USING THE SURVEY OF INCOME AND PROGRAM PARTICIPATION FOR RESEARCH ON THE OLDER POPULATION

INTRODUCTION

Answering policy questions about the elderly and their role in American society has been hampered by the specialized nature of existing data sets which often are not designed to simultaneously measure a variety of social, economic, and health characteristics and changes in these characteristics over time. The Survey of Income and Program Participation (SIPP) is a source of very detailed data on the social, economic, and health characteristics of the population, including information on eligibility and participation in government transfer programs, and thus is a rich source for research on the older population.

SIPP, first administered in October 1983, is a nationally- representative household survey that provides detailed, longitudinal information on income, living arrangements, disability, assets and liabilities, government transfer program eligibility and participation, pension coverage, taxes, and many other characteristics of individuals. The longitudinal design of the survey allows for the study of changes in characteristics such as marital status or living arrangements and the relationship of such changes to other characteristics, for example, income or program participation. Survey data can be used to assess future program coverage and costs and to determine the effects of proposed changes in program eligibility rules and benefit levels.

This paper describes the survey, demonstrates potential uses of SIPP data in gerontological research, and provides some insight into the strengths and weaknesses of these data for social research and policy analysis for the older population.

CHARACTERISTICS OF THE SURVEY

SIPP is a longitudinal survey of a nationally-representative sample of the civilian noninstitutionalized* population aged 15 and over. Respondents are interviewed eight times over a 32-month period, or once every four months. A new sample, or panel, is introduced in February of each year. Each panel consists of approximately 15,000 households or 32,000 persons.

Information is collected on a wide range of demographic, economic, and social characteristics. The survey has been designed specifically to increase the accuracy of economic data collected by asking detailed questions frequently and to provide data on changes in characteristics by interviewing respondents over a period of two and two-thirds years.

*The sample is similar to the March Current Population Survey (CPS) sample in that it includes members of the Armed Services not living in barracks. However, it differs from the CPS in that persons remain in the sample even if they move to an institution such as a nursing home.

Every four months, respondents are asked to update information on social and demographic characteristics and to report on each source of income for each of the previous four months. This design ensures a short recall period to improve the accuracy of responses as well as providing monthly data to cumulate to annual individual and household income figures. By asking the respondent to report on each income component separately, there is less chance that minor income sources will be left out.

Monthly data is collected for 56 income sources including:

- Wage and salary earnings
- Self employment earnings
- Social Security benefits
- Supplemental Security income
- Unemployment compensation and supplemental benefits
- Temporary sickness or disability benefits
- Aid to Families with Dependent Children
- Civil Service pensions
- Military retirement benefits
- Interest income from several asset types
- Rental and royalty income

Appendix A lists all the types of income collected.

In addition to the monthly data, topical modules are administered periodically during the survey. Topical modules represent an excellent resource for research on the aged because they address in depth topics of particular interest to this research community. Subjects for topical modules include:

- Health and Disability
- Pension Plan Coverage
- Retirement Plans and Expectations
- Employee Benefits
- Marital History
- Fertility History
- Work History
- Taxes
- Educational Financing
- Asset Holdings

Appendix B shows the 1984 and 1985 schedule of topical modules and Appendix C describes content detail for both core data and topical modules.

SIPP data products are released in a three-stage process. The first products are the core data--those questions asked repeatedly across time-- on an interview-by-interview basis. These files represent four months of data for each individual. Second to be released are data from the various topical modules--questions centering on particular subjects. Finally, longitudinal files of core data are released. These files contain several months of data from multiple interviews and differ from the initial release because the data are edited to eliminate obvious inconsistencies and the imputation system takes advantage of information collected in subsequent interviews.

SIPP AND RESEARCH ON AGING

Both the content and sample size of SIPP make it a useful data set for policy analysis and social research on aging issues. In the first interview of the 1984 SIPP panel, there are over 11,000 sample cases aged 55 and over and more than 6,000 cases 65 and over (see Table 1). There are over 6,000 veterans. Limitations of the sample size are discussed below.

