CPS Labor Extracts

1979 - 1999

Daniel Feenberg

May 2000

<http://www.nber.org/morg.html>

Abstract

The Current Population Survey (CPS) is the government monthly household survey of employment and labor markets. It is the source of the unemployment rate announced each month in the popular press. Since 1968 public use micro data files have been available from the Bureau of Labor Statistics for external analysis. In the interest of ease of use, the NBER has prepared a CD-ROM with extracts of the files from 1979 to 1999.

The extracts include individual data for about 30,000 individuals each month for 252 months. The 50 or so variables selected relate to employment: hours worked, earnings, industry, occupation, education, and unionization. The extracts also contain many background variables: age, sex, race, ethnicity, geographic location, etc. Annual income is not among the variables - that question is asked only in March. Aside from standardizing the many different codes used by Census to indicate missing values, most variables are just as created by Census. In a few cases (noted in the documentation) we have recoded variables to enhance uniformity through time.

Credits

The first edition of these extracts was prepared by Larry Katz and Hank Farber. This edition was prepared by Daniel Feenberg, who is responsible for all errors and this documentation. Special thanks to Inna Shapiro, Jean Roth, William Gould, David Autor, Danny Blanchflower, David Macpherson, and Alida Castillo-Freeman. Suggestions and corrections should be made to Jean Roth at jroth@nber.org.

Sample:

The Current Population Survey (CPS) is a monthly survey of about 60,000 households. An adult (the reference person) at each household is asked to report on the activities of all other persons in the household. There is a record in the file for each adult person. The universe is the adult non-institutional population.

Each household entering the CPS is administered 4 monthly interviews, then ignored for 8 months, then interviewed again for 4 more months. If the occupants of a dwelling unit move, they are not followed, rather the new occupants of the unit are interviewed. Since 1979 only households in months 4 and 8 have been asked their usual weekly earnings/usual weekly hours. These are the outgoing rotation groups, and each year the BLS gathers all these interviews together into a single *Merged Outgoing Rotation Group File*. A consequence of this construction is that an individual appears only once in any file year, but may reappear in the following year.

The BLS calls these files the *Annual Earnings Files*, but we prefer the name *Merged Outgoing Rotation Groups*, because there is no information in the file on annual earnings. Only hourly or weekly earnings are recorded.

The sample is stratified to provide better estimates for minorities and smaller political jurisdictions. Weights are provided for the preparation of descriptive values and tabulations.

All persons 16 years of age or over are included in the extracts.

The Census Bureau and Bureau of Labor Statistics recently released a major update of CPS Design and Methodology, Technical Paper 63. A copy is available at <http://www.bls.census.gov/cps/tp/tp63.htm>.

CD-ROM Structure:

In the fourth edition the data are provided as a series of annual STATA .dta files. Each contains all outgoing rotation groups for a single year between 1979 and 1999. From within STATA any file can be loaded with a use statement. For example, if the CD-ROM is drive D:, then the statements:

```
set memory=32m
use d:\morg\annual\morg79
```

will load the entire 1979 file. As each year is 25-28 megabytes, you may wish to restrict the data loaded. Here is an example that retrieves two variables for January only:

with: do d:\sources\morg79.

If you append records from the next year you will get repeated observations on the same individual, and you would want to worry about your standard errors, possibly using the Huber option on the regression command.

Alternatives to STATA:

As noted, the extracts are STATA binary save files. These files are compact and portable across operating systems and hardware platforms. Users without STATA may be interested in the IBM-PC program STAT/TRANSFER. This program can translate STATA files into other formats. For example:

```
transfer morg79.dta morg79.tpt
```

will generate a file in SAS XPORT format. Among statistical packages supported are SPSS, SAS, and Systat. Database packages supported include Alpha 4, dBase, Foxbase and Clipper.

Only recent versions of STAT/Transfer will correctly read STATA files generated in non-Intel byte order, such as these.

Complete copies of the entire content of the raw data files are available from Unicon Inc.

The data dictionary:

In the dictionary below, for each variable a header line gives:

1. The variable name in the 1989 CPS documentation from the BLS, and below that the name for 1994 on.
2. The variable name in the CD-ROM STATA .dta files.
3. The range of values for that variable.
4. The years for which that variable is available.
5. The universe for non-missing values.

