
Subject Index

- Account books data, 246–50. *See also* Farm account book data
- Accounting methodology, 268–70, 302
- Agricultural sector: crop specialization in, 340; decline in, 118, 178, 312; dual labor market in, 328; effect of weather on, 334; estimates of labor force in, 46, 50–56, 75–76; labor contracts in, 326–29; productivity in, 23–24, 76, 311–12, 331–34; structural change in, 329–31. *See also* Farm formation; Grain production; Hay and grass production
- Aldrich report, 176, 188, 190
- Animal inventory, 118, 324
- Anthropometry, 271–73. *See also* Height
- Archaeological finds data, 240–45
- Artisanal shops, 358–59
- Auxology (study of human growth), 271–73, 308. *See also* Height
- Capital: concept of, 81, 115; invention-generating, 354; ratio to output, 119
- Capital stock: changing composition of, 92–95, 98, 118; current price estimates of, 86–88; growth in, 86–92, 98, 117–19; human capital as, 81, 115; increases in, 293; land improvement in measurement of, 81, 90, 93–95, 99–102, 116; national, 82; per capita, 117, 118; relation to economic growth, 80–81, 83; value of consumer durables as, 82
- Children: determinants of growth patterns, 276–77; in labor force, 36–37, 44, 46, 49–56, 57–59, 61–62, 63–66, 69–72, 297; legislation restricting labor of, 271; slave, 291–92, 299; stature of factory, 271
- Cholera epidemics, 11, 14–15, 297, 298. *See also* Disease
- Clothing production, 159
- Conference on Research in Income and Wealth, 269
- Cost indexes, 103–4
- Cost-of-living index, 180, 212
- Crop production. *See* Grain production; Hay and grass production
- Culinary history data, 233–40
- Cyclical: of growth rates, 86–91; of patents, 351–52, 373
- Data sources: agricultural censuses as, 156; for economic growth analysis, 83–86; for height, 124, 274–76; for housing value, 122, 124; for information on structures, 102–3; for invention and innovation analysis, 348–50; for New York State housing values, 133–35; for per capita income, 278–79; probate inventories as, 220–31; for rents, 137; for standard of living, 231–45, 247, 270; for wages, 176–77, 181–85; for wealth, 121–22
- David-Solar (DS) wage index, 186–90
- David-Solar price index, 180–81
- Daybook data, 313
- Diet: archaeological data for, 240–45; com-

- Diet (*continued*)
 position (1780s to 1830s), 225; determinants of, 277; estimates from account books for, 246–50; improved, 5. *See also* Food consumption
- Disease: incidence of, 11, 14–15; transmission of, 296–97, 298. *See also* Health
- Economic growth: capital stock to measure, 116; pre-Civil War acceleration of, 98; problems of measuring, 348–50. *See also* Productivity growth
- Embargo of 1807, 33
- Equipment: as measure of modernization, 118; price indexes for, 109
- Farm account book data, 313, 324, 326
- Farm diary data, 247
- Farm formation, 90–91, 93–95, 99–102
- Farm labor force. *See* Agricultural sector; Labor force; Labor productivity
- Food consumption: antebellum trends in, 218, 224–26, 252; data for, 231–33; estimates from culinary history, 233–40; of meat (1780s to 1830s), 225–26; of vegetables (1780s to 1830s), 225. *See also* Diet
- Food distribution systems: changes in, 218; sources of data for, 250–52
- Food production, 6–7. *See also* Grain production
- Gini coefficients: for height distributions, 150–51; for height on per capita income, 279–83
- Goldin-Margo (GM) price deflator, 187–90
- Grain production, 6–8, 317–25
- Gross domestic product per capita: as measure of living standard, 26–35; in 1800–1840 period, 98
- Hay and grass production, 319–25
- Health: decline of antebellum, 175, 176; relation to poverty, 277–78. *See also* Disease
- Hedonic regressions, 197, 199–207
- Height: conditions for achievement of, 292–93; correlation with economic status, 169; correlation with income, 277–84; cycles in, 293; determinants of, 276–77, 309; distributions for four time periods, 148–51, 169; geographic differences in, 287, 289, 294–95; Gini coefficients and Lorenz curves of, 149–55; during growth process, 276–77; as indicator of nutritional status, 12–16; nineteenth-century decline of, 14–15, 293–98; relation to literacy, 155; relation to living standard, 274–76, 308. *See also* Auxology (study of human growth)
