

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: Mechanization in Industry

Volume Author/Editor: Harry Jerome

Volume Publisher: NBER

Volume ISBN: 0-87014-026-4

Volume URL: <http://www.nber.org/books/jero34-1>

Publication Date: 1934

Chapter Title: Appendix A: Machine Sales and Other Measures of Mechanization, by Years

Chapter Author: Harry Jerome

Chapter URL: <http://www.nber.org/chapters/c5250>

Chapter pages in book: (p. 419 - 436)

APPENDIX A

MACHINE SALES AND OTHER
MEASURES OF MECHANIZATION,
BY YEARS

(For similar data, see also text tables 5, 6, 7, 8 and 13)

TABLE 36

MECHANIZATION IN INDUSTRY

TABLE 36 (cont.)
IRON AND STEEL: 1911-31

MACHINE CASTING OF PIG IRON

YEAR	NUMBER OF MACHINES INSTALLED BY LEADING MANU- FACTURERS ¹	PERCENTAGE OF OUT- PUT MACHINE CAST			NEW IN- STALLATIONS OF ELECTRIC MAIN ROLL DRIVES (HORSE- POWER) ⁵	GROWTH OF THE CONTINUOUS PROCESS ⁶
		ALL PIG MERCHANT IRON NOT BLAST DELIVERED MOLTEN ³	OF STACKS NOT MECHANI- CALLY CHARGED ⁴	PERCENTAGE CHARGED ⁴		
1927	7	81	85	91	134,150	87.8
1928	7	7	85	7	188,150	89.5
1929	7	7	89	7	890,600	91.1
1930	7	7	91	7	146,740	87.5
1931	7	7	93	7	95,825	91.7

¹ Based on U. S. *Census of Manufactures* for 1914 and 1919, and lists of installations by manufacturers. The installations in the successive years 1895-1910 were: 1, 1, 3, 3, 4, 13, 7, 6, 12, 3, 4, 10, 6, 7, 10, 7. The average number of strands per listed installation varied from 2.0 to 2.4 in the period 1898-1916, and from 1.7 to 1.9 in the period 1917-26.

² Based upon survey reported in Bul. 474 (Ref. 37). The list of plants included is not completely identical from year to year. In 1890 no pig machines were used.

³ Computed from data in *Statistical Reports* of the American Iron and Steel Institute. The percentage was zero in 1890; 40 in 1904.

⁴ Same source of information as ².

⁵ Computed from lists published in January issues, 1926-32, of *Iron and Steel Engineer*. Corresponding figures for the successive years 1905-10 are: 10,600, 25,640, 26,600, 8,050, 27,450, 30,700.

⁶ The measure of growth utilized is the percentage of steel-making pig iron used by makers which is cast in molten condition. Computed from *Statistical Reports* of the American Iron and Steel Institute.

⁷ No data available.

SALES BY YEARS

1929	148	112	52	187	19,316	13,488	20	101	99	99	99	101

¹ Obtained by converting to 1925 base an index on 1922-24 base given in the 1932 *Annual Supplement, Survey of Current Business*, p. 218.

² The foundry molding machine data represent sales of single manufacturers, the hand series being of the plain squeezer type, for use on the lighter classes of work; the power series, the squeezer and jolt-squeezer types operated by compressed air.

³ Index of number of machines, based on shipments, 1914-19, and new orders, 1919-28. The data were compiled by the National Machine Tool Builders' Association, and are published in the *Survey of Current Business*. The shipments were 'reported by 29 firms representing about 20 per cent of the membership and believed to be fairly typical of the industry, as standard machines and the larger firms are represented'. The data on 'new orders' include quantity reports "from between 50 and 60 firms, said to represent about one-third of the industry". We have spliced the two index numbers at 1919 and converted the resulting series to a 1925 base.

⁴ From 1932 *Annual Supplement, Survey of Current Business*, pp. 222-3; originally compiled by the Association of Manufacturers of Wood Working Machinery from reports of its members, averaging about 23 each month and varying from 20 to 27. The total shipments for 1925 represented 48 per cent of the value of wood-working machinery produced that year, according to the *Census of Manufactures*.

⁵ Data from Barber-Colman Company, the sole manufacturers of these three types. Sales of the warp-tying machine in the successive years 1904-13 were: 24, 31, 64, 72, 21, 35, 27, 21, 44 and 40.

