficiency, 97–99; of environmental externalities, 232–34, 236, 247; technology of, 234
Investment: influence of regulation on, 167–70. *See also* Abatement investment

Japan: air pollution tax, 16

Korea: transformation of economy in, 235
Kyoto agreement, 3n6

LAER. *See* Emissions; Regulation, environmental
League of Conservation Voters (LCV) Index, 135–38t, 142, 144t, 145, 149–50
Levinson index, 135–38t, 143, 144t
LRD. *See* Data sources

Market failures: innovation market failure, 311–12; in model of RJV performance, 320–35, 339; product market failures, 311; at research and development stage, 312–13
Monitoring, environmental: under Amendments to Clean Air Act (1990), 127–28; costs of, 95; Environmental Reporting Monitor (ERM), 254–55, 270; Forum on Environmental Monitoring (FER), 268–69
Montreal Protocol (1989), 17

National Ambient Air Quality Standards (NAAQS): counties in and out of attainment of, 7, 160–62; for ground-level ozone, 7, 160; sanctions related to nonattainment ozone standards, 160
Netherlands: tax on fuels, 112–13
Nitrogen oxides (NO_x): industries emitting, 163; regulation of sources emitting, 160
Nordic countries: CO_2 tax, 112–14; energy and carbon excises in, 120–22; exemptions from tax, 122
Norway: CO_2 tax, 112–14
NO_x. *See* Nitrogen oxides (NO_x)

OECD countries: indirect taxes associated with pollution, 19, 39; solid and hazardous waste tax, 18–19; taxation of final oil products, 122. *See also* European countries
Output tax: application of, 36; second-best emissions, 40–42
Ozone (O_3)(ground-level), 7, 160, 184

Pareto optimality: distance of economies from, 233
Permits: in environmental resource market,

189–90; government allocation of, 48–49; grandfathered free provision of permits, 46n3, 87–88; tradable SO_2 emissions permits, 5. *See also* Emission permits; Grandfathering
Permit trading: among firms, 345–46; grandfathering of tradable permits, 78, 87; market for, 5; in SO_2 emissions, 5
Philippines: costs of environmental damage in, 225
Pigouvian tax: to internalize environmental externality, 187, 220; theory applied to environmental policy, 1
Pollutants: in developing countries' environmental regime, 220–24; as externality-related environmental problems, 220
Pollution abatement: comparison of actual and predicted costs at state level, 133; CO_2 policy in United States, 45; distributional impact of CO_2 abatement, 45–46; model to assess effect of CO_2 abatement, 47, 93; potential effect of CO_2 abatement, 45–46; tax to achieve (Pigou), 13, 36
Production: and demand in model of U.S. economy with international trade, 50–52; general equilibrium model of, 21–35; pollution tax raises costs of, 13. *See also* Factors of production
Property rights: link to externality-related environmental problems, 219–20

RACT. *See* Control technology
Regulation, environmental: of attainment and nonattainment areas, 160–62; in developing countries, 219; effect on industrial plants with high toxic emissions, 168–70; externality-related problems in developing countries, 219–27; grandfathering, 46n3, 87–88; lowest available emission rates (LAER), 160, 164, 178, 183; modeling, 208–15; under NAAQS standards, 160–62; quantifying industrial sector costs of, 170–77, 184–85; rents generated by, 5, 208–12; sanctions, 160; state-level indexes of effort to provide environmental quality, 135–36t, 141–45; as tool of environmental policy, 251
Rents: in absence of regulation, 6; created by environmental regulation, 5, 208–12; creation of scarcity rents, 8, 87; to firms with restricted output, 48; linked to mobile factor of production, 188–92; in model of CO_2 abatement policies, 54–60; private sector appropriation of factor market rents, 190–92; resulting from tax exemptions, 88
Research and development (R&D), environmental: firms' risk-related choices, 345; literature about, 309–11; multiperiod temporal nature of, 342–44, 346; problems of, 2; stochastic outcomes, 341; substitutability of outcomes, 341–42
Research joint ventures (RJVs), environmental: literature about, 310–11, 314–16; market failures, 311–12; model of performance of, 320–35, 339; as potential solution to market failures, 313–14; rationale for, 311; voluntary, 11
Revenues: with allocation of emission permits, 48–49; environment policy-related, 2, 48–49; industrial sector rents as, 48–49; revenue recycling effect, 86; tax-revenue-neutral environmental policy, 193–98; used to reduce other taxes, 209
RJVs. *See* Research joint ventures (RJVs)

Social costs: of environmental policy, 11–12
Southern Studies Index, 135–38t, 142, 144t
Sweden: air pollution tax, 16; CO_2 tax, 112–13

Taxes, environmental: administrative costs for different, 115–18; on air pollution around the world, 16–17; applied to output or input, 36; efficiency of emissions compared to input tax, 97; explicit, 115; imperfect correlation with pollution, 5; indirect taxes around the world, 19, 39; literature about, 19–21; model of costs and effects of mistargeted instruments, 21–28, 36–37; preference for other than emissions taxes, 126–27; problem of accurate targeting, 13–15; second-best, 3, 39–40; on solid and hazardous waste around the world, 18–19; transaction costs influence welfare analysis of, 96; use of revenues from, 2; on water pollution around the world, 17–18. *See also* Tax policy, environmental

Tax instruments: hybrid, 129
Tax instruments, environmental: available to policymaker, 39; costs and effects of mistargeted, 21–28, 36–37; design of, 6; efficiency with and without transaction costs, 96–97; improperly targeted, 4–5, 14–19; information-based, 251–52; policy design with two instruments, 299–300
Tax policy, environmental: administrative costs of, 115–18; in Asian countries, 16; in European countries, 6, 14, 16–19, 110–23; exemption from, 88–89; fairness in, 39; incentives, 96; instruments available to policymaker, 39; reform of existing taxes, 120; reforms in general equilibrium model of production and consumption, 31–35; welfare effects of reform, 31–35. *See also* Carbon tax; Emissions tax; Income tax; Input taxes; Output tax; Pigouvian tax
Tax rates: in general equilibrium model of production and consumption, 21–35; optimal rates in model of mistargeted environmental taxes, 28–31, 36–37; optimal rates on emissions, 5; sectoral differentiations in, 122
Tax system: costs related to directness of incentives, 96; effect of targeted, 13–14; efficiency standard for, 188; measurement of efficiency of, 97; model of determinants shaping trade-offs in, 99–110; optimal taxation in model of determinants of, 102–3; tax base determines administrative costs of, 94–95, 117; tax revenue neutrality, 191, 193; trade-off between transaction costs and internalization efficiency, 97–99; welfare-improving reform, 103–4
Technology: emissions monitoring, 128; of internalization, 234
Transaction costs: as administrative costs, 94, 96; influence welfare analysis of environmental taxation, 96; regulation literature about, 92

Uncertainty: abatement investment under abatement uncertainty, 11, 283–86; abatement investment under policy uncertainty, 11, 292–95
Unemployment: European focus on reducing, 188; link to rents, 8
United Nations *Human Development Report* (HDR) (1998), 221–22, 224, 227

Volatile organic compounds (VOCs): industries emitting, 163; regulation of sources emitting, 160

Welfare effects: of environmental policy reform, 196–98; gains with internalizing externalities, 9, 232–34, 236, 247; gross welfare cost, 96; of introducing new environmental taxes, 118–21; private gross welfare cost, 96–97; with second-best tax rate, 21–36, 38–43
