# 2011 STATISTICS OF INCOME PUBLIC USE TAX FILE 

## INTRODUCTION

The Internal Revenue Service 2011 Public Use Tax File, which contains 163,790 records, was selected as part of the Statistics of Income program that was designed to tabulate and present statistical information for the 145.2 million Form 1040, Form 1040A, and Form 1040EZ Federal Individual Income Tax Returns filed for Tax Year 2011. The Individual Tax File is designed for making national level estimates.

The Tax Files, which have been produced since 1960, consist of detailed information taken from SOI sample records. The public use versions of these sample files are sold in an unidentifiable form, with names, Social Security Numbers (SSN), and other similar information omitted. The primary uses made of these files have been to simulate the administrative and revenue impact of tax law changes, as well as to provide general statistical tabulations relating to sources of income and taxes paid by individuals.

The 2011 Tax File can be purchased through the Internal Revenue Service, Statistics of Income Division. Any questions concerning the cost and acquisition of the current Individual Tax File should be directed to:

## DISCLOSURE AVOIDANCE PROCEDURES

To preserve the character of the microdata file while also protecting the identity of individuals, we have made the following changes to the Individual Tax File.

First, fiscal year returns have been converted to reflect the most recent year-end Tax Year and returns filed for years earlier than Tax Year 2008 have been removed from the file.

Second, returns that contain one or more amount fields with deemed extremely large values ${ }^{1}$ have been excluded from the microdata sample and are aggregated into one of four records ${ }^{2}$, identified by RECID=999996 for returns reporting negative Adjusted Gross Income (AGI), RECID=999997 for returns reporting positive AGI between $\$ 0$ and $\$ 10,000,000$, RECID=999998 for returns reporting positive AGI between \$10,000,001 and \$100,000,000, and RECID=999999 for returns reporting positive AGI of $\$ 100,000,001$ or more. The rules for identifying extremely large values are not applied to amount fields that are statutorily capped, subject to income limits, or calculated from other fields that are subject to these rules. Information regarding these aggregate returns can be found in the accompanying tabulation entitled "Weighted Counts and Sum of Amounts for Returns Used to Populate Aggregate Records".

Third, returns that were sampled as a high income no tax return, at a rate of 100 percent, have been placed back in their regular strata based on total income and subsampled at the corresponding strata rate.

Fourth, to make sure that it will be impossible to know whether a given taxpayer is represented in the sample, all remaining returns sampled at rates greater than 10 percent ${ }^{3}$ have been subsampled at 10 percent.

Fifth, those records sampled at a rate greater than 0.07 percent have been altered in the following manner:

- Alimony paid, alimony received, and State sales tax deduction have been removed.
- Marital status has been modified (see Code Definitions section for specific changes).
- Personal exemption amounts have been modified according to the phase-out limitations

and moved to other items.

- Multivariate blurring has been applied to these returns with nonzero values in at least two of the following fields: wages and salaries, state and local income taxes, and real estate taxes. Prior to blurring, these returns are grouped into one of 10 categories based on their filing status and the number of dependents, and then further grouped by the pattern of nonzero values on these three fields plus presence of Schedule C, which is used only for grouping. A multivariate distance statistic is then calculated from the nonzero values of the three variables within each group. Based on this statistic, the two most distant records are identified, and the two additional records closest to each of these two records are located. For each group of three records the average value of each variable is placed in the specific fields. This process is repeated until all records have been averaged or "blurred."

Sixth, all returns sampled at a 0.07 percent rate have been blurred on a univariate basis for the following fields: alimony paid, alimony received, wages and salaries, medical and dental expenses, real estate taxes, and state and local income taxes. Alimony paid and alimony received are blurred nationally. Prior to blurring wages and salaries, the records are grouped into one of 25 categories based on filing status, number of dependents, and sample code. Prior to blurring medical and dental expenses, the records are grouped into one of 8 categories based on age range of the primary and filing status. Prior to blurring real estate taxes, the records are grouped into one of 21 categories based on filing status, number of dependents, and sample code. Prior to blurring state and local income taxes, the records are grouped into one of 17 categories based on filing status, grouped sample code ${ }^{4}$.

Seventh, all returns filed with marital status "Surviving Spouse" have been converted to Married Filing Jointly.

