Relation of the Directors to the Work and Publications of the National Bureau of Economic Research

1. The object of the National Bureau of Economic Research is to ascertain and to present to the public important economic facts and their interpretation in a scientific and impartial manner. The Board of Directors is charged with the responsibility of ensuring that the work of the National Bureau is carried on in strict conformity with this object.

2. To this end the Board of Directors shall appoint one or more Directors of Research.

3. The Director or Directors of Research shall submit to the members of the Board, or to its Executive Committee, for their formal adoption, all specific proposals concerning researches to be instituted.

4. No report shall be published until the Director or Directors of Research shall have submitted to the Board a summary drawing attention to the character of the data and their utilization in the report, the nature and treatment of the problems involved, the main conclusions, and such other information as in their opinion would serve to determine the suitability of the report for publication in accordance with the principles of the National Bureau.

5. A copy of any manuscript proposed for publication shall also be submitted to each member of the Board. For each manuscript to be so submitted a special committee shall be appointed by the President, or at his designation by the Executive Director, consisting of three Directors selected as nearly as may be one from each general division of the Board. The names of the special manuscript committee shall be stated to each Director when the summary and report described in paragraph (4) are sent to him. It shall be the duty of each member of the committee to read the manuscript. If each member of the special committee signifies his approval within thirty days, the manuscript may be published. If each member of the special committee has not signified his approval within thirty days of the transmittal of the report and manuscript, the Director of Research shall then notify each member of the Board, requesting approval or disapproval of publication, and thirty additional days shall be granted for this purpose. The manuscript shall then not be published unless at least a majority of the entire Board and a two-thirds majority of those members of the Board who shall have voted on the proposal within the time fixed for the receipt of votes on the publication proposed shall have approved.

6. No manuscript may be published, though approved by each member of the special committee, until forty-five days have elapsed from the transmittal of the summary and report. The interval is allowed for the receipt of any memorandum of dissent or reservation, together with a brief statement of his reasons, that any member may wish to express; and such memorandum of dissent or reservation shall be published with the manuscript if he so desires. Publication does not, however, imply that each member of the Board has read the manuscript, or that either members of the Board in general, or of the special committee, have passed upon its validity in every detail.

7. A copy of this resolution shall, unless otherwise determined by the Board, be printed in each copy of every National Bureau book.

(Resolution adopted October 25, 1926, as revised February 6, 1933, and February 24, 1941)

Acknowledgments

This book has lived with me for so long that it has become acquainted with most of my friends—a condition as trying for the friends as it has been beneficial to the book and to me. The help has worked in two ways: it has provided counsel and astute comment; it has encouraged me to trudge on.

On both scores Geoffrey H. Moore has been entirely indispensable. Thomas M. Stanback, Jr., likewise has advised me in connection with pieces of the work in earlier writings and with the draft of the present book. F. Thomas Juster has reviewed the manuscript to its advantage. Others to whom I am grateful for help along the way include Arthur F. Burns, Moses Abramovitz, Ilse Mintz, George Garvy, James W. Angell, Neil Chamberlain, Alfred Eisenpreis, and Michael Lovell. The book has benefited from review by National Bureau directors R. A. Gordon, Marion B. Folsom, and J. Wilson Newman.

The painstaking work of processing information was started by Ester Moskowitz and finished by Marilyn McGirr. H. Irving Forman tackled the job of converting too many, too wiggly lines into a clear visual statement. James F. McRee, Jr., polished prose. For all of this skilled assistance I am thankful.

Lyle C. Fitch contributed to this book, which features how businessmen react to information, formulate expectations, and learn, by exposing me to the infinite complexities of how governments do the same thing. My husband, Edward C. Mack, is the friend who has been most intimately acquainted with the work and therefore most tried by it. His stubborn encouragement has made it possible.
Mack, Ruth (Prince) 1903—
