

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: The Economic Analysis of Substance Use and Abuse: An Integration of Econometrics and Behavioral Economic Research

Volume Author/Editor: Frank J. Chaloupka, Michael Grossman, Warren K. Bickel and Henry Saffer, editors

Volume Publisher: University of Chicago Press

Volume ISBN: 0-262-10047-2

Volume URL: <http://www.nber.org/books/chal99-1>

Conference Date: March 27-28, 1997

Publication Date: January 1999

Chapter Title: List of Contributors, Indexes

Chapter Author: Frank J. Chaloupka, Michael Grossman, Warren K. Bickel

Chapter URL: <http://www.nber.org/chapters/c11166>

Chapter pages in book: (p. 369 - 385)

# Subject Index

- Addiction. *See* Alcohol dependence; Cocaine dependence; Drug dependence; Rational addiction; Substances, addictive
- Addiction Severity Index (ASI) Composite Drug Scale, 166–67, 182–83
- Alcohol abuse. *See* Alcohol dependence
- Alcohol consumption: allocation of behavior to, 128–29; comparing heavy and light social drinkers, 108–11; comparing problem and light social drinkers, 111–15; as complement to cocaine use, 169, 191; cross-price effects between illicit drugs and, 191; differences in nonwage attributes of drinkers and nondrinkers, 255–60; for eight demographic groups, 197–200; with hyperbolic and exponential discounting, 104–6; model of price and cross-price effect on demographic group use, 188, 192–210; in NLSY data, 260; repeated-gambles procedure, 107; studies of correlation of price to, 189; studies of effect of price on, 188–89; study predicting natural resolution of, 115–18, 125. *See also* Ethanol (ETOH) consumption
- Alcohol dependence: alcohol dependence syndrome, 130; costs of, 187; criteria for, 275; direct and indirect effects of, 274; earnings and occupations of men by status of, 268–71; effect on human capital of, 270–72; estimating productivity loss resulting from, 255, 265–67; fringe benefits related to degree of, 261–62; levels of education related to, 272; measure for comparison of jobs of alcoholics and non-alcoholics, 260–61; occupation by status of, 268; people aged 18–29, 30–44, 45–64, 252; productivity losses from, 254–55, 266; as recipients of fringe benefits, 265; related to job characteristics and labor market outcomes, 261–63; relation to occupational choice, 267–69; temporal discounting related to, 103–4; work-related reverse causality, 263–65
- Alcoholism. *See* Alcohol dependence
- Alcohol use. *See* Alcohol consumption
- Animal studies: of addictive and nonaddictive commodities, 76; of cocaine's reinforcing effects, 159–62, 183; consumer choice model of ethanol consumption in rats, 7, 77–101, 127–28; drug as income and access to nondrug reinforcer, 313–16, 358–59; of drug self-administration, 40–41; economic analysis with no medium of exchange, 365–67; effect of income on choice of drugs or nondrug reinforcer, 313; effect of income on different food choices, 312–13; effects of income on drug and nondrug reinforcer preference, 316–20; effect of income on food choice, 312; generalizing results to humans, 356; modeling income changes in, 359–60; of reduction of cocaine abuse, 159. *See also* Human studies

