
Subject Index

- Agricultural sector
The Netherlands, 336–39
Sweden: post-1830 wages and productivity, 130; pre-1870s, 130; size of (1870–1950), 132, 134
United Kingdom: productivity (1700–1800), 92; shift away from (1700–1850), 93
United States, 49
Württemberg, Germany, 297, 311
- Birthrates
Australia, 411–12
Japan, 277–79
The Netherlands, 344–45, 363–64
- BMI. *See* Body mass index (BMI)
- Body mass index (BMI)
defined, 9, 35, 53
importance of, 53–54
as measure of nutritional status, 9
as predictor of productivity, morbidity, and mortality, 53
United States, 61–62
- Borda rule, 12–13, 74–75
- Consumption
changing patterns of, 32
of meat as measure of living standard, 170–72, 434
France, 166–68, 171–74, 434
Germany, 318–19
United Kingdom, 167–68
- Data sources
for comparisons of countries studied, 438–46
- Australia: female recruits, 416–17; male recruits, 413–16
France: economy, 184–90; heights of French and British people, 174–75; heights of French men at age 20, 189–90, 197–98
Germany: sampling and methodology, 326–27
Sweden: for historical analysis of health, 157–58
United Kingdom: British economy, 184–89; health and welfare of women, 202, 205–7, 232–44; heights of English and Irish convict men, 235–36; heights of English and Irish convict women, 232–35; literacy of English and Irish convicts, 236–37
United States: for trends in health and welfare, 78–84
- Death rates. *See* Mortality rates
- Deprivation indexes
in calculation of HDI, 147
Sweden, 147–52
- Diseases
influence on human physical growth, 37
Germany, 313–14
Japan, 265, 267
United States, 64–67
- Economic growth
alternative concepts of, 31–33
early measures of, 20–23
relation to health, 47
relation to income distribution, 33–34
theories of, 162–63

- Economic growth (*cont.*)
 Australia: 1860 to post–World War II, 379; decline (1880s and 1890s), 407
 France: per capita output (1750–1990), 164–65
 Japan, 260
 Sweden: 1914–50, 132–34; with industrialization (1870–1914), 131–32
 United Kingdom: 1700s, 92; per capita output (1750–1990), 164–65
 United States: 1840–1960, 49
 Württemberg, Germany, 288
See also Industrialization
- Education
 Japan: national compulsory, 263
 United Kingdom: opportunities for (1700–1914), 99–100; of women (1790–1815), 216–18
See also Literacy rates
- Employment. *See* Labor force
- Engel's law, 32, 38
- Epidemics
 Australia, 401, 403–6, 410–11
 Japan, 265
 The Netherlands, 335–36
 Sweden, 144, 145
- Famines, Japan, 257
- Fertility. *See* Birthrates
- Government role, Japan
 before industrialization (1600–1868), 256, 259
 during industrialization, 251–52, 259–60
 military expansion, 266–67
- Gross domestic product (GDP)
 per capita as indicator of living standard, 7–9, 11–12
 France: per capita output (1750–1990), 164–65
 Japan: real per capita (1907–40), 274; relation of height to per capita, 267–69; relation of nutrition to per capita, 269–71
 Sweden: per capita (1820–1965), 153–55
 United Kingdom: per capita (1756 to 1978–80), 115–18, 121t; per capita output (1950–1990), 164–65
- Growth process, physical, 3
- HDI. *See* Human Development Index (HDI)
- Health
 forecasting, 10
 methods to appraise, 10–13
 relation to economic growth, 47
- Japan: before industrialization (1600–1868), 253–59
 Sweden (1800–1995), 135–46
 United States: long-term trends, 50–53; trends in distribution of, 60–67
See also Body mass index (BMI); Diseases; Epidemics; Morbidity; Mortality rates; Public health measures
- Height
 catch-up growth, 5
 comparing national incomes and changes in, 37–38
 comparison among countries studied, 429–30
 as component of body mass index, 35
 determinants of, 3–4, 401–2
 function of growth process for, 3–5
 impact of net nutrition on, 35
 as measure of living standard, 5–6
 as measure of nutritional status, 9
 as measure of welfare, 34–36
 sources of information about, 5, 7
 Australia: determinants of, 402–12; factors influencing, 401–12; by occupation, 393–96; relation to economic conditions (1890s to 1920s), 410–12; of school-children in Victoria (1912, 1922), 396–97; tests for normality, 417–19; urban and rural male recruits (1868–1915), 407–9
 France: determinants of male heights at age 20 (1840–1911), 179–83; general pattern of, 175–77; of males, 174–76
 Japan: of children (1894–1974), 271–73; estimates (600 B.C. to 1900), 258–59; by prefecture (1899–1937), 275–76; relation to per capita GDP during industrialization, 267–69; 20-year-old recruits (1899–1937), 275–76
 The Netherlands: compared to French and Italians (1818–1940), 342–43, 358–60t; median (1817–1940), 339–42, 356–57t; regional differences (1823–53), 351–53t; relation to per capita income, 367–69t; relation to population growth (1817–57), 345–46, 365t
 Sweden: deprivation index for, 148–52; levels (1790–1870), 135, 142
 United Kingdom: of children (1908–69), 105–14, 119–20t; of female Newgate prisoners (1785–1857), 218–22, 239–42; levels of adult (1710–1915), 100–105; of males, 175–77; population trends, 91; of women by occupation, 222–25; of