Eighth, for all records on the file, the total number of dependents is capped based on filing status. For joint and head of household returns the total number of dependents shown is capped at 3, for single returns the total number of dependents shown is capped at 2 , and for married filing separately returns the total number of dependents shown is capped at 1 .

Ninth, for all records on the file, all amount fields have been rounded. Amounts, in absolute values, above $\$ 100,000$ are rounded to the four most significant digits (e.g., $\$ 228,867=\$ 228,900$

4The State of Wisconsin is grouped into one category regardless of filing status or sample code.

and $\$ 1,158,235=\$ 1,158,000$ ). Amounts between $\$ 10,000$ and $\$ 100,000$ are rounded to the nearest $\$ 100$. Amounts between $\$ 5$ and $\$ 10,000$ are rounded to the nearest $\$ 10$. Nonzero amounts less than $\$ 5$ are set to $\$ 2$, with sign retained.

Finally, all records in the file are rebalanced to ensure accounting accuracy after the above disclosure procedures are applied.

Since individual records in this file may or may not contain data from just one tax return--and never contain the full item content of any one tax return--we request that researchers make these facts clear in publishing their findings. In particular, they should refrain from using any language that would imply that they had access to individual taxpayers' records.

${ }^{1}$ Counts have been limited depending on filing status. For joint and head of household returns the limit is 3 , for single returns the limit is 2 and for married filing separately returns the limit is 1 . These limits are applied sequentially by type of dependent, starting with children living at home, then children living away from home, then other dependents, then parents.
${ }^{2}$ Counts are limited by filing status due to limits on counts of dependents.

## EXPLANATION OF FIELDS NOT ABSTRACTED DIRECTLY FROM TAX FORMS

The following explanations define data fields contained in the 2011 Public Use Tax File that have not been abstracted directly from a specific line on Forms 1040, 1040A, 1040EZ, or the accompanying schedules and forms. Field numbers not appearing in this section have been entered on the specific lines on the forms or schedules from which the data were abstracted. Refer to the "2011 Federal Tax Forms" section of this booklet for further information.

## Field

Number

## Definition

P04470 DEDUCTIONS
This is either the Total Standard Deduction or the Total Itemized Deductions found on Form 1040, line 40 . Only one can appear on each return. (Note: If the taxpayer had no income, but still included the total itemized deductions for which he/she was eligible, this amount is shown in P04470; else the standard deduction for which he/she was eligible is shown.)

## E04600 EXEMPTION AMOUNT

This is the amount found on Form 1040, line 42. This amount has been limited based on the caps on exemptions for dependents (see section on Code Definitions for specific changes) and for returns exceeding the adjusted gross income (AGI) phase-out limitations.

E05100 TAX ON TAXABLE INCOME
This is the amount shown on Form 1040, line 44 less special taxes from Form 4972 (Tax on Lump Sum Distributions).

E05200 COMPUTED REGULAR TAX
This is the amount arrived at by applying the Tax Rate Schedules to Taxable Income, without regard to the type of computation used by the taxpayer.

E06000 INCOME SUBJECT TO TAX
For taxpayers filing current year returns, "Income Subject to Tax" is identical to taxable income except for: those dependents paying "kiddie" tax from Form 8615; and those returns with qualified dividends and/or long-term capital gains taxed at or below the 28 percent rate (TXST equals 6 or 7). For dependents filing Form 8615 (TXST $=4$ or 8 ), this is the income taxed at child's rate. For taxpayers with qualified dividends and/or long-term capital gains, this is only the income taxed at the regular rates (not any capital gains that were taxed at the long-term capital gains rates of $5,10,15,25$ and 28 percent).
For prior year returns and Schedule J returns, "income subject to tax" is computed

## 2011 STATISTICS OF INCOME PUBLIC USE TAX FILE

by using the current Tax Year tax rate schedule to impute a hypothetical taxable income amount necessary to yield the given amount of tax reported.

E06200 MARGINAL TAX BASE
This is the amount of income subject to tax at the marginal tax rate applicable to the return (TXRT), using the 2011 Tax Rate Schedules for all returns. (See Income Subject to Tax).

E06300

E07200 ELDERLY OR DISABLED CREDIT
Elderly or disabled credit as reported on the 1040 (line 53c), as part of other credits.

