

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: The Structure of Postwar Prices

Volume Author/Editor: Frederick C. Mills

Volume Publisher: UMI

Volume ISBN: 0-87014-342-5

Volume URL: <http://www.nber.org/books/mill48-1>

Publication Date: 1948

Chapter Title: Comment on "The Structure of Postwar Prices" and appendices

Chapter Author: D. H. Wallace

Chapter URL: <http://www.nber.org/chapters/c6680>

Chapter pages in book: (p. 51 - 66)

DIRECTOR'S COMMENT

The figures in Mr. Mills' paper and other evidence indicate an important feature of the inflation in 1946-47 which in my judgment should receive emphasis, since it is often overlooked. This inflation was characterized by large increases in key prices (particularly farm and food items, building materials, coal and other basic materials) and key wages, (coal, steel, and others) which intensified a cost-of-living-wage-price spiral and stimulated a general inflationary psychology. Subsequent price and wage advances at other points in the economy have in part represented a process of adjustment, supported by liberal use of credit and war-time savings, to those advances in business costs and living costs at key points.

A large armament program similarly produces strong inflationary tendencies at particular key points in the economy, although the focus of impact is, of course, quite different.

These facts emerging from analysis of the process of inflation in different types of situation are important in relation to the question of remedies. They cast doubt on the effectiveness of monetary and fiscal controls by themselves in a situation in which heavy inflationary impacts are at first concentrated on particular key segments in the economy. Could restrictive monetary and fiscal controls have held within moderate limits the increases in prices of grain, meat, milk, and coal, and the increases in key wages in 1946-47? If so, would they have produced a serious depression in the process?

D. H. WALLACE

APPENDICES

The text of this monograph deals with selected aspects of the complex price and wage movements of the last eight years. For the benefit of those who may wish to study these movements in greater detail, or to trace changes not here discussed, various price index numbers are brought together on a common base in Appendix Tables 1 to 7. Appendix Table 8 contains monthly indexes of prices from July 1943 to March 1948 for the various groups entering into the commodity classifications of the National Bureau of Economic Research.

APPENDIX TABLE 4
Construction Costs, Selected Dates, 1939-1948

	9/1938- 8/1939	March 1942	June 1946	March 1947	May 1947	Feb. 1948	March 1948
Aberthaw Construction Co. ^a	100	116.0	143.6	161.7	159.6	164.9	164.9
American Appraisal Co. ^b	100	118.9	159.1	202.7	210.2	238.3	239.8
Asso. Gen. Contractors of America ^c	100	110.0	134.2	150.2	154.4	170.9	170.9
<i>Engineering News-Record</i> ^d	100	115.8	150.8	168.8	171.8	186.8	186.8
Composite of construction costs ^e	100	115.2	146.9	170.8	174.0	190.2	190.6

^a The indexes of the Aberthaw Construction Company, constructed quarterly, are based upon the cost of constructing an 8-story reinforced concrete industrial structure by the company in Connecticut. The index does not include data for home-office overhead or for profit on the job, but is confined to the cost of labor, materials, plant, tools, insurance, etc., actually required for the construction of the building. The data cited refer to quarters in which the selected dates fall.

^b The indexes of the American Appraisal Company are based on a detailed bill of quantities of material and labor required for typical frame, brick-wood frame, brick-steel frame and reinforced concrete buildings, with allowances for contractor's overhead and profit, in 30 representative cities throughout the United States.

^c The measurements of the Associated General Contractors of America, Inc. combine indexes of wages and materials in the proportion of 40 percent for the former and 60 percent for the latter. Wages used in computing this index are for hod-carriers and common laborers; material prices are for sand, gravel, crushed stone, Portland cement, common brick, lumber, hollow tile and structural and reinforcing steel. Wages and prices are reported by 12 district offices of the Association.

^d The indexes of the *Engineering News-Record* include: the base price of structural steel shapes at Pittsburgh, wt. 24; consumers' net price of cement exclusive of bags, f.o.b. Chicago, wt. 3; lumber 2 x 4 S4S pine and fir (ENR 20 cities average), wt. 29; common labor rate (ENR 20 cities, average of wage rates in force), wt. 44.

^e The composite index is an unweighted arithmetic average of the four construction cost indexes in this table.

APPENDIX TABLE 5
Average Hourly Earnings, Manufacturing Industries
Selected Dates, 1939-1948

	<i>1/1939- 8/1939</i>	<i>March 1942</i>	<i>June 1946</i>	<i>March 1947</i>	<i>May 1947</i>	<i>Feb. 1948</i>	<i>March 1948</i>

APPENDIX TABLE 7

Consumer Expenditures, Retail Prices, and Estimates of
Volume of Consumer Purchases, Selected Periods, 1939-1947

	1939	II 1942	II 1946	IV 1946	IV 1947
Consumer expenditures	100	131	205	230	256
Prices of commodities and services at retail ^a	100	122	143	162	174
Derived estimate of volume of consumer purchases	100	107	143	142	147

^a This index is an average of the consumers' price index of the Bureau of Labor Statistics and the retail price index of the Department of Commerce. The more broadly based Bureau of Labor Statistics index which includes rents and other service items is given a weight of two, that of the Department of Commerce a weight of one. The latter index includes some components of the Bureau of Labor Statistics index, but omits the service items, and adds prices of building materials, farm machinery, and a few other commodities. The coverage of neither index is as broad as that of the consumer expenditure compilations, but the average of the two is believed to give a measure of the course of prices paid by all classes of consumers somewhat more accurate than is either index by itself.

For the purposes of the 'deflation' account has been taken of the "hidden increase in the cost of living . . . due to quality deterioration, disappearance of cheaper goods, decrease of special sales, and increase in under-reporting of prices actually charged" to which attention was called by the President's Committee on the Cost of Living. (See mimeographed release by the Bureau of Labor Statistics on the Consumers' Price Index, January 15, 1947.) Three points have been added to the index for the second quarter of 1942, five points for the second quarter of 1946, and three points for the fourth quarter of 1946. No correction was assumed to be necessary for the fourth quarter of 1947.

APPENDIX TABLE 8

Wholesale Prices, Monthly Indexes, 1943-1948
Commodity Classifications of the National Bureau of Economic Research
1939:100

The index numbers, currently constructed by the National Bureau, are based on price quotations compiled by the United States Bureau of Labor Statistics. They were originally published in *Economic Tendencies in the United States* (1932) and, in greater detail, in *Prices in Recession and Recovery* (1936). In an appendix to *Occasional Paper 12, Prices in a War Economy* (Oct. 1943), revised monthly indexes from November 1927 to June 1943 were published. The National Bureau takes this occasion to bring through March 1948 these wholesale price series. The user will realize that the great economic changes since December 1941 lessen the accuracy of measurements of price movements. Indexes for products of the heavy industries and for other groups containing commodities markedly influenced by the transition from peace to war and war to peace are most seriously affected.