Following the header is a description of the variable, and the possible values it may take on. Sometimes a variable definition changes through time, which will be noted. Major changes in variable definitions have led to the creation of distinct variable name, usually by appending a two-digit year to the variable name. Small changes are tolerated and noted in the description. The source for all variable documentation is from the 1978, 1982, 1984, 1985, 1986, 1989, 1992, 1994, 1995, and 1998 versions of ``Attachment A of the Current Population Survey Interview Record Layout, BLS Microdata File, Basic Monthly Survey, (January.)'' CPS Documentation for March Survey is very different. Copies of the CPS layouts are on the CD-ROM in .PDF format, in the ./docs directory.

Miscellaneous variables

h-id	<u>hhid</u>	12 digits	79 - 95:8	all
hrhhid		15 digits	95:9 -	
	1979 - 1995	Digits 1-2	- regional office number	
		Digits 3-5	- PSU	
		Digits 6-9	- segment	
	1995 -	Digits 10-12	- household serial number	
		Digits 13-15	- Census county code	

Item 9. This is a unique household identifier. The hhid may be used to match dwelling units across years - households are not followed if they move. Due to the structure of the survey approximately 50% of units (those with minsamp equal to 4) will appear again in the next year. Be sure to check minsamp when matching, or false matches may be found. The STATA Technical Bulletin no 12 pages 7-9 contains an article by Finis Welch on matching individuals across years. Every recent CPS and Annual Demographic File (March) documentation set includes a section on merging CPS samples across years, the main point being that while matching households is supported by the household id, there are no individual identifiers before 1994, so within household matches must be done with age, intmonth, and sex. Finally, there is no matching possible between January to September 1985 and 1986, or between July to December 1984 and 1985, or between June to December 1994 and 1995, or between January to August 1995 and 1996 because of a sample redesigns.

a-lineno	<u>lineno</u>	01-99	79-	all
pulineno				

Item 18a. Person Line Number in household. Supposedly useful in matching individuals across years. Before 1994 when a household member departs other members may change line number

h-mis	<u>minsamp</u>	4 or 8	79-	all
hrmis				

Month in Sample. Each household entering the CPS is interviewed for 4 months, then ignored for 8 months, then interviewed again for 4 more months. So for any household minsamp 8 occurs exactly one year after minsamp 4. Only households in interview months 4 and 8 are asked their usual weekly earnings/usual weekly hours. So each household appears precisely twice in an outgoing rotation group, and those are the only households included in the extracts.

Hrlonglk hrlonglk 0,2 94- all

Longitudinal Link Indicator. A replacement household has no members Of the original household living at this address. Note that this variable is not very useful since it refers to a replacement with respect to the prior month, not prior year.

Replacement household	0
Continuing household	2

h-year year 79- 79- all

Interview year (last two digits).

h-month intmonth 01-12 79- all
hrmonth

Interview calendar month. Matching households in successive years should have the same intmonth. A few do not, reasons unknown.

January	01
...	
December	12

a_fnlwgt weight 0-20549 79- all
pwsswgt

This is the Final Weight. The sum of the Final Weights in each monthly survey is the US non-institutional population. The CD-ROM excludes persons under 16 years of age. The outgoing rotation group includes one-fourth of that population. So one single month MORG file is one-fourth the population 16 years of age and over, and a year of MORG would sum to 3 times that population. Zero weights appear in some years, for records of unknown function. The implied two or four (1994 on) decimals on the tapes are explicit here.

a-ernlwt earnwt
pworwgt

836-77523

79-

all

Earnings weight for all races. Used for tabulating earnings related items. Since the CD-ROM includes all persons asked earning questions, this sums to the total population each month and 12 times the population for each MORG file. This is not precisely 4 times the weight, presumably because the Census has external knowledge of the size and composition of the labor force. The implied decimals on the tapes are explicit here. I have a letter from the BLS suggesting that this weight is preferred for all purposes.