- Hoover food price subindex, 189–90
- House values: estimates of New York State, 132–37; of nineteenth century, 136; as representation of wealth inequality, 131–47
- Housing: costs of, 212–13, 227
- Housing values, 122, 124, 170
- Immigrants: effect on standard of living, 10; increased number of, 96; in labor force, 42, 45–47
- Income: dwelling-derived, 131–47; growth trend of, 119; relation to health, 277–78; relation to height, 277–84; variation in average, 163; women's opportunities to earn, 218–19. *See also* National income accounting
- Income distribution: in colonial United States, 293; estimates (1798), 131; estimates for Utah (1857), 132
- Income per capita: growth of, 4, 118; for labor force, 76–77
- Industrialization: beginning of, 293; estimated impact of, 5, 98–99, 175; spread of, 298; technological change during, 346–47
- Inflation: Revolutionary War period, 221
- Innovation: changing forms of, 3–4; in construction and building, 102–8
- Inputs: growth of per capita, 96; to productive process, 3; supply of aggregate, 95–98
- International Society for Ecological Economics conference, 270
- Invention: diffusion of, 370–71, 379–81; factors specialized to, 354–55; patent rates as reflection of, 355; patent system as reward for, 350; relation of productivity to rate of, 363, 366–70; role in manufacturing of, 350–57. *See also* Innovation
- Inventories: estimates of animal, 93, 108–9, 118; perpetual estimates of, 83–86; probate, 220–31, 270, 313, 324
- Labor contracts, 326–29
- Labor force: estimates of total and farm, 21–26, 35–72; exposure to disease in nineteenth century, 297; growth in manufacturing sector, 359–60; immigrants in,

- 10; productivity of farm, 325–34; reorganization of farm, 326–27, 340; shift out of agriculture, 178; time-quality adjustment to estimates of, 110–12. *See also* Gross domestic product per capita
- Labor force participation:** of children, 36–37, 44, 46, 49–56, 57–59, 61–62, 63–66, 69–72, 297; of slaves, 24–26, 46, 50, 52–55, 56–59, 61, 64–66, 71; growth of, 96; of women, 42, 44, 46–49, 50, 52–54, 56, 63, 66, 69, 71–72, 218–19
- Labor market:** effect of integration, 327–28; integrated global, 212. *See also* Labor contracts
- Labor productivity:** estimates of agricultural sector, 23–24, 339–40; impact of total factor productivity on, 373; increase per agricultural worker in, 325–26; turning point in agricultural, 314–16, 334–36
- Land improvement:** decline in share of, 118; labor force required for, 325; value of land clearing and breaking, 90–91, 93–95, 99–102
- Land ownership,** 157–59
- Land value,** 141, 143
- Life cycle,** 170
- Life expectancy:** for those born before 1790, 263; trend of, 287f, 288t, 294
- Literacy rates,** 155
- Living standard:** accounting methodology for measures of, 302; advancement of, 29; circumstances affecting, 10–11; contrasts in, 226–27; data sources for, 270; economic research in, 270; estimates (1798), 131; international standard for, 284–85; methods to measure, 8–12; of middle classes, 218; of the poor, 167, 218; proposal for research in measuring, 301–2; real wages to measure, 174–76; relation of height to, 273–85, 308
- Lorenz curves,** 124, 151–55
- McLane Report (1832),** 178, 362, 378
- Malaria,** 11, 15, 297. *See also* Disease
- Malnutrition.** *See* Nutritional conditions
- Manufacturing sector:** changes with growth in, 98; estimates of regional productivity, 355–57; measuring productivity growth in, 348–50; productivity growth and patent correlation, 355–57; sectoral shift to, 178; technical change in, 359–73. *See also* Artisanal shops
- Margo-Villafior (MV) wage index,** 186–90
- Markets:** response of patenting to pressures of, 351–52, 354; role in productivity gains, 373. *See also* Labor market
- Marriage rates,** 130–31
- Middle classes:** living standards of, 218
- Modernization,** 4, 118
- Mortality rates:** adult, 261–62, 263; among slave children, 263, 291–92, 309; relation of height to, 300
