RELATION OF THE DIRECTORS TO THE
WORK AND PUBLICATIONS OF THE
NATIONAL BUREAU OF ECONOMIC RESEARCH

1. The object of the National Bureau of Economic Research is to ascertain and to present to
the public important economic facts and their interpretation in a scientific and impartial manner.
The Board of Directors is charged with the responsibility of ensuring that the work of the National
Bureau is carried on in strict conformity with this object.

2. The President of the National Bureau shall submit to the Board of Directors, or to its Ex-
ecutive Committee, for their formal adoption all specific proposals for research to be instituted.

3. No research report shall be published by the National Bureau until the President has sent
each member of the Board a notice that a manuscript is recommended for publication and that in
the President's opinion it is suitable for publication in accordance with the principles of the Na-
tional Bureau. Such notification will include an abstract or summary of the manuscript's content
and a response form for use by those Directors who desire a copy of the manuscript for review.
Each manuscript shall contain a summary drawing attention to the nature and treatment of the
problem studied, the character of the data and their utilization in the report, and the main conclu-
sions reached.

4. For each manuscript so submitted, a special committee of the Directors (including Direc-
tors Emeriti) shall be appointed by majority agreement of the President and Vice Presidents (or by
the Executive Committee in case of inability to decide on the part of the President and Vice
Presidents), consisting of three Directors selected as nearly as may be one from each general divi-
sion of the Board. The names of the special manuscript committee shall be stated to each Director
when notice of the proposed publication is submitted to him. It shall be the duty of each member
of the special manuscript committee to read the manuscript. If each member of the manuscript
committee signifies his approval within thirty days of the transmittal of the manuscript, the report
may be published. If at the end of that period any member of the manuscript committee withholds
his approval, the President shall then notify each member of the Board, requesting approval or
disapproval of publication, and thirty days additional shall be granted for this purpose. The
manuscript shall then not be published unless at least a majority of the entire Board who shall have
voted on the proposal within the time fixed for the receipt of votes shall have approved.

5. No manuscript may be published, though approved by each member of the special
manuscript committee, until forty-five days have elapsed from the transmittal of the report in
manuscript form. The interval is allowed for the receipt of any memorandum of dissent or reserva-
tion, together with a brief statement of his reasons, that any member may wish to express; and
such memorandum of dissent or reservation shall be published with the manuscript if he so desires.
Publication does not, however, imply that each member of the Board has read the manuscript, or
that either members of the Board in general or the special committee have passed on its validity in
every detail.

6. Publications of the National Bureau issued for informational purposes concerning the
work of the Bureau and its staff, or issued to inform the public of activities of Bureau staff, and
volumes issued as a result of various conferences involving the National Bureau shall contain a
specific disclaimer noting that such publication has not passed through the normal review pro-
cedures required in this resolution. The Executive Committee of the Board is charged with review
of all such publications from time to time to ensure that they do not take on the character of for-
mal research reports of the National Bureau, requiring formal Board approval.

7. Unless otherwise determined by the Board or exempted by the terms of paragraph 6, a
copy of this resolution shall be printed in each National Bureau publication.

(Resolution adopted October 25, 1926, as revised through September 30, 1974)

## Chapter 10
Some Secular Changes in Business Cycles

### Part II Inflation

#### Chapter 11
Five Little-known Facts about Inflation

- Fact One: Inflation is Closely Tied to the Business Cycle
- Fact Two: Food Price Inflation is Closely Tied to the Business Cycle
- Fact Three: The Wholesale Price Index is Not a Good Forecaster of Consumer Prices
- Fact Four: The Employment Ratio is a Better Indicator of Inflationary Pressures than Is the Unemployment Rate
- Fact Five: Forecasts of the Inflation Rate Have Been a Lagging Indicator of the Actual Rate

#### Chapter 12
The Cyclical Behavior of Prices

- Introduction
- A Reference Chronology for Prices
- Price Cycles and Business Cycles
- Diffusion of Price Changes
- Leads and Lags in Prices
- Prices, Costs of Production, and Profits
- The Current Situation
- The Need for Further Work

#### Chapter 13
Employment, Unemployment, and the Inflation-Recession Dilemma

- Employment and Unemployment during Recession
- The Inflation Trade-off
- Nature of the Employment Ratio
- Implications
- Technical Note 1: Long-run Changes in Employment, Unemployment, and Inflation Rates
- Technical Note 2: Correlation Analysis of Employment, Unemployment, and Inflation Rates
Chapter 14
Recession Slows Inflation 233

Preface to Second Edition

Those who have the fortitude to compare this book with the previous edition, published in 1980, will find:

- More up-to-date information on recent business cycles (Chapters 2, 3; Appendix Tables A-1 to A-6).
- A signaling system to identify the beginning and ending of recessions (Chapter 4).
- New findings on inflation (Chapters 15, 16, 18-20; Appendix Tables A-5, A-6).
- An update on leading indicators for the "big seven" countries (Chapter 6).
- A new leading index of employment and unemployment (Chapter 22).
- Three essays on current problems with our economic statistics (Chapters 18-20).

Some new material has been added in the form of postscripts to previously published chapters, drawing on current work at the Center for International Business Cycle Research. The assistance of Chantal Dubrin, Jean Maltz and other associates at the Center is gratefully acknowledged.

Several of the new chapters are the joint product of work with colleagues: Victor Zarnowitz, University of Chicago (Chapter 2 and 4);
Preface to Second Edition

John P. Cullity, Rutgers—The State University of New Jersey (Chapter 16); and Phillip Cagan, Columbia University (Chapter 20). I am doubly in their debt, first for the opportunity to work with them on the research, and now for their permission to use the results in my book.

Some of the essays reprinted here have not been up-dated. I can hardly claim that this was deliberate, nor will I admit to laziness, but I do want to suggest that the reader can take advantage of the deficiency. There is no better way to test the validity of an economic hypothesis or finding than to see whether it is confirmed by subsequent data. The title of Chapter 14, for example, says "Recession Slows Inflation." That was written in 1979. Has it continued to be true? Chapter 24, on the "Forty-Second Anniversary of the Leading Indicators" (which occurred in 1980), compares the performance of indicators between 1948 and 1975 with their performance prior to 1938. This kind of test of consistency can now be extended beyond 1975. From such an exercise students can learn not only what has happened in recent business cycles but also what is worth remembering. Again, the reader of Chapter 9, "Security Markets and Business Cycles," which was written before 1975, may be disappointed to find nothing about what happened to stock prices and interest rates since 1970. But what an opportunity to see whether they have continued to interact in the manner to which we became accustomed in the fifty years before then!
