Relation of the Directors to the Work and Publications of the National Bureau of Economic Research

1. The object of the National Bureau of Economic Research is to ascertain and to present to the public important economic facts and their interpretation in a scientific and impartial manner. The Board of Directors is charged with the responsibility of ensuring that the work of the National Bureau is carried on in strict conformity with this object.

2. To this end the Board of Directors shall appoint one or more Directors of Research.

3. The Director or Directors of Research shall submit to the members of the Board, or to its Executive Committee, for their formal adoption, all specific proposals concerning researches to be instituted.

4. No report shall be published until the Director or Directors of Research shall have submitted to the Board a summary drawing attention to the character of the data and their utilization in the report, the nature and treatment of the problems involved, the main conclusions and such other information as in their opinion would serve to determine the suitability of the report for publication in accordance with the principles of the National Bureau.

5. A copy of any manuscript proposed for publication shall also be submitted to each member of the Board. For each manuscript to be so submitted a special committee shall be appointed by the President, or at his designation by the Executive Director, consisting of three Directors selected as nearly as may be one from each general division of the Board. The names of the special manuscript committee shall be stated to each Director when the summary and report described in paragraph (4) are sent to him. It shall be the duty of each member of the committee to read the manuscript. If each member of the special committee signifies his approval within thirty days, the manuscript may be published. If each member of the special committee has not signified his approval within thirty days of the transmittal of the report and manuscript, the Director of Research shall then notify each member of the Board, requesting approval or disapproval of publication, and thirty additional days shall be granted for this purpose. The manuscript shall then not be published unless at least a majority of the entire Board and a two-thirds majority of those members of the Board who shall have voted on the proposal within the time fixed for the receipt of votes on the publication proposed shall have approved.

6. No manuscript may be published, though approved by each member of the special committee, until forty-five days have elapsed from the transmittal of the summary and report. The interval is allowed for the receipt of any memorandum of dissent or reservation, together with a brief statement of his reasons, that any member may wish to express; and such memorandum of dissent or reservation shall be published with the manuscript if he so desires. Publication does not, however, imply that each member of the Board has read the manuscript, or that either members of the Board in general, or of the special committee, have passed upon its validity in every detail.

7. A copy of this resolution shall, unless otherwise determined by the Board, be printed in each copy of every National Bureau book.

(Resolution adopted October 25, 1926, and revised February 6, 1933, and February 24, 1941)
Committee on Research in Finance

In the planning and conduct of its studies in finance the National Bureau benefits from the advice and guidance of its Committee on Research in Finance. The members of the Committee are:

RALPH A. YOUNG, Chairman—Director, Division of Research and Statistics, Board of Governors of the Federal Reserve System

RAYMOND J. SAULNIER, Secretary—Barnard College, Columbia University; Director, Financial Research Program, National Bureau of Economic Research

BENJAMIN HAGGOTT BECKHART—Columbia University; Economic Consultant, The Chase National Bank

ARTHUR F. BURNS—Columbia University; Director of Research, National Bureau of Economic Research

WILLIAM J. CARSON—University of Pennsylvania; Executive Director, National Bureau of Economic Research

GEORGE W. COLEMAN—Economist, Mississippi Valley Trust Company

EDISON H. CRAMER—Chief, Division of Research and Statistics, Federal Deposit Insurance Corporation

ERNEST M. FISHER—Columbia University

E. A. GOLDENWEISER—Institute for Advanced Study

F. CYRIL JAMES—Principal and Vice-Chancellor, McGill University

WALTER LICHTENSTEIN

WALTER MITCHELL, Jr.—Managing Director, Controllers Institute of America

WILLIAM I. MYERS—Dean, College of Agriculture, Cornell University

JAMES J. O'LEARY—Director of Investment Research, Life Insurance Association of America

GEORGE BASSETT ROBERTS—Vice-President, The National City Bank; Treasurer, National Bureau of Economic Research

HAROLD V. ROELSE—Vice-President, Federal Reserve Bank of New York

CASIMIR A. SIENKIEWICZ—President, Central-Penn National Bank of Philadelphia

WOOLFIE THOMAS—Economic Adviser, Board of Governors of the Federal Reserve System

DONALD S. THOMPSON—Vice-President, Federal Reserve Bank of Cleveland

JOHN H. WILLIAMS—Graduate School of Public Administration, Harvard University; Economic Adviser, Federal Reserve Bank of New York

JOHN H. WILLS—Second Vice-President, Northern Trust Company

LEO WOLMAN—Columbia University; Research Staff, National Bureau of Economic Research

DONALD B. WOODWARD—Second Vice-President, Mutual Life Insurance Company of New York
Preface

This study is the third to be published of the separate monographs prepared under the Urban Real Estate Finance Project, the broad objective of which, in the language of the National Bureau's Exploratory Committee on Research in Urban Real Estate Finance, is "to develop an organized body of knowledge concerning mortgage lending practices, costs, losses, yields, and risks as a basis for constructive policy making."