- women by region, 225–28; of women in relation to mortality, 228–31
- United States: among slaves (1800–1850s), 51; decline in nineteenth century, 63–66; of native-born soldiers (1710–1970), 50–51; by occupational class, 60–61; by race (1820–1970), 61–62
- Württemberg, Germany: before 1852 and after 1893, 302, 304–6; estimated trends (1852–93), 293–97, 436; trends within occupations, 299–302
- Historical National Accounts Project, The Netherlands, 348, 349
- Hoffman's index of caloric balance, 318–19
- Hours of work, Germany and Württemberg, 316–18
- Human Development Index (HDI)
- components and function of, 11–12, 33, 71, 110–11, 320–21
 - construction of, 110, 114, 321
 - criticism of, 114
 - use in economic history, 12
- Germany: using average population heights, 322–23; using HDI components, 321–22
- Sweden: calculation using deprivation indexes, 147–52; compared to less-developed countries, 152; compared to United States, 152; for life expectancy, height, and infant mortality (1820–1965), 149, 151–53; raw data for, 129
- United Kingdom: changes in, 115–18
- Income, national
- early estimates and comparisons, 25–27
 - inclusions in and exclusions from, 27–31
 - international comparisons and comparisons over time, 31
 - as measure of economic growth, 23–31
 - as method to appraise welfare, 67–76
 - Sweden: growth (1870–1910), 131
- See also* Net National Product (NNP), Germany
- Income per capita
- comparison among countries studied, 426–27, 429
 - as indicator of living standard, 7–9, 289
 - Australia: gross community income per capita (1880–1940), 386–87
 - The Netherlands: relation to heights (1805–1913), 348–51, 367–69t, 370t
 - Sweden: deprivation index for, 148–52
 - United Kingdom: levels of (1700–1801), 92
- See also* Gross domestic product (GDP); Income, national
- Indexes
- body mass index, 35 (*see also* main entry)
 - deprivation indexes, 147–52
 - Hoffman's index of caloric balance, 318–19
 - Human Development Index, 33 (*see also* main entry)
 - Physical Quality of Life Index, 33
 - Sinclair's index of well-being, 403, 405–6
- Industrialization
- standard of living by country and phase of, 423–30
 - Australia, 402–3
 - France (1806–1990), 165–66, 169–70
 - Germany: 1830s to 1914, 286; regional groups, 287–89; Württemberg, 288
 - Japan: in Meiji period (1868–1926), 251–52, 254, 259–62
 - The Netherlands: nineteenth century, 333–34, 336–37, 339
 - Sweden, 129–34
 - United Kingdom: changes in living standards, 93–100; of labor force (1806–1990), 165–66, 169–70; living standards of female Newgate prisoners (1785–1815), 218–19; origins and nature of, 92–93; women's height and living standards during, 209–22
- Jarque-Bera tests
- for height normality of Australian recruits, 417–19
 - for height normality of British criminals and convicts, 232–33, 235, 240, 243
- Labor force
- France: shift in composition (1806–1990), 165–66, 169
 - Germany: change in composition with industrialization, 286–87
 - Japan: composition by 1940, 264; participation rates (1872–1940), 261; redistribution with industrialization, 262
 - United Kingdom: employment in agriculture and industry (1700–1850), 93; shift in composition (1806–1990), 165–66, 169; unemployment in relation to height of children (1927–37), 108–9
 - United States: composition and transformation (1800–1959), 49
- Life expectancy
- comparison among countries studied, 429
 - Australia: 1890–1940 period, 385–86; estimates (1870–81 to 1932–34), 398
 - Germany and Württemberg, 315–16

Life expectancy (*cont.*)

- Japan: compared to other countries studied, 437; before industrialization (1600–1868), 256–59, 264–65; during industrialization, 265
- Sweden: 1820–1965, 129t, 135; deprivation index for, 148–52; increases (1950–95), 146
- United Kingdom: at birth in England and Wales (1700–1800), 256–57; changes in (1756 to 1978–80), 115–18; nineteenth century, 97
- United States: eighteenth to mid-nineteenth centuries, 50–51
- Literacy rates
- comparison among countries studied, 429
 - Germany and Württemberg, 319–20
 - Japan, 263–64
 - Sweden: deprivation index for, 148–52
 - United Kingdom, 99–100, 115–18
- Living standard. *See* Standard of living
- Modernization, The Netherlands
- retarded nineteenth-century, 333–34, 347
 - role of regional differences in, 339
- Morbidity
- body mass index as predictor of, 53–58
 - Australia, 400–401
 - United States: chronic conditions, 59–60; relation to waist-hip ratio, 57–59
- Mortality
- body mass index as predictor of, 53–57
 - relation to weight, 53
- Mortality rates
- Australia: age-specific (1870–81 and 1920–22), 398–99; from disease (before and after 1890), 400–401; infant (1870–1940), 399–400; infant (late nineteenth–early twentieth century Adelaide), 409–12; during typhoid epidemic, 403–6
 - France (1740–1990), 177–79
 - Germany: disease-related, 312–14; infant, 306–7, 310f
 - Japan: from infectious disease, 265, 267; by prefectural type (1896–1937), 276–77
 - The Netherlands: changing pattern (1805–1915), 344–45; crude death rates and birthrates (1805–1915), 363–64t; regional differences (1803–1911), 340, 351–53, 371–73t; relation to agricultural price index (1810–53), 346–47, 366t
 - Sweden: 1751–1995, 135–42, 144–46; deprivation index for infant, 148–52; factors in lowered, 156