P08000 OTHER TAX CREDITS (NOT INCLUDED IN THE OTHER CREDIT FIELDS) The sum of the amounts for Other Tax Credits on Form 1040 line 53 for which separate fields have not been listed.

E06500 TOTAL INCOME TAX
Income Tax After Credits (E08800) plus Form 4970 tax less the portion of refundable credits used to offset all other taxes (but never less than zero).

E07150 TOTAL TAX CREDITS (SOI)
Total credits from Form 1040 (line 54) plus the portion of refundable credits used to offset tax before credits.

E08800 INCOME TAX AFTER CREDITS (SOI)
Income Tax after Credits from Form 1040 (line 55) minus the portion of refundable credits used to offset income tax before credits. For Form 1040EZ, which does not allow for any credits or any other taxes, this is the same as "Total Tax Liability."

E09700 RECAPTURE TAXES
Amount shown in Form 1040, line 60 margin for Recapture of Investment Credits from Form 4255 and recapture of other credits.

E10300 TOTAL TAX LIABILITY (SOI)
Total tax liability (Form 1040, line 61, Form 1040A, line 35, Form 1040-EZ, line 10) minus Advance Earned Income Credit payments (prior year returns only) minus the portion of refundable credits used to offset income tax before credits minus the portion of refundable credits used to offset all other taxes (but never

 less than zero).E59560 EARNED INCOME FOR EARNED INCOME CREDIT
The total of earned income (salaries and wages, earned business income, and nontaxable combat pay) used in computing the earned income credit, as shown on the EIC Worksheet (found in the Instructions for Form 1040). Note that this field is computed by SOI. Taxpayers are not required to file this worksheet with their return.

E59680 EARNED INCOME CREDIT USED TO OFFSET INCOME TAX BEFORE CREDITS
This amount is the lesser of: Total Earned Income Credit or Income Tax Before Credits (E05800) minus the Making Work Pay Credit.

If Total Earned Income Credit (EIC) is greater than Income Tax Before Credits (reduced by the Making Work Pay Credit), the following fields are computed:

## E59700 - EARNED INCOME CREDIT USED TO OFFSET ALL OTHER TAXES EXCEPT ADVANCE EIC

 The lesser of:1. Total EIC minus Earned Income Credit used to offset Income Tax Before Credits (E59680); or
2. The sum of all other taxes (E09400 $+\mathrm{E} 09700+\mathrm{E} 09800+\mathrm{E} 09900)$, plus the following tax items which are not shown separately: Household employment taxes and all other taxes (margin entries on line 60).

E59720 - EARNED INCOME CREDIT, REFUNDABLE PORTION EIC minus E59680 minus E59700 (see above for definitions and conditions).

E11601 TOTAL REFUNDABLE CREDITS USED TO OFFSET INCOME TAX BEFORE CREDITS
This amount is the summation of the amount of all refundable credits used to offset income tax before credits. The refundable credits applied, and the order, were Making Work Pay Credit, EIC (E59680), American Opportunity Credit, First Time Homebuyer Credit, Regulated Investment Company Credit, Adoption Credit, Prior Year Minimum Tax Credit, and Health Insurance Tax Credit.

If the total of all refundable credits is greater than Income Tax Before Credits, the following fields are computed:

RECID RETURN ID
A unique number assigned for each sampled tax return during processing.
S006 DECIMAL WEIGHT
This field was derived by dividing the computer population count of returns in a sample stratum by the number of sample returns for that stratum (carried to two decimal places). The decimal place is implied. Estimates derived from each return record must be multiplied by this decimal weight and divided by 100.

S008 SAMPLE COUNT
The number of sampled tax returns found in the given sample code.
S009 POPULATION COUNT
The number of tax returns in the population for a given sample code.
WSAMP SAMPLE CODE
See Table B, below. The aggregated return's WSAMP has been set equal to 0 .
TXRT MARGINAL TAX RATE
Top rate from tax rate schedule that applies to income subject to tax or if the taxpayer has long-term capital gains and/or qualified dividends, possibly from the Schedule D tax worksheet. See definition for field Income Subject to Tax. Note that this field uses an implied decimal point (28.0 percent is represented by 280).