Each of the SIPP data products described above can be used to address particular research issues in the field of aging.

Single Interview Data

Several issues on aging call for the initial estimation of the number of persons with particular characteristics or participating in particular programs. For example, in analyzing the impact of changes in medicare copayments, it might be useful to know the number of medicare recipients who have insurance other than medicare (Table 2). Questions like this which require only a single observation can be readily analyzed using SIPP wave or interview files. Other issues which can be addressed by SIPP cross-sectional data include the definition of retirement, labor force participation of the retired, and characteristics of the retired such as education or living arrangements. SIPP collects several retirement-related variables including: ever retired, pension income (Table 3), and Social Security benefits. In addition, SIPP collects detailed information on the relationships of persons living in the same household as well as the demographic characteristics of all individuals.

Topical Module Data

As noted above, topical module data address topics that are especially germane to gerontological studies. For example, the Health and Disability module included questions on health conditions for which respondents needed assistance, daily activities, visits to doctors and hospitals, and health insurance coverage. Health and disability data could be used in conjunction with data on the labor force activities of retired persons. Other possibilities include examinations of data on retirement plans in the context of current earnings and family status and migration and household living arrangements before and after retirement. These are just a few examples of possible uses of topical module data.

Longitudinal Data

There is considerable interest in annual data from the SIPP as well as data for longer time periods and these data offer the greatest promise of this survey.* There are several types of questions that can be addressed using these data but this discussion is limited to two: transition analysis and event-oriented analysis.

Transition analysis confronts issues of persons moving from one status to another and the attending characteristics of that move. For example, the transition to social support programs is likely to be associated with change in a number of other characteristics. In the short term, these transitions would be the movement in-and-out of institutions or the movement on-or-off particular social programs. From a larger perspective, one might want to look at the depletion of assets during retirement or following a sudden illness.

Event analysis, rather than looking at transitions at a point-in-time, focuses on events and the characteristics in months or years later. For example, one might look at the event of widowhood and the widow's economic characteristics at some later points in time to examine the particular economic hardships associated with the death of a spouse.

* Longitudinal data present another problem for researchers, that of consistency or reliability. The repetition of the same questions over a period of time frequently results in inconsistent answers due to respondent error. The Census Bureau is working on procedures for editing longitudinal data in order to minimize such inconsistencies but much work remains to be done.

LIMITATIONS OF SIPP

One of the major limitations of SIPP for many researchers may be the sample size. Although there are over 41,000 sample cases aged 55 and over, any analyses by race or detailed age groups (the very old, for example) could be limited (see Table 1). The sample is too small for statistically reliable analysis by age groups beyond 75 and over.

One possible solution would be to supplement the sample of elderly by using Medicare records. The cost of supplementation depends on the age detail desired and the level of reliability required; for example, if the sample was increased to provide statistically reliable data for age groups 75-84, and 85 years and over, the cost would be about \$2 million annually.

Another possibility would be to continue interviewing the elderly beyond the usual 32-month interview schedule ("panel extension"). This would extend the period of analysis and allow a better understanding of those life processes that take longer to manifest than several years. The additional cost would depend on the number of interviews and could be done in conjunction with an expansion of the elderly sample.

Further, a topical module on issues specific to the elderly (for example, on the extent to which families help the elderly and vice versa, see Table 4) could be designed for an augmented elderly sample. The major limitation to the use of data from topical modules is that the modular data must be linked to one of the cross-sectional core interview files in order to get current income and labor force information. The four-month period to which the module file is linked may or may not be appropriate for the research issue under study.

While SIPP provides the most detailed information available about the status and program participation of the U.S. population, it cannot recreate the economic history of the respondents. But because social security number is collected, SIPP can be supplemented with administrative records such as the Master Beneficiary Records (MBR) of the Social Security Administration. Then many issues about the economic behavior of individuals over time could be addressed. For instance,

- how does the level of assets and income of the retired vary with their earnings history?
- how do the assets and income of the nonaged with different earnings histories vary and what are the implications for them as they age?
- to what extent does the relative economic status of people remain the same throughout their lives?

