# Subject Index

- Activities of daily living (ADLs): definitions of health status, 279; as indicator of health, 194, 196, 199. *See also* Instrumental activities of daily living (IADLs)
- Actual contribution percentage (ACP) test, 233
- Acute myocardial infarction (AMI), 151, 167–73, 181
- ADLs. *See* Activities of daily living (ADLs)
- ADP. *See* Average deferral percentage (ADP) test
- Age: discrimination because of, 47–50; effect of population aging, 334–38; health insurance coverage by, 120–22; relation to employer costs, 26–28; relation of health care costs to, 26–27
- Age Discrimination in Employment Act (1986), 41
- Age of retirement: differences in, 2–3; effect of discrimination on, 47–50; liquidity effect on, 41–42, 44. *See also* Retirement, early; Retirement hazard rates; Retirement rates, age 65
- AMI. *See* Acute myocardial infarction (AMI)
- Annual Housing Survey (AHS), 194
- Annualized cost of leaving model, 4, 90–91, 93–101, 104
- Average deferral percentage (ADP) test, 233–35
- Aviation Career Incentive Pay (ACIP) Act (1974), 85
- Aviator Continuation Pay (ACP), 86
- Aviator Retention Study* (1988), Department of Defense, 85, 90, 101
- Benefits: fringe benefits for older job changers, 38–40; Social Security earnings test, 30–34. *See also* Continuation coverage
- Bequest function: mental-accounting model of life-cycle, 248–49; in model of elderly health and mobility, 285–86
- Bequests: intergenerational transfers of wealth, 321–22; modeling uncertainty in expected receipt of, 323–34; uncertainty in generation and receipt of, 322–23
- Bonuses: for military pilots, 86, 90, 101–3
- Bribery hypothesis, 214
- CABG. *See* Coronary artery bypass graft (CABG)
- Career Compensation Act (1949), 84
- CCU/ICU. *See* Coronary- or intensive-care-unit bed (CCU/ICU)
- COBRA. *See* Consolidated Omnibus Budget Reconciliation Act (COBRA), 1985
- Compensation, military: Compensation Model of, 90; for pilots, 85–86; Special Separation Benefit (SSB), 104–6; Voluntary Separation Incentive (VSI), 104–6
- Consolidated Omnibus Budget Reconciliation Act (COBRA), 1985: continuation coverage provisions, 5, 116, 123–25, 135–37, 145–46; health insurance coverage before and after, 125–26

- Consumer Expenditure Survey, 28, 253
- Consumption: with defined contribution pension plan, 41–42; effect of housing wealth on, 252–60; housing wealth to finance, 263–65; mental-accounting model of life-cycle, 248–49; overlapping-generations model of bequest uncertainty, 327–34; in precautionary saving model, 250–51; standard life-cycle model, 243–49
- Continuation coverage: benefits under group health insurance, 116; effect on older worker insurance coverage, 138–40; effect on retirement, 68, 126–37, 140; federal-level COBRA coverage, 123–26; state- and federal-level laws, 122–26, 135–37; as subsidy, 145
- Coronary artery bypass graft (CABG), 151, 167–72
- Coronary- or intensive-care-unit bed (CCU/ICU), 167–72
- Costs: of choosing to retire at age 65, 79–81; of employment to firm, 25–30, 35–36; of fixed employment, 13; of housing and moving in standard life-cycle model, 243–49; to individual of working, 28–30; of job change late in life, 13; of labor market rigidities, 12–13; related to reduction in hours worked, 53–54
- Current Population Survey (CPS): flextime rates, 20; labor force participation rates by age, 14–15; Merged Outgoing Rotation Group (MORG), 130; schedules of full-time workers, 24; Survey of Income and Program Participation (SIPP), 135, 138
- Data sources and characteristics: for age-65 retirement rates, 63–68; Air Force Longitudinal Cohort file, 86–87; for analysis of effect of continuation coverage mandate, 138–39; for analysis of hospital production model, 167; for analysis of relation of retirement to health insurance, 129–30, 135; for health and wealth effects of elderly living arrangements, 195–96; Hebrew Rehabilitation Center for the Aged, 198; of retirement behavior, 14–19; for stochastic dynamic programming model, 74; survey of 401(k) participation and contributions, 223–24
- DB pension plans. *See* Pension plans, defined-benefit (DB)
- DC pension plans. *See* Pension plans, defined-contribution (DC)
- Diagnosis-related groups (DRGs): changes in hospital treatment patterns with, 172–82; Medicare pricing, 160–67; PPS pricing rules, 160–65; PPS reimbursements for specific treatments, 5–6, 167–84, 187–88; prospective payment system (PPS) based on, 149–52; reimbursement levels for AMI-related conditions, 167–69, 172–73
- DRGs. *See* Diagnosis-related groups (DRGs)
- Earnings test, Social Security: before and after age 65, 30–34; effect on labor market behavior, 51, 60; hiring and work patterns related to, 30–35