## 2011 STATISTICS OF INCOME PUBLIC USE TAX FILE

## TECHNICAL DESCRIPTION OF THE FILE

The Public Use file is available on CD in CSV format. This comma separated file contains 163,791 records where the first record consists of only field names. Field names have been ordered first by code fields followed by amount fields in the same order as presented on pages 7 through 13.

# 2011 STATISTICS OF INCOME PUBLIC USE TAX FILE SAMPLE DESCRIPTION 

This section describes the domain of the study, sample design and selection, data capture and cleaning, and the method of estimation.

## Domain of Study

The data in this file are estimates from a probability sample of unaudited Individual Income Tax Returns, Forms 1040, 1040A, 1040EZ (including electronic returns) filed by U.S. citizens and residents during Calendar Year 2012.

All returns processed during 2012 were subjected to sampling except tentative and amended returns. Tentative returns were not subjected to sampling because the revised returns may have been sampled later, while amended returns were excluded because the original returns had already been subjected to sampling. A small percentage of returns were not identified as tentative or amended until after sampling. These returns, along with those that contained no income information, were excluded in calculating estimates. This resulted in a small difference between the population total (145,601,196 returns) reported in Table A and the estimated total of all returns (145,370,240 returns). This file excludes returns older than four years (Tax Year 2007 or less), so the population that is represented is smaller (145,161,694 returns). In addition, the perfection of money amounts during Statistics of Income processing, as well as the blurring techniques used in creation of the Public Use File, may have shifted some returns from one income class to another, making it impossible to replicate Table A exactly from the Public Use sample.

The records found in this file are intended to represent all returns filed for Tax Year 2011. While most returns processed during Calendar Year 2012 were for Tax Year 2011, a few were for non-calendar years ending during 2012 and 2013, and some were returns for prior years. Returns for prior years were used in place of 2011 returns received and processed after December 31, 2012. This was done in the belief that the characteristics of returns due, but not yet processed, could best be represented by the returns for previous income years that were processed in 2012.

## Sample Design and Selection

The sample design is a stratified probability sample, in which the population of tax returns is classified into subpopulations, called strata, and a sample is selected independently from each stratum. Strata are defined by:

1. High combined business and farm total receipts of $\$ 50,000,000$ or more.
2. Presence or absence of special Forms or Schedules (Form 2555, Form 1116, Form

## 2011 STATISTICS OF INCOME PUBLIC USE TAX FILE <br> 1040 Schedule C, and Form 1040 Schedule F).

3. Total gross positive or negative income. Sixty variables are used to derive positive and negative incomes. These positive and negative classes are deflated using the Gross Domestic Product Implicit Price Deflator to represent a base year of 1991.
4. Potential usefulness of the return for tax policy modeling. Thirty-two variables are used to determine how useful the return is for tax modeling purposes.

Table A shows the population and sample count for each stratum after collapsing some strata with the same sampling rates. The sampling rates for the Public Use File range from 0.07 percent to 10 percent ${ }^{6}$.

Tax data processed to the IRS Individual Master File at the Martinsburg Computing Center during Calendar Year 2012 were used to assign each taxpayer’s record to the appropriate stratum and to determine whether or not the record should be included in the sample. Records are selected for the sample either if they possess certain combinations of the four ending digits of the social security number, or if their ending five digits of an eleven-digit number generated by a mathematical transformation of the SSN is less than or equal to the stratum sampling rate times 100,000.

## Data Capture and Cleaning

Data capture for the SOI sample begins with the designation of a sample of administrative records. While the sample was being selected, the process was continually monitored for sample selection and data collection errors. In addition, a small subsample of returns was selected and independently reviewed, analyzed, and processed for a quality evaluation.

The administrative data and controlling information for each record designated for this sample was loaded onto an online database at the Cincinnati Service Center. Computer data for the selected administrative records were then used to identify inconsistencies, questionable values, and missing values as well as any additional variables that an editor needed to extract for each record. The editors use a hardcopy of the taxpayer's return to enter the required information onto the online system. Data are also adjusted during editing in an attempt to achieve consistent statistical definitions. For example, a taxpayer may report director's fees on the other income line of the Form 1040 return. If this situation was detected during editing, the amount of director's fees was added to the salaries and wages field.