- Beck's Depression Inventory, 43–44
- Behavioral economics: analysis compared and contrasted to econometric analysis, 3–5, 32–55; to analyze substance abuse, 2–3, 31–32; applied to substance abuse and dependence, 20–23, 31, 158, 356; contributions and limitations of, 63–64; in development and evaluation of economic policy, 55–58; studies for cigarette smoking, 33–55, 62–65; to study reinforcement, 158–59
- Causality: methods to determine, 68–69. *See also* Reverse causality
- Choices, intertemporal: in alcohol use and abuse, 103; with hyperbolic and exponential discounting, 104–6; impulsive and self-controlled, 103, 106–7, 125; repeated-gambles procedure, 107; studies of alcohol consumption with money choice, 108–15, 124–25, 128–29
- Cigarette smoking: comparison of demographics of laboratory and real-life, 47–48; as complement to drug abuse, 307–8; demographic characteristics in price-elasticity experiments, 43–44, 46–54; earning money to decrease, 281–82; economic concepts related to, 32–41; estimates of effect of tax rates and smoking restriction index on, 21–24; factors influencing decline of, 16–17; inverse relationship to price of cigarettes, 6; laws restricting or prohibiting, 17, 18–19; using behavioral economics to develop policy for, 55–57
- Cocaine: effect of real price on demand for, 144, 148–50; elasticity of demand related to price, 182–83; factors influencing demand for, 148–50; penalties for possession and consumption, 141–46; prices from STRIDE database, 139; prices in analysis of demand related to price and consumption penalties, 139–46; proposed substitutes for, 169–70; reinforcing effect of, 158; variables for analysis of youth demand for, 141–44
- Cocaine abuse. *See* Cocaine dependence
- Cocaine consumption: age of initiated use of, 331; animal subjects to study reinforcing effects of, 158–62; clinical trials for contingency management of, 165–68, 181–82; determinants of youth, 151–53; for eight demographic groups, 197–98, 203–5; employment-based intervention for unemployed, 293–94; evidence outside treatment clinic, 168–71; human subjects to study reinforcing effects of, 162–65; incidence of, 157, 170–71; lifetime, 133–34; measures from MTF survey data, 137–38; monetary-based contingency-management intervention, 289–93; price relationship to, 169; socioeconomic and demographic determinants of, 151–52; studies of effect of price on, 188–90
- Cocaine dependence: alcohol use as complement to, 169, 191; among disability beneficiaries, 284–85; among methadone patients, 283, 286–87; contingent management intervention for, 165–68, 181–82; costs of, 141; proposed methods of reduction among criminals and disabled, 170–71
- Cocaine use. *See* Cocaine consumption
- Commodities, addictive. *See* Substances, addictive
- Community Reinforcement Approach (CRA): counseling for illicit drug use, 166–67
- Consumer choice model, 7, 77–101, 127–28
- Contingency management: alternative intervention strategies, 304–5; failure of drug-treatment community to implement, 306–7; monetary-based intervention, 289–94; in treatment of illicit drug abuse, 165–68, 181–82, 288–89
- CRA. *See* Community Reinforcement Approach (CRA)
- Data: cross-cultural sets to infer causality, 68; exogeneity of price data, 195–96; measurement error in price data, 196; primary sampling units (PSUs), 192n1, 194; use of behavioral economics data in econometric analysis, 32–55, 61
- Data sources: ACCRA *Inter-City Cost of Living Index*, 194–95, 197; Brewer's Association of Canada International Survey, 195; Center for Addiction and Pregnancy, Baltimore, 293, 305–7; on cocaine and marijuana use among high school seniors, 134–35; consumer price index (CPI), 196–97; Current Population Survey (CPS) related to ST and tobacco use, 18; Department of Commerce *City and County Databook*, 195; Drug Enforcement Agency STRIDE data, 135, 181;

- Monitoring the Future (MTF) surveys, 137, 181, 191; National Household Survey, 169, 288; National Household Survey of Drug Abuse (NHSDA), 188, 192, 279, 328, 331, 333–36, 357–58; National Longitudinal Survey of Youth (NLSY), 191, 252, 260, 328, 333, 337–41, 357–58; penalties for marijuana and cocaine possession and sale, 142–43; for snuff products and use, 17, 62; tobacco tax rate data, 18; for tobacco use, 15
- DEA. *See* Drug Enforcement Agency (DEA)
- DEE index. *See* Discretionary Ethanol Expenditures (DEE) index
- Demand: of cigarette smokers with different product prices, 35–41; for cocaine, 139–46, 148–50, 182–83; of drug users across range of unit prices, 40–42; in economic interpretation of cigarette smoking, 34–41; in rational addiction model, 136, 139–40; related to marijuana decriminalization, 141–46, 150–51; related to price of heroin, 217–30, 232; youth demand model, 143. *See also* Elasticity of demand
- Demographics: of alcohol, marijuana, cocaine, and heroin use, 197–210; cross-price regressions of substance use by eight groups, 197, 205, 208–10; studies of cigarette smoking, 47
- DFA. *See* Discriminant function analyses (DFA)
- Discount functions: behavioral implications of hyperbolic discounting, 118; differences in descriptions of temporal discounting, 118; hyperbolic and exponential, 104–6; hyperbolic discount functions for heavy and light drinkers, 110–13, 124–26
- Discounting, temporal: comparison of heavy and light social drinkers, 108–15; discount function differences in describing, 118; preference related to, 103–4
- Discretionary Ethanol Expenditures (DEE) index, 116–18
- Discriminant function analyses (DFA), 116–17
- Drinking. *See* Alcohol consumption
- Drug consumption: age of initiation of, 331, 333–36; correlation with poverty, 334–36, 357; cross-price effects between alcohol use and, 191; determinants of effect on poverty, 328–30, 332; differences between drug and nondrug users, 334–36; impact of prices and drug control policies on, 137–53; lifetime, 133–34, 333–36; methods to decrease in self-administration, 281; model of price and cross-price effect on demographic group use, 188, 192–210; multivariate analysis of effect on poverty of (NHSDA data), 341–47; multivariate analysis of effect on poverty of (NLSY data), 347–52; NHSDA data, 333–36, 340–41, 357–58; NLSY data, 333, 337–41, 357–58; in non-drug reinforcer environment, 285–87; offering pay for work to unemployed, 283–84; problems at work related to, 287–88; rates by age, 333; reduction (1970s–1990s), 133–34; revival (late 1990s), 134; studies of effect of price on, 188–90; study about price elasticity of demand for, 135–36; by teenagers in MTF surveys, 134; unemployment associated with, 279–80, 302–3; using employment for drug treatment, 9; wage loss with, 287–92. *See also* Cocaine consumption; Heroin consumption; Marijuana consumption
- Drug dependence: contingency management designed to treat, 182; contingency management intervention in treatment of, 165–68, 181–82; costs of, 187; effect of supportive employment on, 282; nicotine use as, 307–8; problems of polydrug abuse, 213; simulation of relationship between price and polydrug abuse, 216–17; treatment using results of behavioral economics studies, 3–4. *See also* Cocaine dependence
- Drug Enforcement Agency (DEA), STRIDE database, 135, 139–40, 169, 195
- Drug legalization: argument for and against, 134; studies related to marijuana use, 136. *See also* Laws; Marijuana decriminalization
- Drug market: model of labor market in relation to, 300–302
- Drugs: complement to money, 284–85; cross-price effects between illicit drugs and alcohol, 191; effect of prices and drug control policies on demand for, 135; reinforcing effects using behavioral economics measures, 320–22; self-administration, 3; use and abuse of legal and illegal, 66–67
- Drug treatment. *See* Treatment for drug dependence