⁶ No data for these years.

⁷ No sales prior to 1917.

1929	88 ¹⁶	29	158	134	191	14	102	14				

⁸ Each series in this division is based on the sales of only one or two establishments.

⁹ The comparable figures for 1908-13 for Series A are: 3, 5, 7, 7, 10 and 15.

¹⁰ Series B, C and D represent, respectively, a type of heavy crushing machinery, sand mixers, and continuous filtering systems.

¹¹ Series E, F, G and H represent, respectively, filling and capping machines for milk bottles, labeling and casing machines for cylindrical containers, bag-filling machines, and butter-wrapping and cartoning machines.

¹² No sales made prior to the first year for which data are given.

¹³ Sales began before 1914 but data for the early years are not available.

¹⁴ Data not available for these years.

¹⁵ Estimated from value of machines of this type as reported in *Census of Manufactures*.

1929	35.1	126	42	22		22	

¹⁶ Computed from total production of cigars weighing more than 3 pounds per thousand and estimated production of machine-made cigars (Ref. 47). The ratio was 47.0 in 1930.

¹⁷ Less than one-tenth of one per cent.

¹⁸ Five series. Sales of these types began before 1914.

¹⁹ Few or no sales made prior to 1922.

²⁰ The number of machines in use as reported by the union, which had practically complete control over these machines. Data for 1897-1924 from Barnett (Ref. 3, p. 110); for 1925 and 1927 from annual proceedings of the Glass Bottle Blowers Association. We are informed by the secretary of the Association that by 1929 there were none in use (letter to the writer, January 23, 1934). See Ch. III, especially Table 5, for other data pertaining to machines in the glass industries.

²¹ Barnett (Ref. 3), p. 85. Estimates are for production years 1917, 1922-23 and 1924-25, respectively.

²² Data not available for these years.

¹ Based upon data contained in (1) U. S. Bureau of Public Roads, Circular 212, *The Manufacture and Sale of Farm Equipment in 1920*; (2) U. S. Bureau of the Census, *Census of Manufactures, 1921*, and annual bulletins entitled *Manufacture and Sale of Farm Equipment, 1922-29*, inclusive. Although the number of reporting concerns varies somewhat, it is believed that each year all but a small part of the total production is included.

² Not including garden tractors and motor cultivators.

³ Not including tracklaying attachments (used to convert the wheel type to the tracklaying type). In 1926, 2,234 were sold in the United States.

⁴ No data available.

⁵ These figures are the number manufactured, rather than sold, and probably exceed the domestic sales.

⁶ Includes the garden type tractor.

⁷ Includes the garden type tractor and motor cultivators.

⁸ Data for domestic sales not available.

⁹ All power driven.

1929	14,731	137	75.4	1.6	2.7	3.8	3.6	

¹ Data for undercutting machines and stripping operations from *Mineral Resources* (Ref. 32), Pt. II: 1923, p. 582; 1927, pp. 374-5; 1929, pp. 751-5.

² Computed from coal production and tonnage of coal mechanically loaded as reported in *Mineral Resources of the United States* (Ref. 32) 1929, II, 701, 758-9. In 1930 the percentage mechanically loaded was 5.0; in 1931, 5.9 (computed from data in U. S. Bureau of Mines *Coal in 1931*), pp. 427, 451.

Mechanically loaded coal includes that "loaded by mobile machines, scrapers, and duckbills and other self-loading conveyors" but not coal loaded by hand-fed pit-car loaders and other hand-loaded conveyors or by power shovels in strip pits.

³ Percentage of fresh mined coal.

⁴ No data available.

1928	6	82	1,490	509	6	7		
1929	6	94	1,716	600	6	9		

¹ Power shovels of contractors' sizes, $\frac{1}{2}$ to $1\frac{3}{4}$ yd., of steam, gasoline and electric types, sold by a group of manufacturers including 3 firms in 1914; 5 in 1915; 6 in 1921; 8 in 1922; and 10 in 1924. In each instance the increase in numbers represents establishments just beginning the manufacture of this type of shovels in the given year. The sales in earlier years are:

1900	14	1904	45	1908	69	1912	195
1901	16	1905	49	1909	95	1913	165
1902	27	1906	45	1910	105		
1903	35	1907	90	1911	147		

² Data from manufacturers of narrow trenchers.

