Preface

This book is a compilation of some of the papers presented at a conference sponsored jointly by the Escuela de Administracion de Negocios para Graduados (ESAN) in Lima and the National Bureau of Economic Research. The conference, entitled "Commodity Markets, Models and Policies in Latin America," was held at ESAN in Lima from May 11-13, 1978. The participants consisted of economists, planners, and policymakers from the United States and Latin America interested in commodity models and their use in planning. Unfortunately, not all of the papers presented in the conference could be included in this volume. Only papers dealing with modeling methodologies, particularly those related directly to Latin America's primary commodities, are included.

We thank all of the participants in the conference, and most particularly those who presented papers and the discussants and members of ESAN, especially Dean Lander Pacora Coupen, Tulio Camminati, Nissim Alcabes, Fernando Robles, Peter Wosner, and Alberto Zaqater.

The financial support of IBM World Trade Company to the National Bureau of Economic Research and the financial resources made available by the Escuela de Administracion para Graduados that made this conference possible are deeply appreciated.
