The Youth Labor Market Problem

Its Nature, Causes, and Consequences

Edited by RICHARD B. FREEMAN *and* DAVID A. WISE

"This major and timely volume . . . brings together, in a systematic and well organized way, a massive amount of analysis, information, and research thoughts and findings on a problem of crucial importance to labor economists. . . . For anyone interested in the employment problems of young people, this volume is essential reading."

—C. Glyn Williams, *The Wall Street Review of Books*

An NBER Conference Report

1982 608 pages Cloth ISBN: 0-226-26161-1

Social Experimentation

Edited by JERRY A. HAUSMAN *and* DAVID A. WISE

Since 1970 the United States government has spent over half a billion dollars on social experiments intended to assess the effect of potential tax policies, health insurance plans, housing subsidies, and other programs. The contributors to this volume consider, among other questions, whether these experiments were worth their cost, whether they revealed information that could not have been learned by other means, and whether the experiments could have been better designed and analyzed.

An NBER Conference Report

1985 viii, 292 pages Cloth ISBN: 0-226-31940-7

Studies in Labor Markets

Edited by SHERWIN ROSEN

The papers in this book deal with four interrelated themes: labor mobility, job turnover, and life-cycle dynamics; the analysis of unemployment compensation and employment policy; labor market discrimination; and labor market information and investment. The papers combine the most sophisticated theory and econometric methods with high-quality data.