- National Bureau of Economic Research,** 267–68
- National income accounting,** 266–71, 273, 308
- Nominal wages,** 197, 199–207
- Nutritional conditions:** effect of industrialization on, 297–98; effect on human growth of, 12–13, 276–78; role of urbanization on, 294–95; of slaves, 291–92. *See also* Diet; Food consumption; Health; Height
- Nutritional status,** 12–16, 175, 176
- Output:** ratio to capital of, 119; of slaves, 291
- Output per capita:** comparison with British, 33–34; as indicator of living standard, 19–20; influences on, 116; levels of growth, 31–35
- Patent records,** 350–57
- Patents:** broadened participation in, 354; rates as reflection of invention, 355–57. *See also* Innovation; Invention; Productivity growth
- Physical Quality of Life Index,** 270
- Poor, the:** in agricultural censuses, 155–59; data sources for, 122; household goods of rural, 220; housing standards of, 228; information about, 170–71; living standards for, 167, 218; marriage rates for, 130–31; shanty dwellers, 138–41; in wealth distribution estimates, 128–31. *See also* Poverty
- Poverty:** areas in United States of (1798), 141–47; indicators of relative, 141–47, 157–59; poor health as consequence of, 277–78; wealth in analysis of, 170. *See also* Poor, the
- Price indexes:** for equipment, 109; for farm products, 340; for structures, 103–4
- Prices:** movements of antebellum, 178–81; short-run behavior of, 193–96. *See also* Retail prices; Wholesale price data
- Productivity:** in antebellum period, 293; in-

- Productivity (*continued*)
daxes, 348; problems of measurement, 348; turning point in farm labor, 334–36. *See also* Manufacturing sector; Total factor productivity
- Productivity growth: correlation with patent rate, 355, 373; innovation as source of, 383; measuring manufacturing sector, 348–50
- Real wage indexes: construction of, 177–78, 197–207; meaning of, 174–75; as measure, 175
- Real wages: in agriculture and manufacturing, 178; comparison of British-U.S., 210–12; comparison of estimates, 186–90; construction of indices for, 197–207; growth rate of, 183–85, 193–94, 196; to measure standard of living, 174–76; Midwest-Northeast ratio, 190–91; regional differences in, 190–92, 213–14; during U.S. industrialization, 293
- Rents: costs in 1790s, 227; relative price of, 212–13
- Retail prices, 179–81
- Savings: effect on capital stock, 116; ratio of, 119
- Self-sufficiency, 219–20
- Shays's Rebellion, 331–34
- Slaves: in agricultural sector, 24–26; changing levels in heights, 298; health of young, 263, 291–92, 299, 309; in labor force, 46, 50, 52–55, 56–59, 61, 64–66, 71; pattern of growth, 291
- Smallpox, 297. *See also* Disease
- Structures, 102–8
- Tax valuation data, 315–16, 317, 341
- Technological change: during early industrialization, 346–47; in manufacturing, 357–63
- Technology evolution, 359
- Time series, integrated, 195
- Total factor productivity: differences in artisanal and manufactories, 358; feedback process of, 312–13; growth in manufacturing sector, 359–62, 373; growth of, 95–98, 340; link to patent rate, 363–73, 374
- Typhoid, 297. *See also* Disease
- Typhus, 297. *See also* Disease
- United Nations, 267, 269
- Urbanization, 175
- Wages: data in military records, 181; lag in, 173; long-run growth rate of real, 183–85; sticky, 214–15; surveys of antebellum, 176–78. *See also* Real wages
- Warren-Pearson price index, 194, 296t
- Wealth: changes in equality of, 121–25; characteristics of those without, 163; with omission of human capital from, 170
- Wealth distribution: for 1798, 1850, 1860, and 1870, 121–25; among white males, 128–29; in colonial United States, 293; of real estate, 125–27
- Wealth-income life cycles, 170
- Weeks report, 176–77, 188, 190
- Weight, 12. *See also* Height; Nutritional Status
- Wholesale price data, 178–79
- Widow's allowances data, 231–33
- Williamson-Lindert (WL) wage index, 186–90
- Women: changing role of, 218–19; in labor force, 42, 44, 46–49, 50, 52–54, 56, 63, 66, 69, 71–72
- World Bank, 270
- Yellow fever, 11, 14, 297. *See also* Disease
