Table 1.2. Real Gross Domestic Product

[Billions of chained (1996) dollars]

Seasonally adjusted at annual rates

Warning: Do not add Chained Dollars

Bureau of Economic Analysis

Downloaded on 5/29/03 At 12:33:53 PM Published date is 5/29/2003

Note. Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Percent changes from preceding period for selected items in this table are shown in table 8.1; contributions to the percent change in real gross domestic product are shown in table 8.2.

Chain-type quantity indexes for the series in this table are shown in table

	Gross domestic product

002U	59	Other general merchandise s	20549	20674	20971
002U	60	Other store retailers	70996	71306	71138

002U 0 Note - Estimates in this table are based on the North American Industry
002U 0 Chained (1996) dollar sales series are calculated as the product of the
002U 0 and the 1996 current-dollar value of the corresponding series, divided b
002U 0 for the chain-type quantity indexes uses weights of more than one peric
002U 0 estimates are usually not additive.

1. Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.
2. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of the estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimates.