SUMMARY

In summary, SIPP is especially useful in the study of the noninstitutional elderly population because it is longitudinal, it follows changes in living arrangements including movement into and out of a nursing home, and in addition to the usual demographic and social characteristics, the survey asks about both health and income. This makes it possible to analyze the effects of social and economic status on health. Health questions include activities of daily living, health conditions which cause the need for help, family members who help, hospital and other medical visits, and health insurance. The income information is the most detailed available and includes separate questions on the various types of assets and pension payments, lump-sum payments, money from relatives and friends, government programs, and so forth. Even with the limitations of sample size, SIPP offers in-depth analysis of a wide range of issues important to the older population and to America as an aging society.

APPENDIX A

Types of Income Recorded in SIPP

Wage or Salary Income

Income from Job #1
Income from Job #2

Self-Employment Income

Income from Business #1
Income from Business #2

Program and Miscellaneous Income (General Amounts Type 1)

- 1 Social Security
- 2 U.S. Government Railroad Retirement pay
- 3 Federal Supplemental Security Income (SSI)
- *4 State Supplemental Security Income (State administered SSI only)
- 5 State Unemployment compensation
- 6 Supplemental Unemployment Benefits
- 7 Other unemployment compensation (Trade Adjustment Act benefits, stride pay, etc.)
- 8 Veterans compensation or pensions
- *9 Black lung payments
- 10 Worker's compensation
- *11 State temporary sickness or disability benefits
- 12 Employer or union temporary sickness policy
- 13 Payments from a sickness, accident, or disability insurance policy purchased on your own
- 20 Aid to Families with Dependent Children (AFDC, ADC)
- 21 General assistance or General relief
- *22 Indian, Cuban, or Refugee Assistance
- 23 Foster child care payments
- 24 Other welfare
- 25 WIC (Women, Infants and Children Nutrition Program)
- 26 Food Stamps
- 28 Child support payments
- 29 Alimony Payments
- 30 Pension from company or union
- 31 Federal Civil Service or other Federal civilian employee pensions
- 32 U.S. Military retirement pay
- *33 National Guard or Reserve Forces retirement
- 34 State government pensions
- 35 Local government pensions
- 36 Income from paid-up life insurance policies or annuities
- 37 Estates and trusts
- 38 Other payments for retirement, disability, survivor
- 40 G.I. Bill/VEAP education benefits
- 50 Income assistance from a charitable group
- 51 Money from relatives or friends
- 52 Lump sum payments
- 53 Income from roomers or boarders
- 54 National Guard or Reserve pay
- 55 Incidental or casual earnings
- 56 Other cash income not included elsewhere
- 75 Five types (asterisked above) combined

Asset Income (General Amounts Type 2)

- 100 Regular/passbook savings accounts in a bank, savings and loan or credit union
- 101 Money market deposit accounts
- 102 Certificates of Deposit or other savings certificates
- 103 NOW, Super NOW, or other interest-earning checking accounts
- 104 Money market funds
- 105 U.S. Government securities
- 106 Municipal or corporate bonds
- 107 Other interest-earning assets
- 110 Stocks or mutual fund shares
- 120 Rental property
- 130 Mortgages
- 140 Royalties
- 150 Other financial investments

Noncash Income (other than WIC and Food Stamps)

- Public housing occupancy
- Rent subsidies
- Energy assistance
- Subsidized school lunches or breakfasts
- Medicare
- Medicaid

*These 5 types of benefits are combined into a single category (#75) on the public-use microdata file to avoid increasing the risk of individual disclosure.

Appendix C.

