B. f. fuscipes (Wiegmann) *B. f. fuscipes* (Wiegmann)

The figure consists of five panels arranged horizontally, representing a sequence of DNA gel electrophoresis images. Each panel shows a gel with a central vertical line and horizontal lines for lanes and markers. The lanes are labeled 1 through 5 from left to right. In each panel, there are three distinct bands of varying intensity at positions 10, 11, and 12. As the number of units increases from 1 to 5, the intensity of these bands also increases. The labels '1', '2', '3', '4', and '5' are positioned to the left of the first lane of each panel, indicating the concentration of the reagent added.

1. Length dimensions, (1) Mill and inches (state imperial fractions), Φ_{mm} , in mm.

(9) Total shift (want)

(a) Transfer to next level

(4) *Initial result of wavelength (cont.)*

(a) 1000 nm wavelength (nm)
