
Subject Index

- Active risk management, 523
- Aggregate banking system risk, 157–61;
time variation of, 168–71
- Arrow-Debreu model, 346–54
- Asset return covariance matrices, modeling,
523–27
- Attrition rates, of hedge funds, 282–92
- Bank concentration: diversification and,
219–22; ease of monitoring and, 222–
23; market power and, 219; overview
of, 193–99; risk of systemic failure
and, 199–217; stabilization effects of,
217–23
- Bank contagion risk: measure of, 138–39;
results for, 148–57; time variation of,
161–68
- Bank deposit change, 113–14
- Bank holding companies (BHCs), 38–46;
summary statistics for, 39, 40t, 41t;
trading performance of, 54, 55t; trad-
ing revenues for, 46–48, 47t
- Banking sector: capital regulation and sys-
temic risk in, 356–66; hedge funds and,
309–18
- Banking system fragility, overview of,
193–99
- Banking system risk: aggregate, 157–61;
changes in, 161–71
- Banking system stability: aggregate banking
system risk and, 157–61; assessing,
134; bank contagion risk and, 148–57;
cross-Atlantic comparison of, 155–57;
data and descriptive statistics for, 143–
48; data for, 143–48; estimation of in-
dicators of, 139–41, 173–75; in Euro
area, 149–55; hypotheses for, 141–43;
indicators of, 137–39; overview of,
133–37; test for time variation in in-
dicators of, 176–77; volatility modeling
and analysis of, 184–85
- Bank of England, 341
- Bank panics, 1, 235–36
- Bankruptcy, SPVs and, 557–58
- Banks: cheating and, 399; costs of recapital-
ization for, 395–97; liquidity risks and,
105–8; model of, 387–94; risk-based
capital requirements for, 397–402;
securitization effects on overall default
risk of, 615–19
- Bank trading revenues, 62–66; on days of
large market moves, 80–84; densities
for, 63, 63f; descriptive statistics for,
63–64, 64t; 10 percent lowest and high-
est values for, by historical dates, 64–
66, 65f
- Bank trading risks: factor model with vary-
ing positions for, 66–71; overview of,
59–62; random coefficient model for,
71–77; rolling regressions for, 77–80
- Basel Committee on Banking Supervision,
30, 380–82. *See also* New Basel Accord
- Basel Market Risk Amendment (MRA), 62
- Basel market risk charge, 32

- Bootstrapping, 538
 Business cycle shocks, 459–63
 Business risks, 11
- Capital regulations, 21–22; increased systemic risk from, for banking sector, 356–66. *See also* Regulation
 Cash flow at risk (CaR), 11, 11n16
 Cheating, banks and, 399
 Collateral invested amount (CIA), 565
 Collateralized bond obligations (CBOs), 603
 Collateralized debt obligations (CDOs)
 transactions: loss allocation in, 611–14;
 share price reactions and, 619–28;
 types of, 606
 Collateralized loan obligations (CLOs), 603–4
 Commercial paper (CP) market, U.S., 111–12
 Conditional return distributions, modeling entire, 533–40
 Conduits, 561–62
 Constant Conditional Correlation (CCC) GARCH model, 526
 Covariance matrices: high-frequency return data for, 527–33; modeling asset return, 523–27; via dynamic conditional correlation, 526–27; via exponential smoothing, 524; via Flex-GARCH, 526; via mapping to liquid base assets, 532–33; via multivariate GARCH, 524–25
 Credit default models, 422–29
 Credit derivatives, 344–45
 Credit enhancement, SPVs and, 559–60, 565
 Credit loss distribution, 429–31; simulated, 446–66
 CreditMetrics, 16
 Credit risks, 8–9; modeling, 16
 Credit risk transfer: diversification through, 346–56; institutional background on, 343–46; literature on, 342–43
 CSFB/Tremont index, 250–51, 254–59
- Daily trading revenues, 60
 Default thresholds: firm-specific conditional, 427–29; identification of, 425–27
 Deposit change, bank, 113–14
 Derivatives, 1, 2
 Diagonal GARCH model, 525
 Disclosure, unintended effects of, 19–22
 Diversification, 17–18
- Dynamic Conditional Correlation (DCC) model, 526–27
- Earnings at risk (EaR), 11, 11n16
 Electronic trading, 1
 Euro area banks: domestic vs. cross-border extreme spillover over risk among, 149–55, 150–51t, 152–53t; vs. U.S. banking system, 136–37, 155–57
 Excess spread, 464
 Extreme value theory (EVT), 135, 476
- Factor model approach, 59, 60–61; derivations, 86–90; with varying positions, 66–71
 Federal Deposit Insurance Corporation (FDIC), 235
 Federal Reserve System, 341
 Filtered Historical Simulation (FHS), 538
 Financial asset securitization investment trusts (FASITs), 550n2
 Financial contagion, 135–36
 Financial system distress: managing and risks of, 1; traditional public policy for, 1–2
 Firm value, model of, 422
 Firm value maximization, risk management and, 5–7
 Firmwide risks, measuring, 12–14
 First-loss position (FLP), 607–8
 Flex-GARCH model, 526
- GARCH. *See* Generalized autoregressive conditional hetoskedastic (GARCH) modeling
 Generalized autoregressive conditional hetoskedastic (GARCH) modeling, 15, 37, 515; volatility via, 520–23
 Glass-Steagall Act (1933), 235; repeal of, 309
 Global vector autoregressive macroeconomic model (GVAR), 419–20; empirical application of, 437–46; expected loss due to default for, 434–36; firm returns based on observed common factors linked to, 433–34; overview of, 431–32; simulating credit loss distributions for, 446–66; simulation of loss distribution for, 436
 Graveyard funds, 251–54, 251n11; liquidations and, 279–81
 GVAR. *See* Global vector autoregressive macroeconomic model (GVAR)

