

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: Signals of Recession and Recovery: An Experiment with Monthly Reporting

Volume Author/Editor: Julius Shiskin

Volume Publisher: UMI

Volume URL: <http://www.nber.org/books/shis61-1>

Publication Date: 1961

Chapter Title: Appendix C Data and Sources for Business Cycle Series and Diffusion Indexes

Chapter Author: Julius Shiskin

Chapter URL: <http://www.nber.org/chapters/c2301>

Chapter pages in book: (p. 149 - 191)

87. U.S. general imports, total (M)	+ 1	n.c.	+ 0	n.c.	+ 0	n.c.	+ 10
88. Merchandise trade balance (M) ^b	n.c.	- 3	0	- 8	- 3	+ 2	- 2
89. Excess of receipts or payments in U.S. balance of payments (Q)	n.c.	- 3	- 20	- 12	n.c.	+ 2	- 16
94. Index of construc. contracts, total value, Dodge (M)	n.a.	n.c.	- 5	- 3	+ 10	n.c.	+ 16
	- 12	n.c.	- 4	- 23	- 9	n.c.	- 2

^aNo timing comparisons have been made for the seven foreign industrial production indexes (series 121-128); the three Defense Department series (90-92) have been omitted because of their brevity and the irregularity of their movements.
^bSpecific cycle troughs are compared with business cycle peaks and the irregularity of their movements.
^cSeries included in the National Bureau's 1960 list of 26 indicators.
n.c. = no corresponding turn. n.a. = not available.

Appendix C

Data and Sources for Business Cycle Series and Diffusion Indexes

The original and seasonally adjusted observations, seasonal factors, and sources of current data for each of the U.S. business cycle series are given in Table C-1 for January 1958 through June 1961. The historical data for most of these series are given in *Business Cycle Indicators*, Volume II, together with a description of their content. The series for which historical data are not provided there (17, 20, 25-27, 29-32, 57, and 81-94) can be obtained from the sources cited in Table C-1. In certain cases, revised data have been prepared since *Business Cycle Indicators* went to press; these instances are indicated in the source notes. The numbers used to identify the series in Volume II are shown in parentheses at the end of the source notes here.

Most of the series are seasonally adjusted by the compiling agencies. For series 2-5, 9, 13-15, 18, 30, 45, 55, 66, 81-83, and 90-92, seasonal factors are not provided by the sources cited but are computed by the Bureau of the Census or the National Bureau. The seasonal adjustment of some series (6, 7, 10-12, 16, 17, 20, 21, 24, 25, 29, 31, 41, 43, 44, 46, 47, 49, 50, 52-54, 57, 61-65, 84, 85, 88, and 89) is accomplished by adjusting components and summing the adjusted components. The seasonal factors for these series are not shown. The implicit seasonal factors can readily be derived by dividing the raw by the seasonally adjusted data. For dates when current figures first become available each month or quarter, see Table 19 in the text. Asterisks identify series included in the National Bureau 1960 list of 26 indicators.

The amplitude-adjusted general indexes (Table C-2), the adjusted rates of change (Table C-3), and the comprehensive diffusion indexes (Table C-4) are given for 1948 through June 1961, and the individual diffusion indexes (Table C-5) for January 1958 through June 1961.

All the diffusion indexes given here (Tables C-4, C-5, and C-6) are expressed in terms of the percentage of components expanding

(rising) during designated intervals, with components showing no change counted as one-half expanding and one-half contracting. The percentages are "centered," i.e., recorded at the middle of the interval or span. When the span covers an odd number of months, the percentage is recorded in the second of the two central months. For example, if the span is one month, the January to February result is recorded in February. If the span is three months, the November to February result is recorded in January. If the span is one quarter, the first to second quarter comparison is recorded in the first month of the second quarter, etc. If the span is four quarters, the result based on the change from the first quarter of one year to the first quarter of the next is recorded in the middle month of the third quarter of the initial year, and so on.

Each rate of change series given in Table C-3 is standardized so that its average (without regard to sign) equals one for the period 1948-60. Amplitude-adjusted general indexes derived from these rates were used in preparing Chart 6. The general indexes in Chart 3 cover longer periods and are standardized so that the average month-to-month change (without regard to sign) for each index is equal to one for the full period covered. Because of differences in the periods covered, the figures for the general indexes in Chart 3 and Chart 6 differ. For further explanations, see Appendix A.

The figures shown here were the latest available at the time this paper went to press. Because of recent revisions, these figures may differ somewhat from those used in some of the analytical text tables.

1961	123.7	124.0	124.1	123.0	121.3	120.9						

SOURCE: For wage and salary component, *Survey of Current Business*; advance release in OBE, *Business News Reports, Personal Income*; for output component, *Federal Reserve Bulletin*; advance release in FRB, *Business Indexes* (No. G.6). The method of computing this series has been changed since the publication of *Business Cycle Indicators*, Volume II. Wage and salary disbursements in manufacturing (\$ billion, seasonally adjusted, annual rate) are converted to 1947-49 = 100 by dividing by \$44.3 billion, which is the 1947-49 average, and divided by the FRB index of manufacturing production, 1947-49 = 100, seasonally adjusted, to obtain wage and salary cost per unit of output (23.0).

*63. Labor Cost per Dollar of Real GNP (dollars)												
RAW DATA NOT AVAILABLE												
SEASONALLY ADJUSTED DATA												
1958		.642			.641		.643				.638	
1959		.641			.645		.658				.656	
1960		.658			.664		.672				.671	
1961		.675			.674							

SOURCE: *Survey of Current Business*; advance release in OBE, *National Income and Product* (quarterly). The figures represent total compensation of employees in current dollars divided by GNP in 1954 dollars, both series seasonally adjusted. Figures have been revised somewhat since publication of *Business Cycle Indicators*, Volume II (23.2).