- Earnings. *See* Income; Wages
- Econometric analysis: compared to behavioral economics analysis, 4–5, 41–55; of drug consumption, 32; using data from behavioral economic studies, 41–55
- Economics: of alcohol consumption, 129; exponential discount function, 104–6
- Education levels: related to FTQ score, 50–54; relation to price elasticity of demand, 49–50; and skill levels of drug abusers, 293–94
- Elasticity of demand: cross-price, 214–16; in determining changes in drug use, 182–83; effect of heroin own-price on demand for other drugs, 217–21; effect of heroin price increase on, 217–21; experiments involving cigarette smokers, 43–50; for illicit drugs, 135–36; income, 214–16; income effect on drug demand, 228–30; own-price, 214–16, 233–34; price dependence, 135–36; relation of FTQ scores to predicted arc elasticity, 48–49; relation to levels of education, 49–50
- Employment: characteristics of alcohol-dependent men, 261–63; comparisons of occupations of alcoholics/nonalcoholics, 260–61; effect on drug consumption, 285–87; features potentially affecting drug use, 282–85; relation of alcoholism to occupational choice, 267–69; support for drug abusers, 282; as treatment for drug abuse, 9, 281–85. *See also* Fringe benefits; Income; Labor market; Unemployment; Wages
- Ethanol (ETOH) consumption: animal consumption with conversion of time constraint on income, 363–65; in animal income study of drug and nondrug reinforcer, 313–25; in consumer choice model using rats, 7, 77–101, 127–28; control conditions for addictive-nonaddictive commodity experiment, 81–82; by rats in addictive-nonaddictive commodity experiments, 76–96
- ETOH. *See* Ethanol (ETOH) consumption
- Excise taxes: applied to smokeless tobacco products, 17; in cigarette and ST demand model, 20; on cigarettes, 16–17
- Fagerström Tolerance Questionnaire (FTQ) of nicotine dependence, 43–44, 47
- Fringe benefits: alcohol dependence and smoking status related to receipt of, 272–73; cost of provision to alcohol dependents, 265–66; preferences of alcohol dependents for, 261–62
- FTQ score. *See* Fagerström Tolerance Questionnaire (FTQ) of nicotine dependence
- Heroin consumption: among methadone patients, 283, 286–87; for eight demographic groups, 197, 205–7; employment-based intervention for unemployed, 293–94
- Heroin price: effect on demand for other drugs, 229–30; experiment 1: effect on demand for other drugs with increased, 217–21, 230, 232; experiment 2: effect on demand for other drugs with increased, 221–27, 230, 232; experiment 3: relation of income to drug demand, 228–30, 232
- HMCT. *See* Hypothetical money choice task (HMCT)
- Human capital: depreciation through alcohol consumption, 267; effect of drug use on, 329–30
- Human studies: with alcohol as complement to cocaine consumption, 164–65; of cigarette smoking, 33; effect of income on choice of cigarettes, 312; of reduction of cocaine abuse, 162–64; in studies of cocaine's reinforcing effects, 162–65. *See also* Animal studies
- Hypothetical money choice task (HMCT), 108–9
- Income: animals' demand for drug as income and nondrug reinforcer, 313–16; animals' food choice related to income levels, 312; animals' intake of superior goods with increased income, 320; defined in animal studies of drug use, 359–60; definition in economics, 359; in demand for drugs, 311; effect of income on choice of drug or nondrug reinforcer, 313; effect on animals' choices among different foods, 312–13; effects on animal preference for drug or nondrug reinforcer, 316–20; humans' cigarette choice related to income levels, 312; relation between drug use and, 9–10
- Institute for Social Research (ISR), University of Michigan, 137
- Interventions: alternatives to contingent man-