[^2]
## 2011 STATISTICS OF INCOME PUBLIC USE TAX FILE

After the completion of service center review, data were further validated, tested, and balanced. Adjustments and imputations for selected fields were used to make each record internally consistent.

In addition, all records in the Public Use Tax File are rebalanced to ensure accounting accuracy after disclosure avoidance procedures are applied.

Some returns designated for the sample were not available for SOI processing because other areas of IRS needed the return at the same time. For Tax Year 2011, 0.024 percent of the sample returns were unavailable.

## Method of Estimation

Weights were obtained by dividing the population count of returns in a stratum by the number of sample returns for that stratum. The weights were adjusted to correct for misclassified returns.

## 2011 STATISTICS OF INCOME PUBLIC USE TAX FILE

$\underline{\underline{\text { Table A.-Number of Individual Income Tax Returns in the Population and Sample by Sampling Strata for } 2011}}$

[1] This population includes an estimated 230,956 returns that contained no income information or represented amended or tentative returns identified after sampling.
[2] Each population member is assigned a degree of interest based on how useful it is for tax modeling purposes. Degree of interest ranges from one (1) to four (4), with a one being assigned to returns that are the least
interesting, and a four being assigned to those that are the most interesting. 'All' refers to income classes for which returns with all four degrees of interest are assigned.
[3] Positive and Negative Income classes are divided by a Chain-Type Price Index for the Gross Domestic Product of 1.4783 to represent a base year of 1991.

## General Instructions

## Purpose of Form

Use Form 4952 to figure the amount of investment interest expense you can deduct for 2011 and the amount you can carry forward to future years. Your investment interest expense deduction is limited to your net investment income.

For more information, see Pub. 550, Investment Income and Expenses.

## Who Must File

If you are an individual, estate, or a trust, you must file Form 4952 to claim a deduction for your investment interest expense.
Exception. You do not have to file Form 4952 if all of the following apply.

- Your investment income from interest and ordinary dividends minus any qualified dividends is more than your investment interest expense.
- You do not have any other deductible investment expenses.
- You do not have any carryover of disallowed investment interest expense from 2010.

## Allocation of Interest Expense

If you paid or accrued interest on a loan and used the loan proceeds for more than one purpose, you may have to allocate the interest. This is necessary because different
rules apply to investment interest, personal interest, trade or business interest, home mortgage interest, and passive activity interest. See Pub. 535, Business Expenses.

## Specific Instructions

## Part I-Total Investment Interest Expense

## Line 1

Enter the investment interest expense paid or accrued during the tax year, regardless of when you incurred the indebtedness. Investment interest expense is interest paid or accrued on a loan or part of a loan that is allocable to property held for investment (as defined on this page).

Include investment interest expense reported to you on Schedule K-1 from a partnership or an S corporation. Include amortization of bond premium on taxable bonds purchased after October 22, 1986, but before January 1, 1988, unless you elected to offset amortizable bond premium against the interest payments on the bond. A taxable bond is a bond on which the interest is includible in gross income.

Investment interest expense does not include any of the following:

- Home mortgage interest.
- Interest expense that is properly allocable to a passive activity. Generally, a passive activity is any trade or business activity in which you do not materially participate and any rental activity. See the Instructions for Form 8582, Passive Activity Loss Limitations, for details.
- Any interest expense that is capitalized, such as construction interest subject to section 263A.
- Interest expense related to tax-exempt interest income under section 265. - Interest expense, disallowed under section 264, on indebtedness with respect to life insurance, endowment, or annuity contracts issued after June 8, 1997, even if the proceeds were used to purchase any property held for investment.
Property held for investment. Property held for investment includes property that produces income, not derived in the ordinary course of a trade or business, from interest, dividends, annuities, or royalties. It also includes property that produces gain or loss, not derived in the ordinary course of a trade or business, from the disposition of property that produces these types of income or is held for investment. However, it does not include an interest in a passive activity.

Exception. A working interest in an oil or gas property that you held directly or through an entity that did not limit your liability is property held for investment, but only if you did not materially participate in the activity.

## Part II-Net Investment Income

## Line 4a

Gross income from property held for investment includes income, unless derived in the ordinary course of a trade or business, from interest, ordinary dividends (except Alaska Permanent Fund dividends), annuities, and royalties. Include investment income
