SEASONAL VARIATIONS
IN INDUSTRY AND
TRADE
INCOME IN THE UNITED STATES
By Wesley C. Mitchell, Willford I. King, Frederick R. Macaulay and Oswald W. Knauth
Volume I (1921) Summary 152 pp.

DISTRIBUTION OF INCOME BY STATES IN 1919 (1922)
By Oswald W. Knauth 30 pp., $1.30

BUSINESS CYCLES AND UNEMPLOYMENT (1923)
By the National Bureau Staff and 16 Collaborators 405 pp., $4.10

EMPLOYMENT, HOURS AND EARNINGS IN PROSPERITY AND DEPRESSION, UNITED STATES, 1920-22 (1923)
By Willford I. King 147 pp.

THE GROWTH OF AMERICAN TRADE UNIONS, 1880-1923 (1924)
By Leo Wolman 170 pp., $2.50

INCOME IN THE VARIOUS STATES: ITS SOURCES AND DISTRIBUTION, 1919, 1920 AND 1921 (1925)
By Maurice Leven 306 pp., $3.50

BUSINESS ANNALS (1926)
By Willard L. Thorp, with an introductory chapter, Business Cycles as Revealed by Business Annals, by Wesley C. Mitchell 380 pp., $2.50

MIGRATION AND BUSINESS CYCLES (1926)
By Harry Jerome 256 pp., $2.50

BUSINESS CYCLES: THE PROBLEM AND ITS SETTING (1927)
By Wesley C. Mitchell 489 pp., $5.00

THE BEHAVIOR OF PRICES (1927)
By Frederick C. Mills 598 pp.

MIGRATION AND BUSINESS CYCLES (1928)
By Willford I. King 78 pp., $1.00

TRENDS IN PHILANTHROPY (1928)
By Willford I. King 256 pp., $2.50

RECENT ECONOMIC CHANGES (1929)
By the National Bureau Staff and 15 Collaborators 2 vol., 950 pp., per set, $7.50

INTERNATIONAL MIGRATIONS
Volume I, Statistics (1929), compiled by Imre Ferenczi of the International Labour Office and edited by Walter F. Willcox 1,112 pp., $7.00
Volume II, Interpretations (1931) edited by Walter F. Willcox 715 pp., $5.00

THE NATIONAL INCOME AND ITS PURCHASING POWER (1930)
By Willford I. King 394 pp.

CORPORATION CONTRIBUTIONS TO ORGANIZED COMMUNITY WELFARE SERVICES (1930)
By Pierce Williams and Frederick E. Croxton 347 pp., $2.00

PLANNING AND CONTROL OF PUBLIC WORKS (1930)
By Leo Wolman 260 pp., $2.50

THE SMOOTHING OF TIME SERIES (1931)
By Frederick R. Macaulay 172 pp., $2.00

THE PURCHASE OF MEDICAL CARE THROUGH FIXED PERIODIC PAYMENT (1932)
By Pierce Williams 308 pp., $3.00

ECONOMIC TENDENCIES IN THE UNITED STATES: ASPECTS OF PRE-WAR AND POST-WAR CHANGES (1932)
By Frederick C. Mills 639 pp., $5.00

SEASONAL VARIATIONS IN INDUSTRY AND TRADE (1933)
By Simon Kuznets 455 pp., $4.00

* Out of print.
NATIONAL BUREAU
OF ECONOMIC RESEARCH, INC.

The National Bureau of Economic Research was organized in 1920 in response to a growing demand for scientific determination and impartial interpretation of facts bearing upon economic, social and industrial problems. Freedom from bias is sought by the constitution of its Board of Directors in which entire control is vested and without whose approval no report may be published. Rigid provisions guard the National Bureau from becoming a source of profit to its members, directors or officers, or from becoming an agency for propaganda.