Selected Detailed Fields From the SIPP 1984 Panel
Control Card, Core, and Topical Modules 1/, 2/

SIPP Control Card

For all individuals

Age
Sex
Race
Marital status
Highest school grade attended and completed
Armed Forces status (past service and current status of military
personnel not in barracks)
Ethnic origin
Relationship to householder

SIPP Core

For all individuals

Job during reference period

For individuals who did not have a job during one or more weeks in the refer-
ence period and did not look for work and were not on layoff when they did not
have a job

Wanted a job
Reason not looking for a job
Available for work

For individuals with a job or who looked for work or on layoff during any week
of the reference period

Specific weeks with a job or business
Number of full weeks absent without pay
Specific weeks looked for work or an layoff
Usual hours worked per week
Weeks worked less than 35 hours (for individuals who usually
worked 35 hours or more)

1/ This appendix was prepared by Sheldon E. Haber of George Washington
University and the Population Division, Bureau of the Census.

2/ This appendix contains data elements for individuals, but many of the data
elements can also be tabulated for households and families.

Worked for an employer (includes unpaid workers in a family business)

Number of different employers during reference period

Hours usually worked (this and the following questions are asked of up to two employers)

Industry

Occupation

Class of worker

Paid by the hour

Regular hourly pay rate

Pay received from job during each month and the entire 4-month reference period (includes tips, commissions, overtime pay, and bonuses)

Beginning and end date of employment (for individuals employed less than the entire 4-month reference period with the same employer)

Self-employed

Hours usually worked (this and the following questions are asked for up to two businesses)

Industry

Occupation

Legal form of organization and number of persons working for the business including owners and unpaid family workers (asked for businesses with expected gross sales and receipts of \$1,000 or more during the next 12 months)

Other owners of business in household (asked for partnerships and incorporated businesses)

Amount of income received from business during each month and the entire 4-month reference period (asked of sole proprietors and each partner (in household) of an unincorporated or incorporated business)

Net profit (or loss) of business (asked only for sole proprietorships and partnerships)

For all individuals

Program participation

Rental unit owned by a local housing authority

Rent lower because government pays part of the cost

Receive energy assistance

Children receive free or reduced-price school breakfasts or lunches

Health plan coverage during reference period

Covered by a health plan in own name

Health plan provided by an employer or union

Employer or union pays for part or all of cost

Individual or family plan

Covered by a health plan under someone else's name

Sources and amounts of income during reference period
 (e.g., Social Security; SSI; State unemployment compensation; worker's compensation; Aid to Families with Dependent Children (AFDC); general assistance or relief; food stamps; alimony and child support payments; union or company pension; military retirement pay; Federal, state, or local government pension; GI bill; money from relatives or friends, and income from roomers or boarders)

Types of assets owned and amount of income from assets held in own name and (if there is a spouse) held jointly with spouse during the reference period

(e.g., savings accounts, money market deposit accounts, certificates of deposit, NOW accounts, money market funds, U.S. Government securities, municipal or corporate bonds, ^{3/} stocks or mutual fund shares, rental property, mortgages, or royalties)

Wave 3

Education History

For individuals age 16 and over

Received a high school diploma or GED
 High school program of studies (e.g., academic, vocational, business) (this and the following questions are asked of individuals who attended at least 4 years of high school)
 Subjects in high school (e.g., algebra, 3 or more years of English, 2 or more years of a foreign language)
 Public or private high school

For individuals who attended college for at least one year

Highest degree beyond high school (e.g., Ph.D., professional degree, M.A., B.A., Associate degree, vocational certificate)
 Year in which first attended college
 Calendar year in which highest degree received
 Field of study of highest degree

^{3/} Amount of interest earned on all interest earning assets is reported as a single figure.