Following the Exploratory Committee's recommendation, the Project was divided into six main parts and while each of the separate investigations was designed as an integral part of a rounded study, the exigencies of research have meant, as one would expect, that the order of completion has varied from the order of the original plan. The study by Miles L. Colean on "The Impact of Government on Real Estate Finance in the United States," which constitutes Part V of the Project, was published in October 1950; my study of "Urban Mortgage Lending by Life Insurance Companies," which is one of the four studies of specific types of lending institutions planned under Part II of the Project, was published in July 1950. Professor Fisher's study, "Urban Real Estate Markets: Characteristics and Financing," represents the completion of our objectives under Part I of the Project, the principal objective of which was to describe the characteristics of real estate as they influence financing needs and experience.

Two additional studies, Carl F. Behrens' "Commercial Bank Activities in Urban Mortgage Financing" and C. Lowell Harriss' "History and Policies of the Home Owners Loan Corporation," will be published shortly. Studies under the remaining sections of the
Project are in process, although with some modification of original plans; all are expected to be completed during this year and early 1952.

Professor Fisher has seen his problem as that of describing not the real estate market but a whole series of related markets in which the different main types of real estate, and the services thereof, are bought, sold, and exchanged. The necessity of attacking the problem in this manner was far from perfectly foreseen at the outset. It was soon discovered, however, that this approach was the only one by which one could describe the complex pattern of relationships that comprise what is ordinarily referred to as the real estate market.

Specific acknowledgment has been made by the author of the assistance that he received in connection with the execution of his task from individuals, private financial institutions, and public bodies. I should like to add, on behalf of the National Bureau of Economic Research, an additional expression of thanks to all those who, through making materials available or by consulting with the author on technical points of analysis and interpretation, have contributed to the investigation. Also, the National Bureau of Economic Research gratefully acknowledges the generous grants of funds from the Rockefeller Foundation, the Association of Reserve City Bankers and the Life Insurance Investment Research Committee, acting for the American Life Convention and the Life Insurance Association of America, which have made possible this and other studies in the Urban Real Estate Finance Project.

R. J. Saulnier
Director, Financial Research Program
Author's Acknowledgments

When Ralph A. Young, who was then in charge of the National Bureau's Financial Research Program, invited me to participate in the Urban Real Estate Finance Project by preparing this study of the real estate market, the invitation was accepted with alacrity. There seemed to be a real and pressing need for such a study and the assignment was a challenging one, offering as it did the opportunity to contribute to a better understanding of the forces underlying transactions of significance to every adult in the country, to a large group of financial institutions, and to the livelihood of a not inconsiderable portion of our citizenry. What is more, it appeared at that early stage to be a relatively easy undertaking.

In its execution, however, the task has been a formidable one. The data necessary to develop a reasonably complete description of the real estate market are scattered and fragmentary; until an effort was made to establish a systematic framework for this description, and to fill in the important connecting members in that framework, the number and magnitude of the gaps in our information, and the inadequacy of our understanding of real estate market processes, were not apparent. Unfortunately, many of these gaps and much of this inadequacy remain. In many instances, it has been necessary merely to indicate these gaps and to attempt to span them by constructing hypothetical connecting strands of thought. It is hoped that these tentative strands will not prove wholly misleading, that they will not have been projected in a totally wrong direction, and that the territory over which they have been cast will in time be explored more thoroughly by other investigators. If the present work stimulates further research in the nature and operations of the real estate market, it will have accomplished one of the author's principal objectives.

There are many individuals, in both academic and business pursuits, to whom the author is indebted for whatever understanding
of real estate markets may be manifested in this work, but to acknowledge all of these would be to set down a list too long for inclusion in this brief note. Special acknowledgment should be made, however, of those who rendered immediate help in this specific project, particularly Ralph A. Young and Donald S. Thompson who initiated the Urban Real Estate Finance Project and directed it in its early stages and R. J. Saulnier, who has been in charge of the project during the major portion of the time during which this study was executed. Dr. Saulnier's personal encouragement has been helpful throughout the work and his technical assistance in various phases has saved me many embarrassments. Harold L. Reeve, First Vice President, Chicago Title and Trust Company, has followed a long-time tradition of making penetrating suggestions, particularly in Chapters 1 and 2.

To Chester Rapkin, who has worked with me through almost the entire period of the study's development, I give my sincere thanks for the able execution of many detailed research assignments, for the preparation and checking of tables, and for the preparation of first drafts of a number of sections of the text.

For the Appendix data on deeds and mortgages recorded in nine principal areas, and for several other special tabulations indicated in the text, I am indebted to the Federal Housing Administration and principally to Mrs. Shirley K. Hart, formerly Director of the Division of Research and Statistics. Also, I am indebted to Mr. L. Durward Badgley and Mr. Howard G. Brunsman, formerly members of my staff in the Division of Economics and Statistics, Federal Housing Administration, who made extensive analyses of the deeds and mortgage data referred to in the Appendix. I wish to record here my gratitude to them for the privilege of using the results of their work, and for the understanding they gave me of many of the problems involved in working with these materials.

To Gwladys M. Davies, my secretary, I am indebted for her patience and assistance in maintaining order in the materials and drafts of the manuscript as they have multiplied in the course of the project.

Obviously, for any errors in interpretation or any other imperfections which this work may manifest, no one but the author can bear responsibility.

Ernest M. Fisher