- United Kingdom: from eighteenth through early twentieth century, 96–99; in England and Wales (1700–1914), 96–99; for women in relation to height, 228–31
- United States: relation of central body fat to, 57–59; relation to height, 51–52
- Württemberg, Germany: infant, 297, 307–12

- Net National Product (NNP), Germany, 285, 286, 289–92

Nutrition

- food allocation at family level, 213–15
- Hoffman's index of caloric balance, 318–19
- impact of net nutrition on height, 4, 35, 201
- meat consumption, 170–74
- nutritional status measured by height and body mass index, 9
- relation to health, 4–5
- Japan: status before industrialization (1600–1868), 258–59; status during industrialization, 267–73
- Württemberg, Germany: net nutrition (1852–93), 296–97

Physical growth, human, 37–38

Physical Quality of Life Index, 33

Population

- as early measure of economic growth, 20–22
 - Australia: growth in cities, 403–4, 406–10
 - Germany and Württemberg: losses through emigration, 316–17
 - Japan: before industrialization (1600–1868), 254; urbanization during industrialization, 262–64
 - The Netherlands: growth (1805–1915), 343–44, 361–62t; relation to lagged median height (1817–57), 345–46, 365t
 - Sweden, 130–34
 - United Kingdom: increase (1700–1850), 93
 - United States: shift to urban areas, 49–50
- Price index, The Netherlands, 346–47, 366t
- Productivity
- body mass index as predictor of, 53–57
 - relation of height to, 52–53
- Public health measures
- Australia: effect on disease environment (1890s to 1920s), 410–13; infant welfare movement, 411
 - Germany, 436 (*see also* Social legislation, Germany)
 - Japan, 267
 - The Netherlands, 336

- Sweden, 143–46, 437
United Kingdom: nineteenth century, 229–30
United States: investments in (1870–1930), 65
- Quantile Bend Estimator (QBE)
in correcting Swedish height data, 158
function of, 7, 193
Württemberg, Germany, 293–97, 327
- Reduced Sample Maximum Likelihood Estimator (RSMLE), 7, 293–97, 327
- Sinclair's index of well-being, 403, 405–6
Social legislation, Germany, 285–86, 299
Standard of living
evidence required to assess, 162–63
HDI as measure of, 11–12
indicators by country and date, 423–30
measurement of, 18
meat consumption as measure of, 170–74, 434
per capita income as measure of, 10
relationship of height to, 5–6
Australia: estimates of period of decline, 412–13; factors influencing (1861–91), 380–84; factors influencing (1890–1940), 384–88
France: meat consumption as measure of, 171–73, 434
Germany and Württemberg: indicators of (1850–1950), 289–323; post-1885 improvement in, 286
Japan: before industrialization (1600–1868), 254–55
Sweden, 146
United Kingdom: female Newgate prisoners (1785–1857), 219–22; with industrialization (1700–1914), 93–100; real wages as indicator of (1705–1855), 94–96
- Stature. *See* Height
- Urbanization
relation to industrialization, 166
Australia, 403, 406–10
France (1756–1906), 166–67
Germany (1852–1961), 288–89
Japan: factors influencing, 262–63
Sweden, 132, 134, 142
United Kingdom (1700–1850), 93
United States (1800–1900), 49–50
Württemberg, Germany (1852–1961), 288–89
- Wages
France (1750–1913), 109–10
Germany: index of real gross (1850–1914), 292
The Netherlands (ca. 1650–1860s), 345
United Kingdom: 1750–1913, 109–10; levels for men and women (1700–1850), 94–96; of women during industrialization, 203–5
United States: increases in nineteenth and twentieth centuries, 49
- Waist-hip ratio, 57–59
- Weight
as component of body mass index, 35
as predictor of illness and mortality risk, 9
relation to mortality, 53
See also Body mass index (BMI)
- Welfare
height as measure of, 34–36
indexes of, 33–34
methods to appraise, 10–14, 67–76
outcomes using Borda rule, 12–13
Japan: before industrialization (1600–1868), 253–59
Sweden: trends, 146
See also Human Development Index (HDI)
- Well-being, physical
measures to describe, 35
France: influence of economic welfare on, 179–83
- Women
Australia: heights of female recruits, 416–17
United Kingdom: employment before industrialization, 202–3; employment during industrialization, 203–5; height during industrialization, 209–22; living standards of Newgate prisoners (1785–1815), 218; standard of living during industrialization, 209–22
