Chapter pages in book: (p. 157 - 188)

APPENDIX B

BILATERAL COMPARISONS OF VALUE ADDED PER EMPLOYEE

Tables B-1, B-2, and B-3 give the variables plotted in Charts 11, 12, and 13, respectively. The United States data are derived from the *1958 Census of Manufactures* (used in the comparison with the United Kingdom), the *1962 Annual Survey of Manufactures* (used in the comparison with Japan), and the *1963 Census of Manufactures* (used in the comparison with India), all of which are publications of the Bureau of the Census, U.S. Department of Commerce. The sources of the data for the other three countries are as follows: United Kingdom: *Reports on the Census of Production, 1958*, London, Board of Trade, 1962; Japan: *Census of Manufactures, 1962*, Ministry of International Trade and Industry, Research and Statistics Division, Tokyo, 1964; India: *Annual Survey of Industries, 1961*, Central Statistical Organization, Calcutta, 1965.

To make these bilateral comparisons, it has been necessary to establish a conversion between the industrial classification used by the United States and that used in each of the other three countries. The conversions developed for this purpose are indicated in Tables B-1, B-2, and B-3.

The British classification, a very summary one of only 109 items (at the three-digit and four-digit levels, free of duplication), has been maintained almost intact, only a few combinations of items from the British schedule being necessary in the interest of comparability. This yields 103 items for comparison with the United States.

The Japanese classification is far more detailed, comprising 501 items at the four-digit level. In many cases, however, it has seemed preferable to establish the conversion at the three-digit level for Japan, and in other cases it has been deemed necessary to combine two or more four-digit items and, more exceptionally, some three-digit ones.

In addition, the following numbers from the Japanese classification have been omitted altogether because of inability to identify a corresponding item in the United States classification: 1841, 1845, 1891, 1892, 1893, 1895, 1896, 1897, 1898, 1899, 201, 2025, 2026, 2027, 2034, 2039, 2092, 2093, 2094, 2097, 2099, 2141, 215, 2191, 2192, 2199, 2241, 2321, 2425, 2426, 2427, 2439, 244, 249, 251, 2521, 2692, 2699, 2731, 2741, 2759, 2762, 2763, 2769, 3031, 3044, 3121, 3122, 3123, 319, 3212, 3215, 3216, 3217, 3219, 329, 3482, 3491, 3631, 3641, 3653, 3659, 369, 3811, 3971, 3981, 3982, 3983, 3984, 3986, 3987, 3988, 3989, 399. The net effect of these combinations and deletions has been to provide 178 items for which there seemed to be a reasonably close correspondence between the Japanese and the U.S. industries.

The Indian classification, comprising 194 items (some three-digit and others four- or five-digit), has also been subjected to some combinations in the search for comparability with the United States. More important, a considerable number of items have had to be deleted altogether. One reason, as in the case of Japan, has been the lack of reasonably similar items identifiable in the statistics for the United States, the Indian code numbers so deleted being as follows:¹ 2072, (2091, 20910), 2094, 2095, 2097, 2201, (2204, 2205), 2206, 2312, 2391, 2394, (2397, 2399), 2591, 2592, (3119, 31110), 31122, 3121, 3191, (3193, 3194), 31912, 3199, 329, 3333, 3397, 3398, 3505, (3508, 35014), 3509, 35013, (3609, 36010), 36042, 36045, (36047, 360410), 360412, 360413, 36051, (36054, 36056, 36062), 360514, (37015, 3704), 39915, (395, 3998, 39913, 39917).

A second reason for deletion of items from the Indian schedule is that, according to the details contained in the source, some industries are engaged mainly or largely in repair or service work as distinguished from manufacturing proper. The code numbers omitted for this reason are as follows: 2096, 2098, 2392, 2393, 3506, 36013, 36046, 3811, 3821, 3822, 3823, 384, 386, 3942, 39914. Finally, two items have been deleted from the Indian schedule because (according to details published for individual Indian states) the industries concerned employ sizable numbers of unpaid prison labor at nominal wages, the items deleted for this reason being Nos. 2092 and 2601.

The net effect of the combinations and deletions noted above is to give 117 items from the Indian side for comparison with the United States. As reported in Chapter 3, additional computations have been

¹ Indian numbers here grouped in parentheses are combined in the source.

made, excluding (1) Indian industries with total employment of less than 1,000 each and (2) others with total employment of less than 2,000 each. The items in question are as follows:

(1) 204, 208, 213, 214, 293, 3118, 31910, 3507, 36049, 360411, 360513, 37019, 3812, 393, 3995, 39910, (39911, 39912).

(2) 203, 2318, 232, (2395, 2396), 2398, 241, 3192, 3396, 3412, 35012, (360111, 360112), 36012, 360512, 36052, 36061, 3924, 3941.

A test of linearity and Bartlett's test for homoscedasticity were applied to the data in an effort to determine whether the arithmetic or logarithmic form of correlation was appropriate. The results of these tests are given in Table B-4. For both the United States-Japan and the United States-India comparisons the linearity test showed that the variables were not linearly related in the arithmetic form but were so related in the logarithmic form; the results were significant at the 1 per cent level of confidence. However, for both functional forms, Bartlett's test showed that the variances of the observations (the data were arranged in ascending order of the independent variable and divided into groups of approximately twenty observations) were not homogeneous for the complete sets of industries; the results were significant at the 1 per cent level of confidence. For the more limited number of observations, as specified in each case in Table 6, the variances were homogeneous in the logarithmic form but not in the arithmetic form. In brief, on statistical grounds alone, the logarithmic form seems more appropriate than the arithmetic form for both the U.S.-Japan and U.S.-India correlations, as shown in the accompanying table.

For the U.S.-U.K. comparison, the variables are shown to be linearly related in both the arithmetic and logarithmic forms, according to the linearity test. Bartlett's test shows, however, that the variances of the observations (the data were arranged in ascending order of the independent variable and divided into four groups) were homogeneous in the logarithmic form but not in the arithmetic form. That is, only the logarithmic form passes both of these tests. On the basis of these tests, all of the bilateral comparisons were computed with the variables transformed into logarithms.

The regression equations obtained from the bilateral comparisons and used in deriving the middle column of figures in each of Tables B-1, B-2, and B-3 are given below, X being in each case the log of value added by manufacture per employee in the United States and Y the log of value added by manufacture per employee in the foreign country concerned:

United States—United Kingdom (103 industries)

$$Y = -.317 + .795X$$

United States—Japan (178 industries)

$$Y = -.608 + .966X$$

United States—India (117 industries)

$$Y = -1.053 + .917X$$

TABLE B-4

*Linearity and Bartlett Tests for Bilateral Comparisons
of Value Added per Employee*

Test	Number of Industries	Arithmetic Form	Logarithmic Form
Linearity			
U.S.-U.K.	103	1.16 (8,93)	.08 (8,93)
U.S.-Japan	178	3.67* (5,171)	1.10 (8,168)
U.S.-India	117	5.21* (9,106)	1.85 (18,97)
Bartlett			
U.S.-U.K.	103	67.18** (4)	12.54 (4)
U.S.-Japan	178	143.88** (7)	25.57** (7)
	169	56.06** (5)	9.28 (5)
U.S.-India	117	169.38** (5)	26.29** (5)
	76	29.75** (3)	.85 (3)

Note: See Table A-4 for sources of tests used. Numbers in parentheses indicate degrees of freedom for each statistic.

*Variables not linearly related at 1 per cent level of confidence.

**Variances significantly different from one another at 1 per cent level of confidence.