Geography

The city coding system changes in October 1985 from one based on 57 SMSA identifiers with each SMSA divided into a central city and non-central city component to a more complex system of 252 CMSA (Consolidated Metropolitan Statistical Areas) identifiers, some subdivided into as many as 12 PMSAs (Primary Metropolitan Statistical Areas) and up to 5 different Individual Central City Codes. In April of 1994 the rank codes for cities are dropped, but the MSA FIPS codes are retained. In 1995 the 1993 modification to the MSA/FIPS codes are adopted. I have been warned by the BLS that all SMSA coding for 1995 is suspect. Users should understand that the geographic coverage of metropolitan areas increases through time, and not only in Census years. Lists of metropolitan identifiers are on the CD-ROM in /docs. These values are supplied by Census until 1994, when telephone interviews start. After that the respondent is asked their address.

h-metsta	<u>smsastat</u>	1-2	79-	all
gemetsta				

Metropolitan Status Code. The status of any given location may change in 1986. Not identified was coded as 3 or -1 on the BLS tapes.

Metropolitan	1
Non-metropolitan	2
Not identified	missing

hg-msas	<u>centcity</u>	1-3	79-	all
gemsast				

Central City Code. This looks like more information than smsastat, but many records identified in smsastat are not identified here. Not Identifiable was coded as 4 or -1 on the BLS tapes.

Central City	1
Balance of SMSA	2
Non SMSA	3
Not identifiable	missing

na smsa70 1-2 79-85:9 SMSAs

1970 Census SMSA size categories. See next entry for same variable after October 1985.

3 million plus 1
 1-3 million 2
 Not identifiable missing

hg-mssz smsa80 2-8 85:10-95:9 SMSAs
 gemsasz smsa93 2-7 95:10- SMSAs

Reflects 1983 population estimates for the MSA/CMSA. In the original tape, 0 and 1 are used for missing values before 1994, then -1. In 1994 this becomes the population of the CMSA/MSA and the 2 largest categories are combined.

Not identified missing
 100,000-249,000 2
 250,000-499,999 3
 500,000-999,999 4

American Indian	3	3
Asian or Pacific Islander	4	4
Other	5	

a-reorgn ethnic 1-9 79- all
 prorigin

Item 18k. 'What is the origin or descent of ...?' This variable subdivides the Hispanic community by national origin of ancestry. Non-Hispanics were sometimes coded as 'A' or '10' on the original BLS tapes. In the extracts non-Hispanic is coded always as '8'. In 1994 only undocumented values of 11-13 appear.

Mexican American	1
Chicano	2
Mexicano	3
Puerto Rican	4
Cuban	5
Central or South American	6
Other Spanish	7
All other	8
Don't know	9

a-age age 16-99 79- all
 peage

Years of age. The CPS documentation claims that this is topcoded at 90 years of age, but values up to 99 are found for 1979-1985. For 1994 on, this is derived from a question about date of birth

a-maritl marital 1-7 79- all
 prmarsta

Item 18e. Marital status at time of enumeration. Until 1989 Widowed Divorced and separated were grouped, however in all years, <4 is married, otherwise single. In the original data 5 is used for Never Married until 1989.

Married civilian spouse present	1
Married AF spouse present	2
Married spouse absent or separated	3
Widowed or divorced (Through 88)	4
Widowed (After 88)	4
Divorced "	5
Separated "	6
Never Married	7

a-vet veteran 1-6 79- males before 1989
peafwhen then all

Item 18g. Female veterans are not distinguished until 1989. A disadvantage of the coding scheme adopted in the CPS is difficulty of adding new wars in consequence, hence no coding for the Gulf war.

Vietnam Era	1
Korean War	2
World War II	3
World War I	4
Other Service	5
Non-veteran	6

na gradeat 0-18 79-91 all

Item 18h. Highest grade of school attended. In the original BLS coding for 1979-1988 the value coded for education is one more than the actual grade, so 13 was coded for a person who has at least started the senior year of high school. In 1989-1991 the actual grade is coded, without adding one. So that senior in high school is coded as 12 in the later system. The first edition CD-ROM maintains the BLS coding system, while the second and subsequent editions recode the 1979-1988 values using the later system. **If you are accustomed to the BLS system read this paragraph closely - the old BLS coding is not used here!**

Wages

Earnings are collected per hour for hourly workers, and per week for other workers. If you want a consistent hourly wage series during entire period, you should use `earnwke/uhourse`. This gives imputed hourly wage for weekly workers and actual hourly wage for hourly workers. But check `earnwke` for top-coding. Do not use any wage data that may be present for self-employed workers.

`A$hrlywk` `paidhr` 1-2 79-93 eligible

Unedited Item 25b. 'Is ...paid by the hour on this job?' [This job is the current job from `uhourse` below.]

