INTRODUCTION	1
CORE RECORD LAYOUT	4
CODE DEFINITIONS	9
EXPLANATION OF ELEMENTS NOT ABSTRACTED DIRECTLY FROM	
TAX FORMS	16
TECHNICAL DESCRIPTION OF THE FILE	19
INDIVIDUAL TAX FILE SAMPLE DESCRIPTION	20
1986 FEDERAL TAX FORMS (WITH FLEMENT NUMBERS REFERENCED)	22

The Internal Revenue Service 1986 Tax File (75,400 records) was selected as part of the Statistics of Income program that was designed to tabulate and present statistical information for the 103,045,186 Form 1040, Form 1040A, and Form 1040EZ Federal Individual Income Tax Returns filed for Tax Year 1986.

The Tax Files which have been produced since 1960 consist of detailed information taken from actual tax returns. The public use versions of these sample files are purchased in an unidentifiable form, with names, Social Security Numbers (SSN), and other similar information omitted. The primary uses made of these files have been to simulate the administrative and revenue impact of tax law changes, as well as to provide general statistical tabulations relating to sources of income and taxes paid by individuals.

The Individual Tax File is designed for making national level estimates. The 1986 Tax File can be purchased through the Internal Revenue Service, Statistics of Income Division. Any questions concerning the cost and acquisition of the current tax file should be directed to:

> Dr. Fritz Scheuren, Director Statistics of Income Division R:S Internal Revenue Service 1111 Constitution Ave., N.W. Washington, D.C. 20224 (202) 376-0216

In order to preserve the character of the microdata file while also protecting the identity of individuals, we have incorporated the following procedural changes in the Individual Tax File.

First, in order to make sure that no record can be identified with 100 percent certainty, we have subsampled our 100 percent sample at a 33 percent rate.

Second, those records that remain in our file from the 100 percent sample have been combined with other high income returns (returns with an adjusted gross income of \$200,000 or more) for the following processing changes:

As in past years, the state codes and all other geographic indicators have been removed for all high income records. Other codes and fields that have been removed include: age and blindness indicators (for both primary and secondary taxpayers), total exemptions other than age or blindness, alimony paid, and alimony received. Also, certain codes (number of age exemptions, marital status, and exemptions for children living at home) have been modified (see section on Code Definitions for specific changes).

1

Then, all of the high income returns have been sorted from largest to smallest for the field of state and local income tax deductions. In this field, for every three records, in descending order, the average state and local income tax deduction has been determined and that value has been placed in the state and local income tax deduction field for each of the three records. This has been done over that part of the sample containing non-zero values in these fields. If the last group of records contains less than three, these records have been combined with the group of three immediately before it. This method of disguising data is called blurring. The field for personal property tax deductions has also been blurred exactly as described above for all high income returns.

High income returns have then been separated into 35 different classes based on age, marital status, the number of children living at home, and the size of salaries and wages. Within each of these 35 classes, returns have been sorted on salaries and wages. This field has then been blurred over consecutive records as described above for state and local income tax deductions. However, records have only been averaged with other records in the same class. Therefore, records within one of the 35 classes have not been averaged with records in any of the other 34 classes. The file is then sorted on real estate tax deductions (again, within the 35 classes), and the same blurring procedure has been repeated for real estate tax deductions. \underline{l}'

Third, all lower income returns (records with an adjusted gross income of less than \$200,000 and not from our 100 percent sample) have been sorted by State. After this sort, the records have been blurred for real estate tax deductions, alimony paid, alimony received, and state and local income taxes (State of Wisconsin, only, for this last item) in the same manner as described above. The only difference between these records and the high income returns is that the lower income returns have been sorted for each field by individual State with no records from two different states being combined when averaging a field over a series of records.

1/For greater details on this and other disclosure protection techniques used by the Statistics of Income Division, see:

Strudler, Michael; Oh, H. Lock; and Scheuren, Fritz. (1987) "Protection of Taxpayer Confidentiality on the IRS Tax Model." <u>Statistics</u> of Income and Related Administrative Record Research: 1986, Internal Revenue Service. Fourth, for all records on the file, the following changes have been made:

The fields containing total miscellaneous deductions, other net income less loss and total taxes paid deductions have been deleted and marked as "reserved." General sales tax and general sales tax on motor vehicles have also been blurred for high income returns. Also, all fields on the file have been rounded to the four most significant digits (e.g. \$14,371 = \$14,370 and \$228,867 = \$228,900).

Individual Tax Model Files for each of the Tax Years 1966 through 1978, and State Tax Model Files for Tax Years 1977 and 1978, are available through the National Archives and Records Service. Questions concerning cost, acquisition, and delivery of these historical tax model files, should be addressed to:

> General Services Administration Machine Readable Archives Division National Archives and Records Service General Services Administration Washington, D.C. 20408 (202) 523-3267

The Archives order number for any of the above-mentioned historical Tax Model files is 374-109+(A). In addition to the order number, the requestor should also specify the tax year and version (Individual or State) of the file under consideration.