Training 4/

For individuals under 65 years of age

Ever received training to help people find a job, improve job skills, or learn a new job 4/

For individuals under 65 years of age who have ever received training

Training used on job

Source of training (e.g., formal school setting, training program at work, previous job, apprentice program, military-- multiple entries possible)

Source of most recent training (references one of the entries in the source of training question)

Year most recent training received

Length of most recent training program

Who paid for most recent training (e.g., self or family, employer, Federal Government)

Participated in Federal training program after January 1, 1982 (Comprehensive Employment Training Act, other training programs)

Work History

For individuals who worked for an employer during the reference period

Number of employees at work site (under 25, 25-99, 100 and over) (this and the following questions are also asked of individuals who last worked at a paid job for 2 or more consecutive weeks in 1983 or 1984) 5/

Employer operates at more than one location

Number of employees at all locations

Member of a labor union

Job covered by a union contract

Tenure with employer (this and the following questions are also asked of individuals who are self-employed during the reference period)

Tenure in occupation

Usual hours worked per week

Rate of pay at start of job

4/ Training questions also asked in Wave 6, but reference period restricted to "past year" vs. "ever received training", except for persons not answering Wave 3 training questions, in which case respondents are asked if they ever received training.

5/ Industry and occupation asked of individuals who last worked at a paid job lasting 2 or more consecutive weeks in 1983 or 1984.

Previous job (asked of individuals age 21 and over who worked fewer than 10 years with their employer)

- Industry
- Occupation
- Worked for an employer or self-employed
- Year started and ended job
- Length of job interruption (between previous and current (or last) job)
- Usual hours worked per week
- Rate of pay at end of job
- Main reason for leaving job

For all individuals

- Year in which first worked at a job lasting 6 consecutive months or more
- Number of years worked 6 or more months during a year
- Typically worked full time or part time (since first working at a job lasting 6 consecutive months or more)
- Beginning and end date, duration, and reason (e.g., in school, took care of family or home, illness, could not find work) for not working 6 or more consecutive months (this is asked for four most recent work interruptions and restricted to interruptions occurring after individuals attained 21 years of age)

Health and Work Disability

For all individuals

- Health status (excellent, very good, good, fair, poor)
- Hearing, sight, or speech difficulty, or needs an aid, (e.g., a wheelchair, to get around)
- Difficulty in lifting, carrying, or walking distances or up stairs
- Needs help to get around outside or inside house, to get in and out of bed, to do light housework, to prepare meals, to look after personal needs
- Respondent or family pays for help

For individuals age 16 to 72 years with a health condition that limits the kind and amount of work that can be performed

- Year of disablement
- Employed at time of disablement
- Name of health condition responsible for work limitation
- Health condition caused by an accident or injury
- Place where accident or injury occurred (e.g., on the job, during service in Armed Forces, in home)
- Able to work regularly or irregularly (asked of individuals who worked during reference period)

For all individuals

Nights spent in hospital during last 12 months
 Nights spent in hospital during reference period
 Days spent in bed more than half a day during reference period due to illness or injury (including days while an overnight patient in a hospital)
 Visit or calls to a medical doctor or assistant during last 12 months
 Visits or calls to a medical doctor or assistant during reference period
 Health insurance pays for the complete cost of a doctor's visit (asked if individual is covered under a private health insurance plan)
 Health insurance pays hospital or doctor bills not fully covered by Medicare (asked if an individual is covered under Medicare)
 Children (under 18 years of age) have a long lasting physical condition that limits their mobility, or a mental or emotional problem that limits their ability to learn (asked of the parent or guardian of children under 18 years of age)

For individuals not covered by a health insurance plan

Reason not covered (e.g., too expensive, haven't needed health insurance, able to go to a VA or military hospital, covered by some other health plan)
 Year last covered by health insurance (asked of individuals covered by some type of private or government health insurance plan during the previous 3 years)
 Type of health insurance (e.g., private, government)
 Reason health insurance interrupted (e.g., lost job or changed employers, spouse lost job or changed employers)

Wave 4Value of Assets and Liabilities 6/

For individuals self-employed on the last day of the reference period

Percent of business owned
 Total value of business
 Total debts owned against business

6/ Also repeated in Wave 7. For additional detail, see Dawn Nelson, David McMillen, Daniel Kasprzyk, "An Overview of the Survey of Income and Program Participation," SIPP Working Paper Series, No. 8401.