OFFICERS

H. W. LAIDLER . . . . . . Chairman of the Board
OSWALD W. KNAUTH . . . . . . President
JOSEPH H. WILLITS . . . . . . Vice-President
GEORGE E. ROBERTS . . . . . . Treasurer

DIRECTORS AT LARGE

OSWALD W. KNAUTH ELWOOD MEAD
H. W. LAIDLER SHEPARD MORGAN
L. C. MARSHALL GEORGE SOULE
GEORGE O. MAY N. I. STONE
MATTHEW WOLL

DIRECTORS BY UNIVERSITY APPOINTMENT

EDWIN F. GAY, Harvard University
HARRY JEROME, University of Wisconsin
HARRY ALVIN MILLIS, University of Chicago
WESLEY C. MITCHELL, Columbia University
JOSEPH H. WILLITS, University of Pennsylvania

DIRECTORS APPOINTED BY OTHER ORGANIZATIONS

HUGH FRAYNE, American Federation of Labor
DAVID FRIDAY, American Economic Association
LEE GALLOWAY, American Management Association
GEORGE E. ROBERTS, American Bankers Association
M. C. RORTY, American Statistical Association
A. W. SHAW, National Publishers' Association
ROBERT B. WOLF, American Engineering Council

RESEARCH STAFF

EDWIN F. GAY WESLEY C. MITCHELL

Directors of Research

SIMON KUZNETS FREDERICK C. MILLS
FREDERICK H. MACAULAY WILLARD L. THORP
LEO WOLMAN
RELATION OF THE BOARD OF DIRECTORS

TO THE WORK OF THE

NATIONAL BUREAU OF ECONOMIC RESEARCH

1—The object of the Bureau is to ascertain and to present to the public important economic facts and the interpretation thereof in a scientific and impartial manner, free from bias and propaganda. The Board of Directors is charged with the responsibility of ensuring and guaranteeing to the public that the work of the Bureau is carried out in strict conformity with this object.

2—The Directors shall appoint one or more directors of research chosen upon considerations of integrity, ability, character, and freedom from prejudice, who shall undertake to conduct economic researches in conformity with the principles of the Bureau.

3—The director or directors of research shall submit to the members of the Board, or to its executive committee when such is constituted and to which authority has been delegated by the Board, proposals in respect to researches to be instituted; and no research shall be instituted without the approval of the Board, or of its executive committee.

4—Following approval by the Board, or its executive committee, of a research proposed, the director or directors of research shall as soon as possible submit to the members of the Board, by written communication, a statement of the principles to be pursued in the study of the problem and the methods to be employed; and the director or directors of research shall not proceed to investigate, study, and report in detail, until the plan so outlined has been approved by the Board or the executive committee thereof.

5—Before the publication of the results of any inquiry the director or directors of research shall submit to the Board a synopsis of such results, drawing attention to the main conclusions reached, the major problems encountered, and the solutions adopted, the nature of the sources from which the basic facts have been derived, and such other information as in their opinion shall have a material bearing on the validity of the conclusions and their suitability for publication in accordance with the principles of the Bureau.

6—A copy of any manuscript proposed to be published shall also be submitted to each member of the Board, and every member shall be entitled, if publication be approved, to have published also a memorandum of any dissent or reservation he may express, together with a brief statement of his reasons therefor, should he so desire. The publication of a volume does not, however, imply that each member of the Board of Directors has read the manuscript and passed upon its validity in every detail.

7—The results of any inquiry shall not be published except with the approval of at least a majority of the entire Board and a two-thirds majority of all those members of the Board who shall have voted on the proposal within the time fixed for the receipt of votes on the publication proposed; such limit shall be 45 days from the date of the submission of the synopsis and manuscript of the proposed publication, except that the Board may extend the limit in its absolute discretion, and shall upon the request of any member extend the limit for a period not exceeding 30 days.

8—A copy of this memorandum shall, unless otherwise determined by the Board, be printed in each copy of every work published by the Bureau.