Please refer to the sections of this booklet titled "Individual Tax File Sample Description" for a more detailed discussion of the Tax File. Codes: (all codes are 2 characters in length - PIC 99)

Element Definition Number Earned Income Credit Used to Offset Income Tax Before Credits 54 This amount was computed based on the lesser of: Earned Income Credit or Income Tax Before Credits minus all credits except the Earned Income Credit. Total Tax Credits (SOI) 56 Total credits from Form 1040 (line 44 plus line 49) or 1040A (line 22) plus the amount of Earned Income Credit used to offset Income Tax before Credits. Total Income Tax 58 Element (59) plus element (61). Income Tax After Credits (SOI) 59 Income Tax after Credits from Form 1040 or 1040A minus the amount of

- Earned Income Credit used to offset income tax before credits. 60 Marginal Tax Base This is the amount of income subject to tax at the highest tax rate applicable to the return (TXRT), using the 1986 tax rate schedules
- 66 Total Tax Payments Total payments from 1040 or 1040A minus the total Earned Income Credit.

for all returns.

76-77 If Earned Income Credit (EIC) is greater than Income Tax Before Credits (E42), the following fields are computed:

76 - Earned Income Credit used to offset all other taxes. This value depends on whether the difference between EIC and EIC used to offset Income Tax Before Credit (E54) is less than the value calculated by Total Tax Liability minus Income Tax After Credits minus Advance Earned Income Credit payments.

If it is less than this value, this field equals EIC minus E54. Also, E77 equals 0. If this is not true, this field equals the value calculated by Total Tax Liability minus Income Tax After Credits minus Advance Earned Income Credit payments. Also, E77 is calculated (see below).

77 - Earned Income Credit Refundable Portion This equals EIC minus E54 minus E76 (see above for definitions and conditions).

118 Combined Capital Gains (Excluded Long-Term Gains). Sum of Line 22, Schedule D and 1.5 times Line 14, Form 1040.

TECHNICAL DESCRIPTION OF THE FILE

Each "data record" in the file, representing one tax return, is composed of 1,680 characters. Blocks are made up of 6 data records and are separated by a 3/4 inch "inter record gap" (IRG). There is no special indication at the end of a block other than the IRG, and no indication of the end of a data record.

Tape characters are recorded in either EBCDIC or ASCII on standard 2,400 foot, 1/2 inch, nine-track tape, and a density of 6,250 bytes per inch (BPI). In this mode, a 1-bit and 0-bit are recorded as signals of opposite polarity in ODD parity (a parity bit is set to 1 or 0 so that there is always an ODD number of 1-bits in a nine-bit character).

Each code and data field is numeric and defined in character format. All codes are unsigned. The data fields are signed positive or negative, whichever is appropriate, in the last character position of the field.

Codes are defined as 2 characters in length. The largest decimal value is 99 with leading zeroes. The fields in the file are 10 characters in length with leading zeroes. Weight factors are provided to accommodate either a decimal or an integer weighting system.

The file is a single data set on two tapes and is UNLABELLED (EBCDIC) or LABELLED (ASCII).

of the sample returns in the stratum were systematically given a weighting factor of 45, and 76 percent a weight of 44. The file can be weighted with either decimal or integer weights.

Processing and Management of the Sample

While the sample was being selected, the selection process was monitored by applying prescribed sampling rates for each stratum to the population count for that stratum. A follow-up was required to reconcile differences between the actual number of returns selected and the expected number.

In transcribing and tabulating the information from the returns in the sample, checks were imposed to improve the quality of the resulting estimates. Incorrect or missing entries on the sampled record were altered during statistical editing to make them consistent with other entries on the return and accompanying schedules. Data were also adjusted during editing in an attempt to achieve consistent statistical definitions. For example, a taxpayer may report director's fees on the other income line of the Form 1040 return. If this situation had been detected during statistical editing, the amount of director's fees would have been entered into the salaries and wages field to the sample record.

Quality of the basic data abstracted was controlled at the processing centers by means of a continuous verification system that used computer tests to check for mathematical errors and inconsistencies in the data. These tests were performed while the returns were still available to aid in resolving the error conditions. Prior to tabulation of the data at the IRS Data Center, additional computer tests were applied to each return record to determine the need for adjustments to the data. Also, as a further check on processing, the IRS Data Center conducted an independent reprocessing of a small subsample of the returns previously processed for the study.1/

1/ For more details on the techniques used to process the returns in the sample, particularly those steps designed to ensure the quality of the statistical data, see:

Kilss, Beth and Scheuren, Fritz. "Statistics from Individual Income Tax Returns: Quality Issues," <u>1982 Proceedings, American</u> <u>Statistical Association, Section on Survey Research Methods</u>, pp. 271-277.

Sailer, Peter; Hicks, Charles; Watson, David; and Trevors, Dan, "Results of Coverage and Processing Changes to the 1980 Individual Statistics of Income Program," <u>1982 Proceedings, American Statistical</u> Association, Section on Survey Research Methods, pp. 452-458.

