RELATION OF THE DIRECTORS TO THE WORK AND PUBLICATIONS OF THE NATIONAL BUREAU OF ECONOMIC RESEARCH

1. The object of the National Bureau of Economic Research is to ascertain and to present to the public important economic facts and their interpretation in a scientific and impartial manner. The Board of Directors is charged with the responsibility of ensuring that the work of the National Bureau is carried on in strict conformity with this object.

2. The President of the National Bureau shall submit to the Board of Directors, or to its Executive Committee, for their formal adoption all specific proposals for research to be instituted.

3. No research report shall be published until the President shall have submitted to each member of the Board the manuscript proposed for publication, and such information as will, in his opinion and in the opinion of the author, serve to determine the suitability of the report for publication in accordance with the principles of the National Bureau. Each manuscript shall contain a summary drawing attention to the nature and treatment of the problem studied, the character of the data and their utilization in the report, and the main conclusions reached.

4. For each manuscript so submitted, a special committee of the Board shall be appointed by majority agreement of the President and Vice Presidents (or by the Executive Committee in case of inability to decide on the part of the President and Vice Presidents), consisting of three directors selected as nearly as may be one from each general division of the Board. The names of the
special manuscript committee shall be stated to each Director when the manuscript is submitted to him. It shall be the duty of each member of the special manuscript committee to read the manuscript. If each member of the manuscript committee signifies his approval within thirty days of the transmittal of the manuscript, the report may be published. If at the end of that period any member of the manuscript committee withholds his approval, the President shall then notify each member of the Board, requesting approval or disapproval of publication, and thirty days additional shall be granted for this purpose. The manuscript shall then not be published unless at least a majority of the entire Board who shall have voted on the proposal within the time fixed for the receipt of votes shall have approved.

5. No manuscript may be published, though approved by each member of the special manuscript committee, until forty-five days have elapsed from the transmittal of the report in manuscript form. The interval is allowed for the receipt of any memorandum of dissent or reservation, together with a brief statement of his reasons, that any member may wish to express; and such memorandum of dissent or reservation shall be published with the manuscript if he so desires. Publication does not, however, imply that each member of the Board has read the manuscript, or that either members of the Board in general or the special committee have passed on its validity in every detail.

6. Publications of the National Bureau issued for informational purposes concerning the work of the Bureau and its staff, or issued to inform the public of activities of Bureau staff, and volumes issued as a result of various conferences involving the National Bureau shall contain a specific disclaimer noting that such publication has not passed through the normal review procedures required in this resolution. The Executive Committee of the Board is charged with review of all such publications from time to time to ensure that they do not take on the character of formal research reports of the National Bureau, requiring formal Board approval.

7. Unless otherwise determined by the Board or exempted by the terms of paragraph 6, a copy of this resolution shall be printed in each National Bureau publication.

(Resolution adopted October 25, 1926, and revised February 6, 1933, February 24, 1941, and April 20, 1968)

Acknowledgments

I owe the publication of this volume to the urging of two friends—Gottfried Haberler and Geoffrey Moore. I did not give my consent quickly. But when I finally agreed, I did so with the conviction that even a collection of scattered essays such as this may convey something of the spirit that has long marked the National Bureau's effort to inform public policy through the disinterested study of business cycles.

The present essays are concerned with the business cycle in our rapidly changing world. They were written during a stage of life when, finding myself heavily engaged in administrative work and public affairs, I took advantage of special occasions to sum up or draw upon my scientific studies. All were written in the unique environment for business-cycle research that my revered friend and teacher, Wesley Clair Mitchell, created nearly fifty years ago, at the National Bureau. All therefore bear the imprint of his thinking and that of my other colleagues—particularly Moses Abramovitz, Solomon Fabricant, Milton Friedman, Ruth Mack, Geoffrey Moore, Anna Schwartz, and Leo Wolman—as well as my own labors. I acknowledge with gratitude the debt of learning and fellowship I owe to each of them, and also to my devoted assistants across the years—Irving Forman, Jane Kennedy, Edward Kilberg, Joyce Rose, Sophie Sakowitz, Louise Smith, and Johanna Stern.
Acknowledgments

These resurrected essays are presented as they were originally published, except for a few minor stylistic changes and several deletions to avoid any mischievous crossing of the boundary line between economic diagnosis and policy prescription. Mrs. Joan Tron assumed full responsibility for all printing arrangements and Mrs. Rose helped with the proofs. I extend my thanks to them and also to the original publishers who generously consented to the reprinting.

Arthur F. Burns
Foreword

The essays in this volume draw upon the research and thinking of an economist who has devoted his life to study of the nature and causes of prosperity and depression. The first essay, written originally for the new International Encyclopedia of the Social Sciences, captures the essence of the phenomenon of the business cycle as we now know it. The other essays illuminate that sketch, by illustrating more specifically many of its propositions and findings.

Arthur Burns has put his knowledge to the hard test of formulating business-cycle policies at the highest levels of responsibility in government. As Chairman of President Eisenhower's Council of Economic Advisers from 1953 to 1956, and as counselor to both the Executive and Legislative branches of the Federal Government since then, he has had to diagnose and to recommend. The essays in this book, therefore, represent a distillation of the factual information and insights that he brought with him to this task, as well as what he learned from it, and hence have many implications for policy. But they do not include Burns' many writings on the course he believed government should currently pursue. Thus the book seeks to diagnose, interpret, and report upon economic problems, but in keeping with the National Bureau's tradition it avoids recommending specific courses of action by
government, business, trade unions, or any other social groups.

Indeed, the reader will observe, I believe, that the book is itself a tribute to the value and practicability of subjecting economic policies to scientific scrutiny. For it demonstrates that one intensely concerned with policy can also write objectively and dispassionately about the factors that have, over a long history, brought about inflation or depression, rapid growth or economic sluggishness. It is a tribute as well to the scientific and scholarly qualities of the author.

While the reader, therefore, will not find here a specific policy pronouncement on how to achieve rapid economic growth and a high level of employment without inflation, he will become better educated about the factors that need to be considered in shaping policy toward this goal. This in fact was the fundamental purpose of a grant made to the National Bureau by the Alfred P. Sloan Foundation in 1964, which has been drawn upon to finance the publication of this report.

It is a privilege to write the foreword to a book that goes so far to achieve this purpose.

*Geoffrey H. Moore*
