Import Competition and Response
Edited by Jagdish N. Bhagwati

Just how do—and should—economies respond to import competition? These papers, by several leading international trade theorists, are the first to approach this question from a full theoretical perspective, conceptualizing the issues raised by import competition so that empirical analysts can examine these issues and their phenomena with greater insight.

Trade and Employment in Developing Countries

1, Individual Studies
Edited by Anne O. Krueger, Hal B. Lary, Terry Monson, and Narongchai Akrasanee

Individual Studies, the first in a three-volume study, examines how trade policies in developing countries affect the level and composition of employment. In ten studies of countries with widely differing characteristics, the authors analyze the link between trade strategies and employment and explore the effects of import substitution policies as compared with policies that further the expansion of exports.
1980 x, 548 pages Cloth ISBN: 0-226-45492-4

2, Factor Supply and Substitution
Edited by Anne O. Krueger

The second work in this three-volume study, *Factor Supply and Substitution,* provides important new evidence of the effects of different trade policies and the factors that make up these policies, including exchange rates, wages, social insurance and other taxes, credit, and prices.