Yes 1
No 2

`a-hrlywk` `paidhre` 1-2 79- eligible

Edited item 25b. 'Is ...paid by the hour on this job?'

Yes 1
No 2

`a$hrpay` `earnhr` 0-9999 79-93 `paidhr=1`

Item 25c. 'How much does ...earn per hour?' (in pennies). This is truncated so that when multiplied by usual hours the result is never more than \$100,000 per year. Also, in some years a maximum of 9900 is enforced. For 1979 to 1984 `earnhr` and `earnhre` are top coded at 99.99. For 1985 on, the top code depends on hours worked and is selected so that earning per hour times usual hours is not more than 1923.07 per week. After examining the data we note that the top code is not uniformly applied. While there is always a density peak at the top code amount, a similar number of observations are generally present at higher wage rates. You are cautioned to test for wages at or above the top code, if appropriate. Tips are not included.

a-herntp earnhre 0-9999 79- paidhr=1
 prernhly

Edited Item 25c. 'How much does ...earn per hour?' (in pennies)
 Before 1989 this is always 50 cents or more. Some years this is
 limited to a range of 50 - 9900. In 1994 a value of 1 cent is
 converted to missing. The lower bound is 10 cents in 1994 but 20
 cents in 1995; 0 cents in 1996+. Top coding is the same as for
 earnhr.

a\$grwek1-4 uearnwk 0-999 79-88 eligible
 0-1999 89-93

Item 25d. Earnings per week. 'How much does...usually earn per week
 at this job before deductions?' (in dollars) Includes overtime tips
 and commissions. Use this field (or uearnwke) for hourly workers.

a-brswk uearnwke 0-1999 79-88 eligible

Edited Item 25d. Earnings per week. How much does...usually earn
 per week at this job before deductions? Include any overtime pay,
 commissions, or tips usually received. Dollars. Some with class
 'without pay' show non-zero earnings. Self-employed should not show
 earnings, but sometimes do. Source: locations 427-429 on the BLS
 tape.

 0-2885 98-

Edited or computed earnings per week in this job. Includes overtime
 tips and commissions. For hourly workers, computed Item 25a times
 Item 25c appears here. For weekly workers, edited Item 25d appears
 here. Also for 1989 on, there are no zero values, suggesting an
 undocumented change in universe. Source: for 1979-1988 this is from
 locations 417-419 then A-WERNTP until 1994 when it becomes PRERNWA.

a%uslhrs	<u>I25a</u>	0-4	79-	eligible

a%hrspay	<u>I25c</u>	"	79-93	"
pxhernal				
a%grswk	<u>I25d</u>	"	"	paidhr=1
prwernal				

These are allocation flags for the items I25a through I25d. An item may be edited but not allocated, i.e. a correction. In the pre 1989 tapes 'not allocated' is indicated by a missing value indicator. This has been changed to 0 on CD-ROM for consistency with the 1989 on coding. I25a > 0 always means that usual hours are allocated on the CD-ROM in any year. Note that STATA variable names are case sensitive.

Not allocated	0
allocated	1

For 1989 to 1993 the coding scheme is:

No change	0
Value to blank	1
Blank to value	2
Value to value	3
Allocated	4
Value to value - no error	5
Refusal to value, allocated	
- no error	6
Blank to NA - no error	7
Blank to NA - error	8

I25c never shows a value of 4. For 1994 and beyond allocation flags range from 0 to 53. Non-zero values signify allocated data. The types of allocations are in an appendix to the CPS documentation. Values between 23 and 33 indicate allocations based on a prior month interview in the same household, other allocations are less reliable.

Employment

For the employed, current job is the job held in the reference week (the week before the survey). Persons with 2 or more jobs are classified in the job at which they worked the most hours during the reference week. The unemployed are classified according to their latest full time job lasting two weeks or more or by the current job (full or part-time). The industry and occupation questions are also asked of departing rotations (dp) not in the labor force who have worked in the last five years. The universe for I&O is all private workers for pay, as defined by the edited class of worker variable. The universe for class of worker variables is approximately those in the labor force, or who have been in the labor force within the last 5 years (1989-1993). For 1994 onward the universe includes those in the labor force or worked within last year. In some years non-workers may be in the universe only if their past job was full-time.