- Elderly people: changes in hospital treatment patterns under PPS, 172–82; effect of providing annuities for, 323; health and wealth of, 213; with health-related disabilities, 275–76; housing wealth as financial security, 251–52; housing wealth changes of, 260–65, 270–71; living arrangements, 193–96, 213; model of health and mobility, 278–90; model of housing choices in relation to health, 278–301, 318–20; model of housing choices in relation to health and housing prices, 301–13; relation of utility to health status and housing consumption, 283–85; trends in living arrangements, 213; utility and consumption in life-cycle models, 243–51
- Employee participation, 401(k) plans, 228–30
- Employee Retirement Income Security Act (ERISA), 1974: conditions for health insurance benefits under, 36; minimum standards for pension plans, 220; retiree reemployment under, 35
- Employers: distribution of matching rates for 401(k) plans, 228–29; ERISA-influenced employment decisions, 35–36; factors in human capital investment, 36–38
- Employment: factors in reduction of hours of work, 53; fixed costs to firm of, 25–30; practices resulting from labor market rigidities, 12; variable costs to firm of, 25–26. *See also* Flextime; Full-time work; Part-time work; Self-employment
- Factors of production, human, 24
- Firms: fixed and variable employment costs, 25–30, 36; human capital investment,

- 36–37; retirement rates at age 65, 64–66
- Flexitime: Germany and Switzerland, 53; impediment to, 53; incidence of, 20, 25; limitations of, 24; and substitution of workers, 60
- 401(k) plans: advantages over DB pension plans, 233; characteristics and participation rates, 227–32; factors in growth of, 221–23; as retirement saving, 219; survey design to collect data for, 223–24
- Full-time work: CPS schedules of, 24; incidence and flexibility of, 20, 23; requirements of, 53; wage rate with new, 38–39. *See also* Flexitime; Part-time work; Team production
- Government intervention. *See* Consolidated Omnibus Budget Reconciliation Act (COBRA), 1985; Continuation coverage
- Health: likelihood function of latent health, 202–5; measurement of elderly people's, 194; model of influence of latent health, 199–202
- Health and Retirement Survey (HRS), 20, 54
- Health Care Financing Administration (HCFA): prospective payment system (PPS), 149; real cost per person of health care, 26
- Health indicators: ADLs and IADLs, 196; in model of living arrangements, 197–99; in multinomial logit analysis of latent health, 196–99, 210
- Health insurance: availability to older Americans and retirees, 4–5, 68, 115–16; costs and incidence of coverage, 120–22; coverage before and after COBRA, 125–26; effect of continuation coverage on older workers, 138–40; effect on age of retirement, 46–47; employer means to eliminate costs of, 36; as fixed employment cost, 25–29, 36; labor market rigidities of, 2; model of effect on retirement, 126–29; postretirement employer-provided, 115; sources of coverage by age and employment status, 120–22. *See also* Continuation coverage; Medicare
- Health status: by age, 117–18; defined in model of elderly health and mobility, 279; probabilities of transition from one state to another, 279–82, 293–94; probabilities with mobility of transition from one state to another, 287–90, 293–94
- Hospital production: dimensions of treatment intensity, 167; institutional characteristics of, 150–56; model of decisions related to, 155–60, 185–87; noncooperative game of, 156–60
- Housing: for disabled elderly people, 275–76; importance of assets, 269–70; in model of elderly health and mobility, 282–85. *See also* Living arrangements
- Housing wealth: generalization of life-cycle model, 242–43; housing windfalls, 252–65; mental-accounting version of life-cycle model, 248–49, 270–71; model of effect on consumption and saving, 242–43; in precautionary saving version of life-cycle model, 249–51, 270; predictors of reductions in, 263; spending of, 263–65; standard life-cycle model of, 243–48, 270; as total household wealth, 268
- HRS. *See* Health and Retirement Survey (HRS)
- Human capital investment, 36–37
- IADLs. *See* Instrumental activities of daily living (IADLs)
- Incentives: defined-benefit pension plans, 51–52, 67–68; leaving incentive programs of Air Force, 104–6; military pilots' incentive pay structure, 84–86, 104–6; to postpone retirement, 68; Social Security retirement incentives, 43–46, 51
- Income: annuity value of housing wealth relative to, 252–53; changes in disposable personal income (DPI), 255; effect of Social Security earnings test on, 32–33; of elderly with housing wealth changes, 260–65; uncertainty related to future flows of, 322–23