Resolution Adopted October 25, 1926.
FOREWORD

In the course of the nineteenth century, analysis of statistical records led to the discovery that the bewildering variety of changes in economic activities belong to at least four distinct species. Cournot pointed out that secular movements, long recognized in astronomy, have their analogues in economics. Juglar gave precision and content to the conception of cyclical fluctuations that earlier writers had suggested. Jevons developed, though he did not originate, the notion of seasonal variations, seeking to demonstrate their regularity and to measure their amplitudes. Meanwhile the idea that 'disturbing circumstances' of great variety are continually interfering with the 'normal' course of events had become a commonplace in economic theory.

As the multiplication of statistical data and the improvement of statistical technique encouraged economists to attempt bolder quantitative work, they found these concepts useful tools. Most of the time series with which they dealt could be treated as synthetic products of the four recognized types of concurrent changes. While secular trends are creeping up or down, cyclical waves wash above or below the secular levels of the day; seasonal variations diversify the secular-cyclical patterns, and random factors add their unpredictable complications to the secular-cyclical-seasonal complex.

Like most conceptual tools, the four classes of economic changes tended to become independent entities in men's minds, each calling for scientific study. Cyclical fluctuations attracted most attention. Indeed, most of the attempts to measure secular trends and seasonal variations have been made by men who wished merely to eliminate these movements in order to get a clearer view of 'cycles'. Only sporadically have investigators treated secular or seasonal changes as problems possessing interest in their own right. The literature upon these topics is scanty in comparison with the voluminous publications upon business cycles. To random perturbations scarcely any attention has been given except as the most troublesome of all side-issues in cyclical studies.
FOREWORD

The time is ripe for more systematic and more thorough work. To promote that understanding of economic fluctuations which the world so sorely needs, the intensive study of business cycles must be supplemented by equally intensive work upon secular trends and seasonal variations. That much seems clear. It is not sure that systematic study of random perturbations will yield valuable results; but the prospects are good enough to justify experiments. Efforts should be made also to determine whether other types of change, in addition to the four familiar types, must be recognized. Only by learning all we can about the several components of economic changes shall we learn all we can about the total situation. But concentration upon one type of change should always include consideration of the way in which the type under scrutiny is related to the others.

For several years the National Bureau of Economic Research has been working upon business cycles. One of its research associates has been studying secular movements. An extension of this program to seasonal variations was a natural development, since the cyclical work required measurements of the seasonal components in some hundreds of statistical series.

Dr. Kuznets was peculiarly fitted by his earlier investigations to direct the seasonal studies. His first book, *Cyclical Fluctuations, Retail and Wholesale Trade*, published in 1926, and the leading part which he had taken in the National Bureau's business-cycle program gave him intimate familiarity with the cyclical component in economic changes. His second book, *Secular Movements in Production and Prices*, published in 1930, made him familiar with another component. With seasonal variations themselves he had an intimate acquaintance gained in the process of eliminating them from some hundreds of time series.

In preparing the present report Dr. Kuznets has supplemented the seasonal by-products of the cyclical work by making many additional measurements. The result is a systematic account, unrivalled in scope and vividness, of the rôle played by seasonal variations in production and prices. The way in which these changes dovetail into one another, the way in which they affect and are affected by changes in industrial equipment and in stocks of commodities; the alterations to
which seasonal variations are subject from year to year and over longer periods, and the relations of seasonal to cyclical and secular movements are all set forth. I am sure that economists and statisticians will find the work enlightening; I think that business men will find it of practical value.

Wesley C. Mitchell

National Bureau of Economic Research

ACKNOWLEDGMENTS

This book is the product of more than one man's work and application. Its basic data could not have been assembled and analyzed without the resources of the National Bureau of Economic Research. And the task of organization and interpretation was greatly facilitated by the participation of many individuals to whom I wish to express appreciation.

The manuscript was read by the Directors and research staff of the National Bureau. Especially valuable comments were made by Professor Edwin F. Gay, Colonel Malcolm C. Rorty and Professor Harry Jerome. Of the Research Associates, Dr. A. G. Silverman, and particularly Mr. Arthur F. Burns, have made far-reaching suggestions, most of which have been adopted.