- Hedge funds, 1, 236, 236n1, 346; attrition rates of, 282–92; banking sector and, 309–18; CSFB/Tremont index for, 250–51, 254–59; data for, 250–51; “Graveyard” database for, 251–54; liquidations of, 274–82; literature review of, 247–50; “Live” database for, 251; logit analysis of liquidations of, 292–301; modeling risk exposures of, 237–38; *vs.* mutual funds, 271–76; nonsynchronous trading effect of, 269–70; outlook for, 325–26; phase-locking risk and, 243–47; regime-switching models for, 318–24; risk models for, 301–9; serial correlation and illiquidity for, 268–77; tail risk and, 238–42; TASS database for, 251–54, 260–67. *See also* Systemic risk
- Herding, 29; empirical approaches to theories of, 34–35; theories of, 29–30; VaR induced, 29–30
- High-frequency return data, 527–33
- Idiosyncratic risk, 463–66
- Illiquidity risk: aggregate measure of, 277–78; measuring, 267–78; serial correlation and, 268–77
- Implicit recourse, 565
- Implicit recourse equilibrium, 575–78
- Interest-rate swaps, 2
- LDCE. *See* Operational Risk Loss Data Collection Exercise (LDCE)
- Leverage, 236, 267
- Lindley’s Paradox, 296n38
- Liquidations, of hedge funds, 278–82; attrition rates and, 282–92; logit analysis of, 292–301
- Liquidity, 236, 267
- Liquidity crisis of 1998, 107, 108–13
- Liquidity risks, 10–11, 106n2; banks and, 105–8; constructing measures of, 114–16; methodology for measuring, 113–14; results of case study of, 116–25. *See also* Illiquidity risk
- Long-term Capital Management (LTCM), 1, 32, 60, 106, 109, 146, 236, 515; literature on, 249–50
- Loss data. *See* Operational loss data
- Loss distribution, credit, 429–31
- Loss distributions, estimating, 610–11
- Losses. *See* Operational losses
- Market risk charge (MRC), 31–32, 42f; data sample for, 38–39; description of, 39–46; future trading risk and, 37; properties of relative changes in, 44–45t
- Market risks, 7–8; modeling, 14–16
- Master trusts, 563–64
- Measurement technologies, 3
- Model risk, 11–12
- Modigliani-Miller theorem, for risk sharing, 354–55
- MRA. *See* Basel Market Risk Amendment (MRA)
- MRC. *See* Market risk charge (MRC)
- Multivariate extreme bank spillovers, measure of, 138–39
- Multivariate GARCH model, 524–25
- Multivariate models, 523
- Mutual funds, performance of, *vs.* hedge funds, 271–76
- New Basel Accord, 377, 420; advantages and drawbacks of, 383–87; overview of, 380–83; principles of, 382. *See also* Pillar 1; Pillar 2; Pillar 3
- Nonsocialized trusts, 564
- Nonsynchronous trading effect, 269–70
- Offering Circulars (OCs), 610n3
- Operational loss data, 478–79; descriptive analysis of, 482–85; distributions for, 479–82; fitting distributions to, 486–91; literature on, 479; statistical analysis of, 475–77; threshold analysis of, 491–99
- Operational loss distribution, aggregate, 500–503
- Operational losses, frequency of, 477
- Operational loss frequency distribution, 499–500
- Operational Risk Loss Data Collection Exercise (LDCE), 478–79
- Operational risks, 9–10; modeling, 17
- Option pricing, 29
- Panics, 1, 235–36
- Performance smoothing, 270–71
- Phase-locking risk, 243–47
- Pillar 1, 397–402; New Basel Accord and, 381; overview of, 377–78; Pillar 2 and, 402–5
- Pillar 2: New Basel Accord and, 381–82; overview of, 377–78