- Inflation effect, 42, 52
- Instrumental activities of daily living (IADLs): definitions of health status, 279; as indicator of health, 194, 196, 199
- Job changes: barriers to, 36–40; bridge job, 17–18; following retirement, 38
- Job mobility: barriers for older workers, 36–40; impediments to, 11, 13–14; older workers' reasons for, 11
- Labor force participation: rates by age, 14–16; rates near and at retirement age, 44–46. *See also* Retirement hazard rates

- Labor market: COBRA intervention in, 5, 116, 123–25, 135–37, 145–46; evidence of abrupt withdrawal from, 18–19. *See also* Self-employment
- Labor market rigidities: components and sources of, 1–2, 11–14; described, 1, 12–13; evidence in flextime incidence, 20; evidence in retirement behavior, 19; for older workers, 2
- Life-cycle model of housing wealth: high cost of moving and no reverse mortgage option, 248; high cost of moving and reverse mortgage option, 247–48; with mental-accounting behavior, 248–49, 270–71; no moving costs and no reverse mortgage option, 247; no moving costs and reverse mortgage option, 247; precautionary saving model, 249–51, 270; two-period, 243–46, 270–71
- Liquidity effect, 41–42, 44
- Living arrangements: of elderly people, 213; implications for elderly people, 193; model and estimates of choice related to health indicators, 194, 196–99; model of effect on health, 199–201; nonlinear MIMIC model of choice of, 201–3, 205–10
- Longitudinal Cohort File, U.S. Air Force, 86–87
- Longitudinal Study on Aging (LSOA): data for MIMIC model, 194; NBER Economics Supplement to, 195–96, 214; Supplement on Aging, 195
- LSOA. *See* Longitudinal Study on Aging (LSOA)
- Medical care: spending by age, 118–20; utilization by age, 118–19
- Medical insurance. *See* Health insurance
- Medicare: as incentive to retire at age 65, 68; introduction and availability of, 115; PPS mechanism to update prices, 166, 167; price regulation, 160–67; reimbursement to hospitals based on DRGs, 5–6; sources of cost estimates, 165. *See also* Prospective payment system (PPS)
- Military manpower economics, 84
- Military retirement. *See* Retirement behavior, military
- MIMIC (multiple-indicator, multiple-cause) model, 194, 200–201, 205–10
- Mobility costs, 286–90
- National Bureau of Economic Research (NBER), Economics Supplement to the LSOA, 194–96, 213
- National Health Interview Survey (NHIS), 195
- National Longitudinal Survey of Older Men (NLS), 16–17, 38
- National Long-Term Care Survey, 282
- National Medical Expenditure Survey (NMES), 39, 66; retirement hazard rates before, at, and after age 65, 110–12, 125; retirement rates with and without retiree health insurance, 69–70
- National Nursing Home Survey, 282
- New Beneficiary Survey (NBS), 33–34, 38
- NLS. *See* National Longitudinal Survey of Older Men (NLS)
- Older workers: age discrimination against, 47–50; analysis of effect of continuation coverage, 126–37; earnings test under Social Security, 30–34; effect of continuation coverage on health insurance, 138–40; health status by age, 117–18; impediments to job changes, 36–40; labor market rigidities for, 2; medical expenses incurred by, 118–20
- Omnibus Budget Reconciliation Act of 1981 (OBRA), 221. *See also* Consolidated Omnibus Budget Reconciliation Act (COBRA), 1985
- Option value model of retirement behavior, 4, 84, 87–90, 92
- Overlapping-generations model: uncertainty of bequests, 323–31; uncertainty of bequests with medical expenses, 331–34
- Panel Study of Income Dynamics (PSID): hours worked prior to retirement, 17; reduction in hours of work, 20; wealth data, 251–60
- Part-time work: effect of team production on, 25; retirees rehired for, 35–36; wage rates based on employment costs, 26f, 28–30; wage rate with new or old, 38–39
- Pension Benefit Guaranty Corporation (PBGC), 220–21
- Pension plans: influence on complete retirement, 40–43; influence on employment choices, 34–35; labor market rigidities of, 2. *See also* 401(k) plans
- Pension plans, defined-benefit (DB), 40–43,

- 51–52; effect on employee work choices, 34–35; factors in decline of, 219; participants and contributions, 221–22; proposed indexing of, 52; provisions related to job mobility, 40–43
- Pension plans, defined-contribution (DC): factors in growth of, 219; incentives, wealth, and liquidity effects, 41–43; participants and contributions to, 221–22
- Pension system, military: structure of, 86; study of changes in, 90
- Percutaneous transluminal coronary angioplasty (PTCA), 151, 167–72, 181
- PPS. *See* Prospective payment system (PPS)
- Price regulation, Medicare, 160–67. *See also* Diagnosis-related groups (DRGs); Prospective payment system (PPS)