- agement drug-related, 304–5;  
employment-based, 9, 281–85, 293–94.  
*See also* Contingency management
- Iso-sensitivity functions, 67
- Just noticeable differences (JND) principle, 67
- Khavari Alcohol Test (KAT), 108, 112
- Labor market: consequences of alcoholism for men and women, 260; model of drug market in relation to, 300–302. *See also* Employment; Income; Wages
- Laws: in cigarette-snuff demand model, 20–27; Comprehensive Smokeless Tobacco Act (1986), 26; effect on drug use, 175; effect on sale of cocaine and marijuana to youth, 153; impact on tobacco use, 15–16; marijuana decriminalization, 136, 141–46, 150–51, 153, 175, 189–90, 196; restricting or prohibiting smoking, 17–19. *See also* Tax rates
- Marijuana: age of initiated use of, 331; determinants of youth as users of, 151–52; penalties for possession and consumption, 141–46; studies related to legalization of, 136; youth demand model for, 141–43, 145t
- Marijuana consumption: for eight demographic groups, 197–98, 201–2; lifetime, 133; measures from MTF survey data, 137–38; price for, 141; socioeconomic and demographic determinants of, 151–52
- Marijuana decriminalization: in analysis of youth drug demand, 141–46, 150–51; Australian expiation system, 175; effect on demand for, 150–51; effect on use of, 153, 189; state-level laws, 190, 196; studies of effect on drug use of, 189–90
- Methadone patients: continued drug use among, 283, 286–87; voucher-based abstinence reinforcement, 289–93
- Michigan Alcohol Screening Test (MAST), 108, 232
- Monitoring the Future (MTF) surveys, 133–34, 137, 153, 169
- National Household Survey of Drug Abuse (NHSDA), 188, 192–94
- Nicotine: as complementary drug, 307–8; FTQ score of dependence, 43–44, 47; nicotine replacement therapy (NRT), 64–65; relation between FTQ score and withdrawal, 48–49
- Nicotine delivery: available devices for, 65; legality of systems for, 66; research methods to understand, 66–70
- Phencyclidine (PCP): animal consumption with conversion of time constraint on income, 360–63; in animal income studies of drug and nondrug reinforcer, 313–25, 358–59
- Poverty: as cause of drug use, 330; correlation with drug use, 334–36; determinants of, 329–31; drug use, effect on, 328–29, 357; indicators by drug use, 334–36; multivariate analysis of effect of drug use (NHSDA data), 341–47; multivariate analysis of effects of drug use on (NLSY data), 347–52; reduced-form poverty model, 332
- Price: of addictive goods, 1–2; in animal and human studies of cocaine use, 8; of cigarettes in cigarette and ST demand model, 20–26; in consumer choice model of ethanol-experienced rats, 77–101; cross-price regressions for substance use by eight demographic groups, 197, 205, 208–9; as determinant of teenage smoking and alcohol abuse, 2; econometric analysis using behavioral economics data, 41–55; in economic interpretation of cigarette smoking, 34–41; relation of heroin use to price of other substances, 8–9; relation to drug use, 135–36; relation to use of addictive substances, 2–4; relation to youth drug use, 7–8, 174–77; simulations of relation between polydrug abuse and, 216–17; studies of effect on drug use, 189–90. *See also* Heroin price
- Primary sampling units (PSUs), 192n1, 194
- Productivity: differences in nonwage attributes in measuring, 255–60; effects of alcoholism on, 9, 254–55; effects of cigarette smoking on, 271–72; estimating losses from alcoholism, 255, 265–67
- Psychology: hyperbolic discount function, 104–6
- Public policy: for cigarette smoking, 55–57; to increase costs of alcohol and drug abuse, 187–88. *See also* Laws; Tax rates
- Rational addiction: concept of, 244–46; job choices of rational addicts, 271–74, 299–