a\$clswkr	<u>class</u>	1-8	79-93
a-clswkr	<u>classer1</u>	1-8	89-93
peiolcow	<u>class94</u>	1-8	94-

Item 23e, class of worker. Class and classer1 have the same coding, a-clswkr is the edited version of a\$clswkr. Note that the years of availability are not the same. Class94 has a new coding to distinguish between non-profit and for-profit employment. Other changes are gratuitous. Some 'without pay' show earnwke positive.

	class & classer1	class94
Private, for profit	1	4
Private, non-profit	1	5
Federal Government	2	1
State Government	3	2
Local Government	4	3
Self-employed (incorporated)	5	6
Self-employed (not incorporated)	6	7

Working without pay		5		NILF
Unavailable for work		6		NILF
Other (Includes Retired)		7	5,7	NILF

na ind70 17-937 79-82

This is the 3-digit Industry Classification from the 1970 Census. See Appendix A for codes. This variable is present on the BLS tape in 1983, but is not to be relied on and is not included in the extracts.

a-ind ind80 10-991 83-
peiolicd

Item 23b. This is the 3-digit Industry Classification Code from the 1980 Census. See Appendix B for codes. The universe is unclear but seems to be all those working or who have worked in the last five years (1983-1988) or last year (1994 onward).

dind 1-52 79-

This is an NBER created 2-digit Detailed Industry Classification Code that is consistent over all the years covered. See appendix A. The BLS supplied 2-digit industry codes are so inconsistent with 3-digit data that they have been dropped from the CD-ROM extracts.

na occ70 1-984 79-82 see ind70

This is the 3-digit Occupational Classification from the 1970 Census. 'What kind of work was ... doing?' This variable is present on the original tape in 1983, but is not to be relied on for that year. See Appendix C for codes.

a-occ occ80 3-905 83-
peiolocd

This is the 3-digit Occupational Classification from the 1980 Census. 'What kind of work was ... doing?' See Appendix D for codes. Changes after 1991 are noted in Appendix F.

na docc70 0-44 79-82

This is the 2-digit Detailed Occupation Recode from the 1970 Census. See Appendix C for codes. For 1983 the CPS documentation shows a field with this definition, but the contents of the field are inappropriate.

a-dtocc docc80 1-46 83-
prdtoccl

This is the 2-digit Detail Occupation Recode from the 1980 Census. The 1979-1982 3-digit classification would not easily be coded into this form.

a-ernel eligible 1-2 79:5- all
prerelg

Eligibility Flag. This flag marks non-self-employed workers for pay. In the original files "1" always marks a private worker for pay, but the alternative may be "0" or missing, depending on the year. For the CD-ROM these later values are translated to "2" for consistency. Note that this variable starts in mid- 1979.

Earnings eligible 1
other 2

a-majact activlwr 1-7 79-88 all
1-8 89-93

Edited Item 19. 'What was...doing most of LAST WEEK?' (Major Activity)

Working 1
With a job 2
Looking for work 3
Keeping house 4
At school 5
Unable to work 6
Other/retired 7

After 1988, other is split into two categories:

Retired 7
Other 8

a\$majact doinglw 1-8 8 all

Unedited and unallocated Item 19. 'What was...doing most of LAST WEEK?' Codes are the same as a-majact above.

a-hrs1 hourslwa 0-99 79-93 working

Unedited Item 20a. 'How many hours did...work last week at all jobs?'

a\$uslhrs uhours 0-99 79-93 eligible

Unedited Item 25a.' How many hours per week does...USUALLY work at this job?' (Main job)

a-uslhrs uhourse 0-99 79- eligible
peernhro

Edited Item 25a. 'How many hours per week does...USUALLY work at this job?' [1989 through 1993 the range is 1-99.] The allocation flag for this variable is noted with the earnings variables above. For 1994 on the answer 'hours vary' is translated to missing in the extracts.

a\$uslft uhours35 1-2 79-93 ESR=1&item 20a<35

Unedited and unallocated Item 20c. 'Does...USUALLY work 35 hours or more a week at this job?' Part 1.

Blank	missing
Yes	1
No	2

a-hrs1 hourslw 1-99 79- working
pehractt

Edited item 20a. 'How many hours did...work last week at all jobs?' For 1994 and after this is allowed to go to 198 hours on the original tape. This is truncated on the CD-ROM.