- Production. *See* Hospital production; Team production
- Productivity: changes related to age, 20–23; employer's investment in worker's, 36–37; life-cycle variations, 59; relation to age, 48–49; in team production theory, 24–25
- Prospective payment system (PPS): changes in hospital treatment patterns with, 172–82; diagnosis-related groups as basis for, 160–65, 187; reimbursement to hospitals for Medicare, 149, 159–60
- PSID. *See* Panel Study of Income Dynamics (PSID)
- PTCA. *See* Percutaneous transluminal coronary angioplasty (PTCA)
- Quality of Employment Survey, 39
- Retirement: effect of continuation benefits on, 116, 126–37; effect of defined-contribution plans on, 42; effect of Medicare eligibility on, 52; factors influencing complete, 40–50; forms of health insurance available to retirees, 115–16; health insurance as factor in decision, 117; job changes following, 38; labor market rigidities of policies for, 2; liquidity effect on age of, 41–42; medical insurance effects on, 46–47; Social Security effect on, 43–46
- Retirement, early: continuation coverage benefits, 116; descriptive evidence, 68–73; high rates of, 44; incentives in defined-benefit and -contribution plans, 41–43; insurance coverage with continuation coverage, 138–40; pension plan distributions with, 34–35; reduction in Social Security benefits with, 30–34, 43–44, 51; Social Security earnings test, 30–34, 51. *See also* Age of retirement
- Retirement behavior: annualized cost of leaving model, 90–91; option value model of, 84, 87–90, 92; relation to labor market rigidity, 14–19; specification for stochastic dynamic programming model, 92–93; stochastic dynamic programming model, 73–74
- Retirement behavior, military: annualized cost of leaving (ACOL) model, 90–91, 93–101, 104; models of, 83–84; option value model of, 87–90, 93–101, 104; stochastic dynamic programming specification, 92–101, 104, 106–8
- Retirement hazard rates: at age 65, 64–66, 110; before, at, and after age 65, 110–12; description and definition, 44–45; Germany, 45
- Retirement History Survey (RHS), 16–18, 213; age-65 retirement rates, 64; hours of retired workers still working, 31–32; job change data, 38; living arrangement data, 194; mandatory retirement rates, 47; retirement rate data of, 63–64, 114
- Retirement models: estimates of stochastic dynamic programming model, 73–78; option value and stochastic dynamic programming, 61–62
- Retirement rates, age 65: determinants of, 70–75; firm-specific and cross-firm data sets, 64–68; previous literature on, 63
- RHS. *See* Retirement History Survey (RHS)
- Saving: in defined-contribution pension plan, 41–42; effect of housing wealth on, 252–60; withholding of pre-age-65 Social Security benefits, 30–31
- Self-employment: by age (1990), 18–19; switch from wage and salary to, 18–19
- Social Security: delayed retirement credit, 43–44, 51; earnings test under, 2, 30–35, 51, 60; effect on retirement, 30–34, 43–46, 51. *See also* Earnings test, Social Security; Medicare
- Special Separation Benefit (SSB), 104–6
- Supplement on Aging (SOA), 195. *See also* Longitudinal Study on Aging (LSOA)

- Survey of Income and Program Participation (SIPP), 42, 66; retirement hazard rates before, at, and after age 65, 110–12; retirement rates with and without retiree health insurance, 69–70
- Tax Equity and Fiscal Responsibility Act (TEFRA), 1982: hospital payments under, 152; vesting schedule provisions, 221
- Tax Reform Act (TRA86), 1986: ADP test, 233; excise tax on excess pension plan assets, 221; limit on tax deferral benefits, 233
- Team production: importance in workplace, 25; labor market rigidities with, 1–2; requirements of, 11, 13, 37–38; theory of, 24
- Uncertainty: in overlapping-generations model, 323–34; of receiving a bequest, 322–23; related to future income, 322–23
- Utility: in model of elderly health and mobility, 278; in precautionary saving model, 249–51; relation to elderly health status and housing consumption, 283–85; in standard life-cycle model, 244–249
- Voluntary Separation Incentive (VSI), 104–6
- Wage rates: based on employment costs, 28–30; with job change, 38–39; related to individual productivity changes, 20; variation with age, 22–23; for workers following retirement, 38
- Wealth: intergenerational flow of, 321–22. *See also* Bequests; Housing wealth; Life-cycle model of housing wealth
- Worker productivity: with job skills and knowledge, 36–38; in theory of team production, 24
- Workers: fixed costs to individual of working, 28–29; labor market rigidities for, 1–2; rates of mobility, 41; team production inflexibility, 24. *See also* Older workers