- Rational addiction (*cont.*)  
 300; in study of consumer choice for ethanol-experienced rats, 77–101, 122–24; use of term, 10
- Rational addiction model: demand for cocaine by young adults, 139–40; extension to include occupational choice, 253; labor market implications of, 274; price elasticity of cocaine demand, 136; time discount with alcoholic consumption, 258
- Rats: exposed to ethanol using Samson sucrose-ethanol fading technique, 78–82, 90, 94; response to price increases of ethanol and non-ethanol liquids, 77–100
- Receiver-operator-characteristic (ROC) curves, 67
- Reinforcers, drug: cocaine as, 158; self-administration as, 3
- Reinforcers, nondrug: animal access to, 313–20, 358–59; in cocaine use contingency-management applications, 165–68; to decrease self-administration of drugs, 281; drug consumption in environment of, 285–87; effect of income on choice between drugs and, 313; effect of income on choice of drug or, 313–20; as income, 285–87, 291–92; meaning of, 356–57; substitution for drugs of, 322–23; voucher-based contingency-management intervention as, 289–95
- Repeated-gambles procedure: applied to impulsiveness of social drinkers, 107; in comparison of heavy problem and light drinkers, 111–15; preferences in, 106
- Reverse causality: in alcohol dependence related to work, 263–65; in determinants of labor market outcomes and drug use, 331
- Saccharine: animal consumption with conversion of time constraint on income, 360–65; in animal income study of drug and nondrug reinforcer, 313–25
- Samson ethanol-sucrose fading technique, 78–82, 90, 94, 123
- Signal detection theory, 67
- Smokeless tobacco, 15; Comprehensive Smokeless Tobacco Act (1986), 16; demand for, 61; laws restricting use of, 18–19; as substitute for cigarette smoking, 61–62
- Smoking regulation index: in cigarette and ST demand model, 21–24; defined, 19
- Snuff: estimates of effect of tax rates and smoking restriction index on, 21–24; excise taxes applied to, 17; marketing of moist, 16; prices in cigarette and ST demand model, 20; use of, 15
- ST. *See* Smokeless tobacco
- STRIDE (System to Retrieve Information from Drug Evidence) database, 135, 139–40, 169, 195
- Substances, addictive: alcohol as, 75; differences between nonaddictive and, 76; effect of increases in full price of, 2; ethanol in consumer choice experiments, 77–101; long-run and short-run responses to price change in, 75–76; regulation in United States, 1
- Substances, nonaddictive: long-run and short-run elasticities for, 76
- Substance use and abuse: behavioral economics studies of, 158; differences in economic and behavioral approaches to, 3–5; sensitivity to price of youth and adult, 153; using econometric or behavioral economics analysis, 4–5
- Substitution: in contingency management treatment, 182; of nondrug reinforcers, 322–23; proposed cocaine substitutes, 169–70; of smokeless tobacco for cigarette smoking, 61–62; of valium for heroin, 233
- Tax rates: in cigarette-snuff demand model, 20–27; data for, 18, 61–62; effect of tobacco rates on drug consumption, 17; effect on price of tobacco products, 62–63; effect on tobacco consumption, 15–16; proposed increase for cigarettes, 63. *See also* Excise taxes
- Tobacco: chewing tobacco, 15, 17; factors contributing to consumption of, 68–69; multivariate analysis of consumption, 68–69; price relative to price of illegal drugs, 66. *See also* Cigarette smoking; Nicotine; Smokeless tobacco; Snuff
- Treatment for drug dependence: dominant models of, 307; employment-based intervention, 9, 281–85, 293–94; evidence outside treatment clinic, 168–71; unemployment associated with poor, 280–81; using employment to enhance, 9. *See also* Contingency management
- Treatment Outcome Prospective Study (TOPS), 280

Unemployment: associated with poor drug treatment retention, 280–81; association with drug use, 279–80, 302–3

Valium: as substitute for heroin, 233

Voucher system: in contingency management treatment, 182; monetary-based contingency-management, 289–95; yoked control group, 289–90, 303

Wages: differences in wages of alcoholics and nonalcoholics, 255–60; loss related to drug use, 287–92; of men by occupation and alcohol dependence status, 268–71

Young Adult Alcohol Problem Screening Test (YAAPST), 112, 126

Youth demand model, 143