1929	4,014	26.0	4,119	10

³ From 1919 through 1922 compiled by the Stoker Manufacturers' Association; thereafter by the Bureau of the Census, U. S. Department of Commerce, and published in the *Survey of Current Business* and mimeographed press releases. In the latter the data are classified as installed under fire-tube or water-tube boilers. The series represents practically the entire industry, changes in the number of plants being due, apparently, to consolidations. The 1929 compilations cover ten plants.

⁴ Data from two manufacturers.

⁵ Six series covering metal annealing furnaces and clay-burning kilns of the continuous tunnel type and automatic drying systems for clay products.

⁶ Comparable data not available for these years.

⁷ The telephone data cover Bell-owned stations, as of the close of the specified year, and are furnished by the American Telephone and Telegraph Company.

⁸ From three manufacturers. The exact distribution by years of about 600

SALES BY YEARS

431

cars sold, 1914-17, is an estimate. A relatively small number of cars used for inspection purposes is included. Comparable data for 1911, 1912 and 1913 are 600, 900 and 2,294 respectively.

⁹ Two types.

¹⁰ No data available.

Floor polishers	3	3	50	90	47	49	53	33
Dishwashers	3	3	4	7	9	10	12	15

¹ Except where otherwise stated, the estimates in this table are compiled from the issues of *Electrical World* for March 1, 1924, p. 461, and April 2, 1927, p. 736, and of *Electrical Merchandising* for January 1927, p. 77; 1928, p. 70; 1929, p. 62; 1930, p. 52; and 1931, p. 22. The data for vacuum cleaners were originally compiled by the Vacuum Cleaner Manufacturers' Association.

² According to a letter from the American Washing Machine Manufacturers' Association, February 23, 1928, the sales of the electric washing machine industry in the United States and Canada were 566,000 in 1920; 289,000 in 1921; and 423,000 in 1922. They also report the number of engine-driven washing machines (in thousands) as follows:

1920	58	1922	20	1924	17	1926	67
1921	16	1923	20	1925	36	1927	85

³ No data available.

TABLE 44

¹ Survey of Current Business, June 1927, p. 22, and 1932 Annual Supplement, pp. 274-5. The figures for 1922-29 include foreign assemblies.

² Registrations from Ref. 19, 1931, p. 16.

³ Data for 1914-19 are rough estimates based on reports from establishments producing about 50 per cent of the total number in 1920. It is assumed that the fraction produced by these establishments decreased gradually from 1914 to 1920. Data for 1920-24, from the Industrial Truck Association; for subsequent years, from press releases of the U. S. Department of Commerce, based upon reports from the 9 to 11 leading manufacturers. Similar estimates for the successive years 1906-13 are: 5, 10, 10, 25, 45, 75, 130, 200.

⁴ Three models, comprising the major portion of the industry. These machines pick up loose material such as sand, gravel or snow and convey it to the box of wagon or truck.

⁵ Four models, gasoline and electric types. The total number sold to 1929, inclusive, was 1,151.

1928	3,102	12,290	14,619	1,344	267	2,720	2,720	806	806	129

¹ Compiled by the Electric Hoist Manufacturers' Association from the reports of nine firms. Data for 1925-30 in *Survey of Current Business*, August 1929, p. 42, and February 1931, p. 26. Issues of the *Survey* since March 1931 have carried revised and larger figures for this series, without explanation of the revision. We have used the un-revised figures as probably more comparable with the data for the years prior to 1925.

² Compiled by the Electric Overhead Crane Institute, from reports of eleven manufacturers, estimated to cover 98 per cent of the output of electric overhead cranes for factories, etc." Published in *Survey of Current Business*, 435

1932 Annual Supplement, pp. 218-19.

^a Shipments as reported to the U. S. Department of Commerce by ten firms, comprising practically the entire industry. Mimeographed press releases, March 2, 1929 and January 17, 1930. Number of locomotives also given. In 1929, there were shipped 56 industrial locomotives of the trolley type and 13 storage battery type; 468 mining locomotives of trolley type and 288 storage battery.

⁴ Based on reports from a small number of firms, whose total installations ranged from \$1,500,000 to \$2,000,000 in the peak years. The effect of changes in the list of reporting firms has been eliminated so far as possible by constructing the index from year-to-year percentage changes in installations of identical firms.