- Pillar 3: New Basel Accord and, 382; overview of, 377–78
- Pooling, of assets, 561, 561f
- Portfolio credit risk models, 3, 4, 8–9
- Portfolio insurance, 29
- Portfolio volatility, modeling, 514–23.
See also Volatility
- Prompt Corrective Action (PCA), 378.
See also Pillar 2
- PVDIL. *See* Value of deposit insurance liabilities (PVDIL)
- Qualified special purpose vehicles (QSPVs), 556–57
- Random coefficient model, 61, 71–77
- Real estate investment trusts (REITs), 550n2
- Real estate mortgage investment conduits (REMICs), 550n2
- Recapitalization, costs of, 395–97
- Regime-switching models, 318–24
- Regulated investment companies (RICs), 550n2
- Regulation: systemic risk and, 341–43; unintended effects of, 19–22. *See also* Capital regulations
- Return distributions, conditional, modeling entire, 533–40
- Risk-based capital regulation (RBCR), 379, 398; effect of, on welfare function variables, 399–402
- Risk buyers, 344
- Risk factor shocks, impact of, 453–59
- Risk management: firm value maximization and, 5–7; overview of, 29–30
- Risk measurement, future of, 23–24
- RiskMetrics model, 8n7, 14
- Risks: allocation of, tranching and, 605–19; business, 11; credit, 8–9, 16; established, 7–10; idiosyncratic, 463–66; market, 7–8, 14–16; measuring firm-wide, 12–14; model, 11–12; modeling, 14–17; operational, 9–10, 17; phase-locking, 243–47; range and types of, 7–12; shifting, 17–18; spillover, 136; strategic, 11; technologies for controlling, 3–5. *See also* Banking system risk; Bank trading risks; Illiquidity risk; Liquidity risks; Systemic risk
- Risk sharing, Modigliani-Miller theorem for, 354–55
- Risk shredders, 344
- Risk transparency, 21
- Rolling regressions, 77–80
- Runs, 1, 2n1, 235
- Safety-and-soundness regulatory design, 21
- Securitization: implicit recourse, 565; overview of, 561–63; SPVs and, 560–65; structure of, 563–65
- Seller's interest, 564
- Serial correlation, illiquidity and, for hedge funds, 268–77
- Sharpe ratios, 271
- Socialized trusts, 563–64
- Special purpose vehicles (SPVs), 345; accounting issues for, 555–57; bankruptcy and, 557–58; credit enhancement and, 559–60; data for testing hypotheses, 579–80; empirical tests for determining which firms securitize, 587–91; empirical tests for implicit recourse equilibrium, 580–89; hypotheses for, 578–79; introduced, 549–55; legal form of, 555; qualified, 556–57; taxes and, 558–59; theoretical analysis of, 565–79; use of off-balance sheet financing and, 560
- Spillover risk, 136
- Stock return volatility, 113
- Strategic risks, 11
- Stress tests, 15
- Swaps, 2, 2n4
- Systemic failure, risk of, bank concentration and, 199–217
- Systemic risk, 11–12, 137; changes in, 161–71; defined, 231; increased, from capital regulation, for banking sector, 356–66; modeling, 17; modern forms of, 236; regulation and, 341–43; VaR and, 30–37. *See also* Hedge funds
- Systemic stability, 22
- Tail losses, distribution of, 3–4
- Tail risk, 238–42
- Tail- β s, 135, 139, 157–61
- TASS database, 251–54, 260–67
- Taxes, SPVs and, 558–59
- Trading revenues: aggregate, 48–50, 50f; for bank holding companies, 46–48, 47f; components of, 52, 52f; empirical evidence on VaR and, 35–37; risk analysis and correlation of, 50–52, 51t; tests of

- stability in volatility of, 52, 53t; volatility of, 48, 49t
- Tranching: allocation of risk and, 605–19; of assets, 561, 561f
- Trusts: master, 563–64; nonsocialized, 564; socialized, 563–64
- U.S. banking system, *vs.* European banking system, 136–37, 155–57
- U.S. commercial paper (CP) market, 111–12
- Value-at-risk (VaR), 33f, 59; capital charge, 31–32; empirical evidence on trading revenues and, 35–37; herding, 29–30; systemic risk and, 30–37; vicious circle hypothesis, 32–34
- Value-at-risk (VaR) measures, 3–4, 29; for regulation, 20–21
- Value-at-risk (VaR) models, 8
- Value of deposit insurance liabilities (PVDIL), 386, 392, 396–97
- Variable interest entities (VIEs), 556n9
- Variance targeting, 525
- Vector error-correcting models (VECM), 431
- Volatility: modeling, of banking system stability, 176–77; modeling portfolio, 514–23; overview of, 513–14; portfolio level analysis of, 514–23; stock return, 113; of trading revenues, 48, 49t; VaR systems and, 54–56; via exponential smoothing, 518–20; via GARCH models, 520–23
