

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: The Ownership Income of Management

Volume Author/Editor: Wilbur G. Lewellen

Volume Publisher: NBER

Volume ISBN: 0-870-14222-4

Volume URL: <http://www.nber.org/books/lewe71-1>

Publication Date: 1971

Chapter Title: Acknowledgments

Chapter Author: Wilbur G. Lewellen

Chapter URL: <http://www.nber.org/chapters/c6437>

Chapter pages in book: (p. -1 - 0)

## *ACKNOWLEDGMENTS*

THE RESEARCH EFFORT described on the following pages has benefited greatly from the generous assistance of a number of individuals and organizations during the past several years. A particular debt is owed to Professor Daniel M. Holland of the Sloan School of Management at the Massachusetts Institute of Technology for his early and continuing help in formulating both objectives and strategy. The counsel of my colleagues at the Krannert Graduate School of Industrial Administration at Purdue University, Professors Robert W. Johnson and Blaine Huntsman, was invaluable throughout the investigation, as was the advice and encouragement of Professor John Lintner of the Harvard Graduate School of Business Administration. Conversations at various stages with V. Henry Rothschild II of New York City, Winthrop T. Lewis of the John Hancock Mutual Life Insurance Company in Boston, and Raymond J. Sullivan of the Public Reference Section of the Securities and Exchange Commission in Washington aided materially in refining the analysis and securing the necessary background information for its execution. Direct assistance with data collection and computer programming was provided by James Bauer of the Krannert School and Ira Miller of the Sloan School, both of whom performed in the capacity of research assistants at a level of competence substantially in excess of any reasonable expectation.

The staff of the National Bureau played a similarly vital role. Geoffrey Moore's initial support for the concept of the study was a pivotal factor, while the effective administration of the subsequent undertaking by Victor Fuchs smoothed the author's path considerably. Dr. Fuchs' suggestions ably complemented the incisive commentary of the Bureau's staff reading committee, comprised of William Landes, Richard Ruggles, and Neil Wallace, and the perceptive critique by Erwin D. Canham, George Cline Smith, and Robert J. Lampman of

the Directors' reading committee. Additional contributions and suggestions were made by Eli Goldston and Emilio G. Collado. Special thanks is due also to Professor Robert Eisner of Northwestern University, whose very generous and very thorough review of the manuscript in its latter stages gave rise to a number of improvements in both style and content. Ruth Ridler's editorial expertise supplied the finishing touches.

The Bureau's financial resources were augmented with funds provided by the Purdue Research Foundation, the Krannert School, the Ford Foundation's Grant for Research in Business Finance to the Sloan School at M.I.T., and the Division of Research of the Harvard Business School. Dean John S. Day of Purdue, Dean William F. Pounds of M.I.T., and Dean Lawrence E. Fouraker of Harvard were especially generous in their support. The cooperation of the staff of Baker Library at Harvard also deserves prominent mention not only for permitting access to that institution's extensive collection of corporation records, but for making the actual process of data compilation as pleasant as any such task could be. The computations were performed at the computer centers of Purdue, M.I.T., and Harvard.

It must be emphasized, however, that the massive good fortune associated with being able to call upon the range of talents indicated does not necessarily imply a corresponding ability to translate that assistance into an effective end product. The analytical and expositional shortcomings which remain are unambiguously the responsibility of the author.

W. G. L.