Throughout the progress of the study, I have been greatly helped by Mr. Denis Volkenau and Mr. H. Irving Forman. Mr. Volkenau has had a large share in the task of computation and has also contributed various criticisms. Mr. Forman, besides assisting also in the computations, is responsible for the charts. Miss Cicely Applebaum made numerous suggestions towards the revision of the manuscript and has prepared the index. The editing of the manuscript has been carried through by Miss Martha Anderson.

Of those outside the National Bureau, I am indebted most to Miss Aryness Joy of the Research Division of the Federal Reserve Board. Miss Joy not only read the manuscript and gave valuable advice, but also made available the results of the Federal Reserve Board's extensive studies of seasonal variations. Mr. A. W. Zelomek of the Fairchild Publications has been helpful in connection with Chapter IV, and Dr. E. H. Hempel of General Motors Export, in connection with Chapter V.

To all these who have assisted me, sincere thanks are given.

XXIX. Foreign Trade of the United States, by Commodity Groups
   Amplitude of Seasonal Variations in Each Group .......................... 264

XXX. Sales by Wholesalers, Nine Lines of Wholesale Trade
   Amplitude of Seasonal Variations in Each Line ................................ 268

XXXI. Sales in Nine Lines of Retail Trade
   Amplitude of Seasonal Variations in Each Line ................................ 270

XXXII. Department Store Sales, New England, By Separate Departments
   Timing and Amplitude of Seasonal Variations in Each Department .......... 272

XXXIII. Indexes of Similarity between Average Seasonal Indexes for Successive Periods
   Series Relating to the Flow of Commodities .................................. 284

XXXIV. Indexes of Similarity between Moving Seasonal Indexes for Selected Years
   Industrial Production ......................................................... 292

XXXV. Indexes of Similarity between Seasonal Indexes for Selected Years
   Employment in Manufacturing Industries .................................... 294

XXXVI. Correlation Year by Year between Average Seasonal Indexes and the Percentage Deviations of the Original Data from the Moving Average
   Production, Receipts and Consumption ...................................... 296

XXXVII. Comparison of Ranks by Seasonal Amplitude and by Stability of Pattern
   Production, Receipts and Consumption (ranks in increasing order for both variables) ... 300

XXXVIII. Correlation Year by Year between Average Seasonal Indexes and the Percentage Deviations of the Original Data from the Moving Average
   Payrolls in Selected Manufacturing Industries ............................... 301
XXXIX. Grouping of Series by Rise and Decline in Seasonal Amplitude from the War or Early Post-War Period to the Most Recent Period ........................................... 306

XL. Grouping of Series by Decline in Seasonal Amplitude and by Rise in Absolute Volume. 308

XLI. Measures of Seasonal Amplitude for Two Successive Post-War Periods
Selected Series on Industrial Production.... 310

XLII. Measures of Seasonal Amplitude for Two Successive Post-War Periods
Selected Series on Industrial Employment... 311

XLIII. Seasonal Amplitude Ratios by Years
Selected Series on Wheat and Flour......... 325

XLIV. Seasonal Amplitude Ratios by Years
Selected Series on Livestock and Meat...... 328

XLV. Comparison of Changes in the Absolute Volume of the Series With the Standing of and Changes in Amplitude Ratios
Selected Series on Livestock and Meat...... 333

XLVI. Seasonal Amplitude Ratios by Years
Selected Series on Industrial Production.... 334

XLVII. Comparison of Changes in the Absolute Volume of the Series with the Standing of and Changes in Amplitude Ratios
Selected Series on Industrial Production.... 337

XLVIII. Seasonal Amplitude Ratios by Years
Selected Series on Payrolls in Manufacturing Industries ................................. 341

XLIX. Seasonal Surplus of Commodity Stocks in Units of Monthly Volume of Production, Shipments or Apparent Consumption..... 346

L. Per Cent Actual Output of Maximum Possible Output Manufacturing Industries Characterized by Seasonal Variations.
 Deviations from Average for All Industries.. 350

LI. Measures of Seasonal Excess Labor Supply.. 354
