Volume Title: Imports of Manufactures from Less Developed Countries

Volume Author/Editor: Hal B. Lary

Volume Publisher: NBER

Volume ISBN: 0-870-14485-5

Volume URL: <http://www.nber.org/books/lary68-1>

Publication Date: 1968

Chapter Title: Appendix D: Statistics of Imports of Labor-Intensive Manufactures by Developed Countries, 1964 and 1965

Chapter Author: Hal B. Lary

Chapter URL: <http://www.nber.org/chapters/c4985>

Chapter pages in book: (p. 215 - 273)

APPENDIX D

STATISTICS OF IMPORTS OF LABOR-INTENSIVE MANUFACTURES BY DEVELOPED COUNTRIES, 1964 AND 1965

Tables D-1, D-2, D-3, and D-4 show additional details, beyond those given in Chapter 4, of imports of labor-intensive manufactures by developed from less developed countries in 1964 and 1965. The data have been especially compiled for this study by the United Nations Statistical Office on the basis of the import statistics submitted by individual developed countries. The figures received from the U.N. Statistical Office have been adjusted in some cases, as noted below, to delete elements which, at least for purposes of a study such as the present one, must be deemed irrelevant and inaccurate. The c.i.f./f.o.b. adjustment (see Appendix E) has not been attempted in this detail, however, and the figures are therefore a mixture of the f.o.b. values reported by the United States, Canada, and Australia with the c.i.f. values reported by all other developed countries.

These four main tables and the subgroups into which they are divided correspond to the main groups and subgroups distinguished in Table C-1, and their composition in terms of the Standard International Trade Classification is specified in that table.

The sixteen countries here treated as "developed" correspond to those included in "Economic Class I" in the trade statistics publications of the United Nations, except that the Union of South Africa and Portugal have been omitted (Portugal being excluded also from the subgroup EFTA and, instead, included with Southern Europe under "other low-wage countries" among the sources of imports specified in the tables). All sixteen countries are shown separately in each of the tables.

The composition of the "less developed countries" in these tables corresponds to that of "Economic Class II" in the trade statistics publications of the United Nations. Generally speaking, the country subgroups are also the same as in the U.N. publications. The principal exception is that the U.N.'s group "other countries, n.e.s." (which, as far as the trade examined here is concerned, is chiefly accounted for by the islands of the Caribbean) is combined with Latin America and called "Western Hemisphere" in the present tables. Only the most important countries of origin are individually shown in each table, and those chosen vary from one table to another depending on the products covered. This has the consequence that the residual regional country groups ("Other Far East," etc.) vary in composition from one table to another depending on which countries are individually specified. Similarly, the final residual group "Other less developed countries" varies according to the individual countries and country groups separately listed.

The tables also show imports from "other low-wage countries," comprising Japan and Southern Europe other than Italy (i.e., Portugal, Spain, Yugoslavia, Greece, and Turkey).

Adjustments to Delete Irrelevant Elements

The statistics in several of the tables in this appendix have had to be adjusted in an effort to eliminate elements which seem to represent merchandise returned to the importing country or, in any event, are clearly not the product of the less developed country listed as the source of the imports. An example of this kind of statistic is the United Kingdom's reported imports of aircraft (SITC 734) and aircraft engines (SITC 7114), totaling \$25.2 million in 1965 from a long list of less developed countries. It may be safely assumed that these are items of British origin brought back for repair. The United Kingdom and, to a smaller extent, various other developed countries appear to give the same kind of treatment to construction equipment and various other capital items brought back after use abroad. It is apparent from the origins indicated in the import returns that much of this equipment has been used in petroleum exploration and exploitation in the Middle East and other oil-producing areas. The aircraft, aircraft engines, and various other items are not of immediate concern here, being eliminated in any event from the statistics as capital-intensive. There are, however, a number of other items which are at least "marginally labor-intensive" (see Chapter 4) and which give rise to the same sort of doubt as that

indicated. The method followed here, a second- or third-best solution, is to eliminate completely in such cases all imports shown as coming from the Middle East other than Israel, from "Other Africa," and from "other countries, n.e.s." but to give the benefit of the doubt to imports listed as coming from Israel, the Far East, and Latin America. The items so treated pertain to two of the subgroups in Table D-2 and consist of the following SITC numbers:

- 2(j) Electrical apparatus and appliances: 722, 7249, 7294, 7299
- 2(k) Nonelectrical machinery and equipment: 7121, 7122, 7125, 7129, 7142, 7143, 7149, 7171, 7183, 7192, 7196, 7198, 71991, 71992

Minor Discrepancies in the Tables

Summation of the U.N. tabulations for individual SITC items to obtain the product subgroups and main groups presented in the following tables has the consequence of accumulating minor discrepancies between (a) the sum of the figures for individual importing countries in a given column and (b) the subtotals for EFTA and the EEC as well as the grand totals for all developed countries shown in the same column. (These discrepancies arise because, in the detailed tabulations, amounts of less than \$1,000 from any one source were omitted from the figures listed for individual importing countries but were retained for addition into the combined subtotals and totals.) The differences are positive (excess of b over a) in columns giving imports from individual less developed countries, but may be negative in columns for residual country groups (such as "Other Far East" and "Other less developed countries") where entries for the latter have been obtained by difference.