For all individuals

Value of assets owned jointly with spouse and by individual respondent by type of asset (e.g., savings accounts, money market deposit accounts, certificates of deposit, NOW accounts, money market funds, U.S. Government securities, municipal or corporate bonds,⁷ stocks or mutual fund shares, rental property, mortgages)

Amount in checking accounts not earning interest

Amount owed to respondent as a result of a sale of business or property

Current value of home

Purchase price of home

Year bought

Original mortgage amount

Current value of mobile home

Purchase price of mobile home

Year, make, and model of owned vehicles (including cars, vans, and trucks) ^{8/}

Value of other vehicles if sold in present condition (including motorcycles, boats, and other recreational vehicles)

Current face value of all life insurance policies

Amounts owed jointly with spouse and by individual respondent by type of unsecured liability (e.g., bills from a store or doctor, money owed to a private individual not living in the household, debt on stock or mutual fund margin account, principal owed on rental property, bank loans (excluding mortgages, vehicle loans, brokers loans, and educational loans))

Amount owed on home

Amount owed on mobile home

Amount owed on vehicles (including recreational vehicles)

For individuals age 21 years and over

IRA and KEOGH accounts (the same questions are asked for each type of account)

Years contributed to account

Total value of account

Kind of assets held in account (e.g., certificates of deposit, money market funds, U.S. securities, municipal and corporate bonds, stocks or mutual fund shares)

^{7/} Amount of interest earned on all interest earning assets reported as a single figure.

^{8/} Value of owned vehicles imputed and contained in SIPP file.

Retirement and Pension Coverage 9/

For individuals age 40 to 65 years who worked, looked for work, or were on layoff during the reference period

Age at which expected to stop work at regular job
Years employed in jobs covered by Social Security

For individuals age 25 years and over who worked during the reference period (asked for up to two employers)

Number of employees at work site
Employer operates at more than one location
Number of employees at all locations
Employer or union retirement plan
Included in plan
Defined benefit or defined contribution plan, or profit sharing plan
Employer contributes to basic plan
Employee's annual contribution to basic plan
Years included in basic plan
Vested under basic plan
Covered by more than one person plan on job
Employer offers a 401K or 403B salary reduction plan
Participate in salary reduction plan

For individuals who are self-employed during the reference period

Covered by a pension or retirement plan (excluding Social Security, or an IRA or Keogh account) (asked for up to two businesses)

For individuals age 40 to 64 years who worked during the reference period, including the self-employed

Expect to receive retirement benefits from a previously held job
Source of pension plan (e.g., private employer; military; Federal, state, or local government; union)
Years worked at job
Expected income from pension plans (e.g., Social Security, current and past employer plans)

9/ Also repeated in Wave 7.

For individuals receiving income from a pension other than Social Security

Job from which most pension income is received
 Industry-
 Occupation
 Class of worker
 Number of employees at work site
 Employer operates at more than one location
 Number of employees at all locations
 Usual hours worked per week
 Usual weeks worked per year
 Years worked at job
 Year left job
 Annual earnings at end of job (net business income
 if self-employed)
 Year pension first received
 Defined benefit or defined contribution plan
 Reduced benefits in order to elect a survivor option
 Pension ever increased for change in cost-of-living
 Pension contains a cost-of-living adjustment
 provision
 Covered by a health plan provided by the former
 employer

Housing Costs 10/

For all individuals

Type of tenure (owned or being bought, rented for cash,
 occupied without cash payment)

For individuals who own a home or have bought a home, excluding a mobile home

First home owned
 Number of mortgages or other loans on home
 Mortgage payment (this and the following questions
 are asked for up to two mortgages or loans on home)
 Mortgage payment includes real estate taxes or
 fire insurance-
 Amount of principal owed on mortgage

10/ All questions asked of household reference person.

Year mortgage obtained 11/
 Original mortgage amount 11/
 Total number of years over which mortgage payments
 are to be made 11/
