Publication Date: 1968

Chapter Title: APPENDIX E DISCUSSION OF THE 1/1,000 SAMPLE OF THE U.S. CENSUS OF POPULATION AND HOUSING

Chapter Author: Victor R. Fuchs

Chapter URL: <http://www.nber.org/chapters/c1167>

Chapter pages in book: (p. 219 - 224)

## APPENDIX E

# DISCUSSION OF THE 1/1,000 SAMPLE OF THE U.S. CENSUS OF POPULATION AND HOUSING

The data of this sample are contained on 80-column punch cards and a magnetic tape with 120 alpha-numeric characters for each record. There is a separate card or tape record for each person included in the sample. The sample is self-weighting; universe totals may be obtained by adding three zeroes to the uninflated counts.

Each punch card contains information on the characteristics of a person, his household, family and subfamily, of the associated person, and of the housing unit in which he lives. Availability of the information in this form permits detailed cross-classification of persons by more than seventy economic, social, and demographic characteristics.<sup>1</sup>

In this study, persons employed in "agriculture, forestry, and fisheries" were excluded. All other employed persons were cross-classified (into 168 cells) by age, color (white and nonwhite), sex, and years of school completed.

<i>Age Classes</i>	<i>Years of School Completed</i>
14-19	Under 5
20-24	5-8
25-34	9-11
35-44	12
45-54	13-15
55-64	16 and over
65 and over	

Actual annual and hourly earnings and hours per person were computed for each of the 168 age, color, sex, and education cells. The hours

<sup>1</sup>For additional information concerning the sample, see U.S. Bureau of the Census, *U.S. Census of Population and Housing: 1960, 1/1,000, 1/10,000, Two National Samples of the Population of the United States, Description and Technical Documentation*, Washington (n.d.).

data are for a single week in April 1960. Earnings and number of weeks worked are for the entire year 1959. Annual hours were estimated for each individual, and then aggregated for the various cells and groups. The following midpoints were applied to the Census data.

Hours		Weeks	
<i>Class</i>	<i>Midpoint</i>	<i>Class</i>	<i>Midpoint</i>
1-14	7.5	Under 14	7.0
15-29	22.0	14-26	20.0
30-34	32.0	27-39	33.0
35-39	37.0	40-47	43.5
40	40.0	48-49	48.5
41-48	44.5	50-52	51.0
49-59	54.0		
60 and over	64.0		

Earnings	
<i>Class</i>	<i>Midpoint</i>
1-999	500
1,000-1,999	1,500
2,000-2,999	2,500
3,000-3,999	3,500
4,000-4,999	4,500
5,000-5,999	5,500
6,000-6,999	6,500
7,000-9,999	8,200
10,000-14,999	12,000
15,000-24,999	18,500
25,000 and over	40,000

Persons with no earnings in 1959 are excluded. This procedure leaves out persons who were only unpaid family workers in 1959, as well as new entrants to the labor force in 1960. Persons who had earnings in 1959 but left the labor force before April 1960 were also omitted. These exclusions are in addition to the exclusions of those unemployed or with a job but not at work in the survey week 1960. The latter two groups could not be included because no information concerning hours is available for them.

National average hourly earnings by color, age, sex, and education for nonagricultural employed persons are presented in Table E-1, and

Table E-2 indicates the sample sizes. Sample sizes are frequently small for 14-to-19-year olds and nonwhites, and the earnings figures for such cells are subject to considerable sampling error. The use of such figures to calculate "expected" and "standardized" earnings for groups, however, does not necessarily introduce any bias into the estimates, and, provided the sample size of the group is not small, the sampling errors of the individual color-age-sex-education cells are unimportant.

TABLE E-1  
Average Hourly Earnings of Nonagricultural Employed Persons,  
by Color, Age, Sex, and Education, 1959
