

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: Residential Real Estate, Its Economic Position as Shown by Values, Rents, Family Incomes, Financing, and Construction, Together with Estimates for All Real Estate

Volume Author/Editor: David L. Wickens

Volume Publisher: NBER

Volume ISBN: 0-87014-037-X

Volume URL: <http://www.nber.org/books/wick41-1>

Publication Date: 1941

Chapter Title: Family Income

Chapter Author: David L. Wickens

Chapter URL: <http://www.nber.org/chapters/c5647>

Chapter pages in book: (p. 145 - 200)

## SECTION C

### *Family Income*

The 13 tables in section C are discussed in general in Part Two, Chapter III. Table C 1 is a simple summary of total owner-occupant and tenant families by 39 income groups for 1929 and 1933 for the 33 cities covered in the detailed tabulations in Table C 3. Table C 2 presents a similar summary for the income reported in Table C 3 for each city separately. Table C 3 gives average annual rent and income for 1929 and 1933 and the percentage relationship between them.

In all the tables, because of rounding in editing the schedules, average family income appears in even hundreds of dollars for the first 17 of the 39 income groups above "no income." This rounding is also responsible for the unevenness of the successive income class intervals (see footnote to Table C 1).

Tables C 4-13 show results of combining the two methods of enumeration. Table C 4 presents average annual income for 1929, 1932, and 1933 as reported in 1934 by families of the respective tenures. The figures for 1929 and 1932 are therefore retrospective reporting. Covering only those families reporting as such in 1934 the reports exclude the incomes of those families

which may have existed in 1929-32 but not at the date of the survey in 1934. To obtain geographic division and all city totals in Tables C 4-13, the number of dwelling units or families of the appropriate tenure as shown by the Federal Real Property Inventory were uniformly used as weights. The figures in Table C 13 are simple averages of the percentages reported as the proportion of full time that the head of the family was employed.

Many of the schedules were rejected in the course of editing the field returns, especially schedules returned by mail. An examination of these rejected schedules shows that they had two biases as compared with the used schedules: the first was a concentration in the lowest income groups; the second, a smaller concentration in the higher income groups. When all rejected schedules are combined with the used schedules, however, the pattern of the distribution by income groups changes little in any of the 52 cities by each tenure and both canvasses. For owner-occupant families the concentration in the upper groups was more pronounced than for tenants.

TABLE C I

Owner-occupant and Tenant Families, Number and Percentage Distribution by 39 Income Groups, 33 Cities combined, 1929 and 1933

Annual income group <sup>1</sup>	← T O T A L →				← O W N E R - O C C U P A N T →				← T E N A N T →			
	1929		1933		1929		1933		1929		1933

Source: *Financial Survey of Urban Housing* (special tabulation). Based on empirical data obtained by personal enumeration and mail return. Distributions uncorrected for non-representativeness of size of population groups or for differences in size of samples. Total is simple addition of two tenures. Percentage not shown if less than one-tenth of one per cent.

<sup>1</sup> This table was prepared from punch cards on which income was punched only to the nearest hundred dollars. In rounding figures ending in 50 the fairly common rule of rounding to the nearest even hundred dollars was followed. Thus both \$150 and \$250 were rounded to \$200; \$350 and \$450 to \$400, and so on. For this reason successive class intervals are in many instances uneven: some begin with amounts ending in 51 and others with amounts ending in 50; and some end with amounts ending in 49 and others with amounts ending in 50.

TABLE C 2

Owner-occupant and Tenant Families, Annual Family Income, Amount and Percentage Distribution by 39<sup>2</sup> Income Groups, 33 Cities combined, 1929 and 1933

Source: *Financial Survey of Urban Housing*. Based on number of families reporting as shown in Table C 6. Percentages derived by dividing average annual rent by average annual income as shown in this table and in Table C 7. Geographic division and 52-city percentages thus automatically weighted. Average or percentage not shown for fewer than 3 reports.

<sup>1</sup>Geographic division and 52-city averages weighted by number of rental units in each city (RPI).

Source: *Financial Survey of Urban Housing*. Based on number of reports and average annual rent by income groups as shown in Tables C 8 and 9. Reports on number of rooms per dwelling unit slightly fewer than the number reporting annual rent. The average annual rent per room shown in this table computed for each income group by dividing average annual rent derived from the larger sample by average number of rooms derived from the smaller sample. Average not shown for fewer than 3 reports.

\*Metropolitan district.

<sup>1</sup>Geographic division and 52-city averages weighted by number of rental units in each city (RPI).

TABLE C II
