Changes in Exchange Rates in Rapidly Developing Countries

Theory, Practice, and Policy Issues

Edited by Takatoshi Ito and Anne O. Krueger

Historically, most developing nations have employed strict exchange rate controls and heavy protection of domestic industry. By contrast, many East Asian nations maintained exchange rate regimes designed to achieve an attractive climate for exports and an "outer-oriented" development strategy. This volume explores the impact of such diverse exchange control regimes in both historical and regional contexts, focusing particular attention on East Asia.

Regionalism versus Multilateral Trade Arrangements

Edited by Takatoshi Ito and Anne O. Krueger

For the entire world economy, and especially for East Asia, the emergence of preferential trading arrangements (PTAs) raises important questions about multilateral trade. *Regionalism versus Multilateral Trade Arrangements* examines the debate over open multilateral trading systems versus regional trade arrangements as it applies to East Asia, and both explores questions and offers answers.

NBER–East Asia Seminar on Economics, Volume 6

Financial Deregulation and Integration in East Asia

Edited by Takatoshi Ito and Anne O. Krueger

In these thirteen essays, American and Asian scholars analyze the effects of financial deregulation and integration on East Asian markets. Topics covered include the impact of financial liberalization in Japan, Korea, and Singapore; macroeconomic policy implications for financial management of export-led growth in Korea and Taiwan; and the effects of foreign direct investment in China.
