## **Relation of the Directors to the Work and Publications of the National Bureau of Economic Research**

1. The object of the NBER is to ascertain and present to the economics profession, and to the public more generally, important economic facts and their interpretation in a scientific manner without policy recommendations. The Board of Directors is charged with the responsibility of ensuring that the work of the NBER is carried on in strict conformity with this object.

2. The President shall establish an internal review process to ensure that book manuscripts proposed for publication DO NOT contain policy recommendations. This shall apply both to the proceedings of conferences and to manuscripts by a single author or by one or more co-authors but shall not apply to authors of comments at NBER conferences who are not NBER affiliates.

3. No book manuscript reporting research shall be published by the NBER until the President has sent to each member of the Board a notice that a manuscript is recommended for publication and that in the President's opinion it is suitable for publication in accordance with the above principles of the NBER. Such notification will include a table of contents and an abstract or summary of the manuscript's content, a list of contributors if applicable, and a response form for use by Directors who desire a copy of the manuscript for review. Each manuscript shall contain a summary drawing attention to the nature and treatment of the problem studied and the main conclusions reached.

4. No volume shall be published until forty-five days have elapsed from the above notification of intention to publish it. During this period a copy shall be sent to any Director requesting it, and if any Director objects to publication on the grounds that the manuscript contains policy recommendations, the objection will be presented to the author(s) or editor(s). In case of dispute, all members of the Board shall be notified, and the President shall appoint an ad hoc committee of the Board to decide the matter; thirty days additional shall be granted for this purpose.

5. The President shall present annually to the Board a report describing the internal manuscript review process, any objections made by Directors before publication or by anyone after publication, any disputes about such matters, and how they were handled.

6. Publications of the NBER issued for informational purposes concerning the work of the Bureau, or issued to inform the public of the activities at the Bureau, including but not limited to the NBER Digest and Reporter, shall be consistent with the object stated in paragraph 1. They shall contain a specific disclaimer noting that they have not passed through the review procedures required in this resolution. The Executive Committee of the Board is charged with the review of all such publications from time to time.

7. NBER working papers and manuscripts distributed on the Bureau's web site are not deemed to be publications for the purpose of this resolution, but they shall be consistent with the object stated in paragraph 1. Working papers shall contain a specific disclaimer noting that they have not passed through the review procedures required in this resolution. The NBER's web site shall contain a similar disclaimer. The President shall establish an internal review process to ensure that the working papers and the web site do not contain policy recommendations, and shall report annually to the Board on this process and any concerns raised in connection with it.

8. Unless otherwise determined by the Board or exempted by the terms of paragraphs 6 and 7, a copy of this resolution shall be printed in each NBER publication as described in paragraph 2 above.

## Acknowledgments

---

It was an honor to be invited by Martin Feldstein to organize an NBER conference on asset prices and monetary policy. For the past thirty years, Marty Feldstein, in his role as president of the NBER, has encouraged lending economists to do high-quality empirical research, informed by economic theory, with relevance for policymakers. A key guarantor of the quality of this research is the NBER conference at which economists from academia, the public sector, and the private sector gather to discuss the work. The NBER conference volume is a lasting record of the conference and an influential outlet for the papers presented there. Its impact is enhanced by the publication of a group of related papers, together with informed discussion.

In this last year of Marty's tenure as president of the NBER, it is particularly appropriate to thank him for the opportunity to edit this conference volume on a key issue in monetary policy. Of course, the opportunity would not be nearly as tempting without the first-rate professional assistance of the NBER's conference and publication departments. Special thanks are due to Carl Beck, Lita Kimble, and Helena Fitz-Patrick from NBER and to Parker Smathers from the University of Chicago Press. In the early stages of the project, staff members at both the Bank of England and the Federal Reserve Board were particularly helpful in suggesting relevant topics. Finally, I would like to thank Ian Martin, a PhD student at Harvard, who served as rapporteur for the conference and made possible the publication of the general discussion.
