

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: Cyclical Fluctuations in the Exports of the United States since 1879

Volume Author/Editor: Ilse Mintz

Volume Publisher: NBER

Volume ISBN: 0-870-14577-4

Volume URL: <http://www.nber.org/books/mint67-1>

Publication Date: 1967

Chapter Title: Appendix A: The Export Data

Chapter Author: Ilse Mintz

Chapter URL: <http://www.nber.org/chapters/c1228>

Chapter pages in book: (p. 281 - 307)

Appendix A

The Export Data

1. Sources

Robert E. Lipsey, *Price and Quantity Trends in the Foreign Trade of the United States*, Princeton for NBER, 1963, pp. 188 ff. Used for all series in 1879–1923, except for total export value. The numbers of Lipsey's series used are: 207, 215, 217, 220, for 1879–1913; and 207, 212, 213, 215, 220, for 1920–23.

Dudley J. Cowden, *Measures of Exports of the United States*, New York, 1931, pp. 99–104. Used for all quantity and price series in 1924–28.

Department of Commerce, various publications, used for total export value, 1879–1923; for all value series, 1924–64; and for all quantity and price series, 1929–64. A few figures were supplied directly by the International Economic Analysis Division.

The following publications of the Department of Commerce were used:

Business Cycle Developments; Business Information Service; Foreign Commerce and Navigation of the United States, 1929, 1946; Foreign Trade of the United States, 1936–49; Monthly Summary of Commerce and Finance; Monthly Summary of Foreign Commerce of the United States; Overseas Business Reports; Quarterly Summary of Foreign Commerce of the United States; Statistical Supplement to the Survey of Current Business; Summary Reports, United States Foreign Trade, F.T. 900; Survey of Current Business; Trade Promotion Series; World Trade Information Service.

League of Nations, *Monthly Bulletins of Statistics* was used for the ratio of dollars of 1930 parity to current dollars, 1930–38.

2. Notes on the Source Series

As a rule, the export series represent exports of U.S. merchandise valued at current prices at the place of embarkation. The series used for total export value, however, represents general exports, i.e., it

includes re-exports of foreign merchandise. This inclusion is one reason why total export value is somewhat larger than the sum of the values of the commodity classes. In the years 1879–1923 a second factor contributes to this discrepancy: “miscellaneous articles, not elsewhere specified,” are included in total export value, but are not assigned to any of the commodity classes. In the later years, this group is included in the class “finished manufactures.”

Shipments under the Military Security Program are excluded beginning with the third quarter of 1950, the date for which separate data for such shipments are first available. Beginning with the first quarter of 1952 total export value and quantity, and finished manufactures export value and quantity, excluding military shipments, are published by the Department of Commerce. The adjustment was carried back by us to the third quarter of 1950.¹ Price series are not corrected for military shipments since the change in the series would be so slight that a separate index was not found warranted by the Department of Commerce.

3. Our Adjustments of the Source Series

The Department of Commerce classes “crude foods” and “manufactured foods” are combined into one class “foods.” Because of their small value in early years, semimanufactures are combined with crude materials, 1879–1913.

Price and quantity indexes, 1920–23, have been shifted to the base 1923–25 and spliced to the Cowden series for 1924–28. The Commerce indexes for 1929–38 have also been spliced to the Cowden series.

For the years 1933–38 current dollars have been converted into “dollars of 1930 parity” or predevaluation dollars. This was done for comparability to world trade, which was measured in such dollars until World War II. This adjustment applies to all value and price series.

Private relief shipments of food were shifted by the Department of Commerce from finished manufactures to foods beginning with the first quarter of 1954. We made the corresponding shift for the period from the first quarter of 1945 to the fourth quarter of 1953, adjusting values and quantities of finished manufactures and of foods. The price indexes are not affected by this shift.

¹ Data supplied to us directly by the International Economic Analysis Division of the Department of Commerce were used for the adjustment of the quantity series; published data for the value series.

Exports by rail are omitted from the source series, 1879-93. Matthew Simon's adjustment for this omission (*Trends in the American Economy in the Nineteenth Century*, Princeton for NBER, 1960), was not used since it applies to total export value only.

Fisher "ideal" indexes are used throughout. Those constructed by Lipsey have fixed bases for periods of ten to fifteen years, those from Cowden and the Department of Commerce are chain indexes.

Except for total export value since 1948, which is adjusted by the Department of Commerce, all seasonal adjustments have been made by the National Bureau of Economic Research. An implicit seasonal was used only for food exports before 1914 and after 1945. In all other instances the implicit seasonal proved unsatisfactory and value, quantity, and price were separately adjusted.

In the Appendix tables and in the charts the latest revisions of the data and a seasonal adjustment based on the latest data were used. All other tables and the text for 1945-63 are based on an earlier version of the series. The differences between the two versions of the series are slight but a few turning points are shifted by the new seasonal adjustment as shown by the notation (P) and (T), on Tables A-1, A-2, A-3.