Durkin, Thomas M. and Schwartz, Otto, "The SOI Quality Control Program," 1981 Proceedings, American Statistical Association, Section on Survey Research Methods, pp. 478-483.

FIELD NUMBERS

Field Numbers presented on the tax forms and schedules lines can be used to cross reference to the Core Record Layout. An example of this is line 7 on the Form 1040 which has a field number of 2.

7 Wages, salaries, tips, etc.----- 2

On the Core Record Layout it would appear as 2 to the left of the Salaries and Wages line. See example below.

-- Core Record Layout --

- 1. ADJUSTED GROSS INCOME (DEFICIT) (AGI) (+/-)
- 2. SALARIES AND WAGES 2/
- 3. INTEREST RECEIVED

4. DIVIDENDS RECEIVED

Another example, Line 8, Interest Income, on the Form 1040 (see below) has a field number of 3. This field number is cross referenced to the Interest income line on the Core Record Layout, which contains the number 3 to the left of the line (see above).

8 Interest Income ----- 3

Names as shown on Form 1040

Figure your earned income Step 1

			(a) You		(b) Your spouse
1	Wages, salaries, tips, etc., from Form 1040, line 7 (Do not include pensions or annuities reported on Form 1040, line 16 or lines 17a and 17b.)	1		1	
2	Net profit or (loss) from self-employment (from Schedules C and F (Form 1040), Schedule K-1 (Form 1065), and any other earned income)	2		2	
3	Add lines 1 and 2. This is your_total earned income	3		3	
S	tep 2 Figure your qualified earned income				
4	Add amounts entered on Form 1040, lines 25, 26, 27, and any repayment of supplemental unemployment benefits (sub-pay) included on line 31. Enter the total (see instructions below)	4		4	
5	Subtract line 4 from line 3. This is your qualified earned income. If the amount in column (a) or (b) is zero (-0-) or less, stop here. You may not take this deduction	5	138	5	
S	tep 3 Figure your deduction	<u>.</u>		<u> </u>	

6	Compare the amounts in columns (a) and (b) of line 5 above. Enter the smaller amount here. (Enter either amount if 5(a) and 5(b) are the same.) Do not enter more than \$30,000	6	139
7	Percentage used to figure the deduction (10%)	7	x .10
8	Multiply the amount on line 6 by the percentage on line 7. This is the amount of your deduc- tion. Enter the answer here and on Form 1040, line 30	8	28

Instructions

Complete this schedule and attach it to your Form 1040 if you take the deduction for a married couple when both work. You may take the deduction if both you and your spouse:

 work and have gualified earned income, and

file a joint return, and

 do not file Form 2555 to exclude income or to exclude or deduct certain housing costs, and

 do not file Form 4563 to exclude income

There are three steps to follow in figuring the deduction on Schedule W. Step 1 (lines 1, 2, and 3).—Figure earned income separately for yourself and your spouse.

Earned income. — This is generally income you receive for services you provide. It includes wages, salaries, tips, commissions, sub-pay, etc. (from Form 1040, line 7). It also includes income earned from self-employment (from Schedules C and F of Form 1040 and Schedule K-1 of Form 1065), and net

earnings and gains (other than capital gains) from the disposition, transfer, or licensing of property that you created.

Earned income does not include interest, dividends, social security benefits, IRA distributions, unemployment compensation, deferred compensation, or nontaxable income. It also does not include any amount your spouse paid you.

Caution: Do not consider community property laws in figuring your earned income.

Step 2 (lines 4 and 5).—Figure qualified earned income separately for yourself and your spouse by subtracting certain adjustments from earned income.

Oualified earned income. --- This is the amount on which the deduction is based. Figure it by subtracting the total of certain adjustments from earned income. These adjustments (and the related lines on Form 1040) are:

 Employee business expenses (from line 25).

IRA deduction (from line 26).

 Keogh retirement plan and selfemployed SEP deduction (from line 27).

 Repayment of sub-pay included in the total on line 31. See the instructions on repayment of sub-pay on page 12 of the Form 1040 Instructions.

Enter the total of any adjustments that apply to your or your spouse's earned income in the appropriate column of line 4.

Step 3 (lines 6, 7, and 8). --- Figure the deduction based on the smaller of:

 the qualified earned income entered in column (a) or (b) of line 5, whichever is less. OR

• \$30,000.

Example.—You earned a salary of \$20,000 and had \$3,000 of employee business expenses (Form 1040, line 25). Your spouse earned \$17,000 and had an IRA deduction of \$1,000 (Form 1040, line 26). Your qualified earned income is \$17,000 (\$20,000 minus \$3,000) and your spouse's is \$16,000 (\$17,000 minus \$1,000). Because your spouse's qualified earned income is less than yours, the deduction is figured on your spouse's income. Therefore, the deduction is \$1,600 (\$16,000 x .10).
