## Books of Related Interest

### **Import Competition and Response**

Edited by Jagdish N. Bhagwati

Just how do—and should—economies respond to import competition? These papers, by several leading international trade theorists, are the first to approach these questions from a full theoretical perspective, conceptualizing the issues raised by import competition so that empirical analysts can examine these issues and their phenomena with greater insight.

1982 x, 410 p. Cloth ISBN: 0-226-04538-2 Paper ISBN: 0-226-04539-0

### **Trade and Employment in Developing Countries**

#### **1. Individual Studies**

Edited by Anne O. Krueger, Hal B. Lary,  
Terry Monson, and Narongchai Akrasanee

*Individual Studies*, the first in a three-volume study, examines how trade policies in developing countries affect the level and composition of employment. In ten studies of countries with widely differing characteristics, the authors analyze the link between trade strategies and employment and explore the effects of import substitution policies as compared with policies that further the expansion of exports.

1980 x, 548 p. Cloth ISBN: 0-226-45492-4

#### **2. Factor Supply and Substitution**

Edited by Anne O. Krueger

The second work in this three-volume study, *Factor Supply and Substitution*, provides important new evidence on the effects of different trade policies and the factors that make up these policies, including exchange rates, wages, social insurance and other taxes, credit, and prices.

1982 282 p. Cloth ISBN: 0-226-45493-2

#### **3. Synthesis and Conclusions**

Anne O. Krueger

In *Synthesis and Conclusions*, the final volume of this NBER project on alternative trade strategies and employment in developing countries, Anne O. Krueger, the project director, brings together the theory underlying the trade strategies-employment relationship and the empirical evidence from the project.

1983 232 p. Cloth ISBN: 0-226-45494-0
