MECHANIZATION
IN INDUSTRY
The National Bureau of Economic Research was organized in 1920 in response to a growing demand for scientific determination and impartial interpretation of facts bearing upon economic and social problems. Freedom from bias is sought by the constitution of its Board of Directors without whose approval no report may be published. Rigid provisions guard the National Bureau from becoming a source of profit to its members, directors or officers, or from becoming an agency for propaganda.

Officers

OSWALD W. KNAUTH, Chairman
JOSEPH H. WILLITS, President
CHARLES A. BLISS, Executive Secretary

GEORGE SOULE, Vice-President
SHEPARD MORGAN, Treasurer

Research Staff

WESLEY C. MITCHELL, Director of Research
ARTHUR F. BURNS
SIMON KUZNETS
FREDERICK R. MACAULAY
FREDERICK C. MILLS
LEO WOLMAN
EUGEN ALTSCHUL, Associate

Directors at Large

OSWALD W. KNAUTH
H. W. LAIDLER
L. C. MARSHALL
GEORGE O. MAY
ELWOOD MEAD
SHEPARD MORGAN
GEORGE SOULE
N. L. STONE

Directors by University Appointment

EDWIN F. GAY, Harvard
WALTON H. HAMILTON, Yale
HARRY JEROME, Wisconsin
HARRY ALVIN MILLIS, Chicago
WESLEY C. MITCHELL, Columbia
JOSEPH H. WILLITS, Pennsylvania

Directors appointed by other Organizations

DAVID FRIDAY
American Economic Association
Lee Galloway
American Management Association
George E. Roberts
American Bankers Association
M. C. RORTY
American Statistical Association
ARCH W. SHAW
National Publishers Association
ROBERT B. WOLF
American Engineering Council
RELATION OF THE DIRECTORS

TO THE WORK OF THE NATIONAL BUREAU

OF ECONOMIC RESEARCH

1. The object of the National Bureau of Economic Research is to ascertain and to present to the public important economic facts and their interpretation in a scientific and impartial manner. The Board of Directors is charged with the responsibility of ensuring that the work of the Bureau is carried on in strict conformity with this object.

2. To this end the Board of Directors shall appoint one or more Directors of Research.

3. The Director or Directors of Research shall submit to the members of the Board, or to its Executive Committee, for their formal adoption, all specific proposals concerning researches to be instituted.

4. No study shall be published until the Director or Directors of Research shall have submitted to the Board a summary report drawing attention to the character of the data and their utilization in the study, the nature and treatment of the problems involved, the main conclusions and such other information as in their opinion will serve to determine the suitability of the study for publication in accordance with the principles of the Bureau.

5. A copy of any manuscript proposed for publication shall also be submitted to each member of the Board. If publication is approved each member is entitled to have published also a memorandum of any dissent or reservation he may express, together with a brief statement of his reasons. The publication of a volume does not, however, imply that each member of the Board of Directors has read the manuscript and passed upon its validity in every detail.

6. The results of an inquiry shall not be published except with the approval of at least a majority of the entire Board and a two-thirds majority of all those members of the Board who shall have voted on the proposal within the time fixed for the receipt of votes on the publication proposed. The limit shall be forty-five days from the date of the submission of the synopsis and manuscript of the proposed publication unless the Board extends the limit; upon the request of any member the limit may be extended for not more than thirty days.

7. A copy of this resolution shall, unless otherwise determined by the Board, be printed in each copy of every Bureau publication.

(Resolution of October 25, 1926, revised February 6, 1933)
MECHANIZATION IN INDUSTRY

HARRY JEROME

NATIONAL BUREAU OF ECONOMIC RESEARCH

NEW YORK - 1934
ACKNOWLEDGMENTS

Among the many organizations and individuals who have contributed to the preparation of this report, I am indebted first to the Social Science Research Council, for its generosity in giving financial aid; to the National Bureau of Economic Research, under whose auspices the survey was conducted; and to the University of Wisconsin, for grant of leave of absence during a portion of the time it was in progress.

In connection with the assembling of that part of the data that was obtained by inspections, interviews and correspondence, much time and information was generously given by several thousand persons engaged in manufacturing and other industrial operations. Although I cannot list the names of those who so cooperated, I wish to express to them my sincere appreciation of their courteous and helpful assistance.

Many persons have served as co-workers in the collection and analysis of material. The major part of the inspections and preliminary drafts of the analysis by industries were made by Mr. Glion T. Benson for several industries, including among others, stevedoring, the brick industry and the New England cotton mills; Mr. W. Richmond Smith, foundries; Dr. Meredith B. Givens, iron and steel; and Mr. R. R. Worsencroft, highways. Inspections were made also by Mr. H. F. Girvin and Professors George W. Barnwell and Russell W. Henninger and by several other investigators who rendered useful service for shorter periods. In preparing reports on the several industries from the schedules and published material assistance was rendered by Professor Russell Bauder, foundries; Dr. Alfred W. Briggs, glass;
ACKNOWLEDGMENTS

Mr. Kenneth H. Parsons, agriculture; and Dr. Miriam E. West, cotton goods. Miss Edith H. Handler conducted some of the paper mill inspections and drafted a report for that industry, and also gave valued assistance in the analysis of material and in the preliminary preparation of many other parts of the manuscript. Among others who aided in the analysis of data and preparation of the manuscript, I must mention particularly Mrs. Edith H. Pearson, Misses Alice B. Cronin, Elizabeth B. Kehler, Marvel Keller and Kathryn Robertson, and Messrs. F. P. Hall, D. W. Hembel, George Mitchell, H. K. Snell, Charles F. Weiler, R. B. Whiting and T. E. Whiting.

I have tried in the text to acknowledge the important contributions which various co-workers have made to the analysis of particular industries, and also the aid received from published material dealing with technological change, notably the several studies of productivity made by Dr. Boris Stern for the Bureau of Labor Statistics, which have proved especially helpful.

In the early stages of the manuscript numerous persons generously read and criticized chapters devoted to the particular industries, including: D. M. Avey, Editor, The Foundry; R. E. Kennedy, Technical Secretary, American Foundrymen's Association; J. M. Taylor, Secretary, National Founders Association; W. L. Monro, President and General Manager, American Window Glass Company; W. P. Clarke, President, American Flint Glass Workers' Union of North America; Harry Jenkins, Secretary, Glass Bottle Blowers Association; Professor William Haber; J. L. Harrison, Bureau of Public Roads, United States Department of Agriculture; and R. E. McCausland, Field Manager, Barber-Colman Company. Although we have not found it practicable to publish the reports on the several industries in as full a form as they were when examined by these gentlemen, their criticisms and suggestions have been helpful in preparing the more abbreviated statements finally incorporated. For these statements, they are, of course, in no way responsible.

I am deeply indebted to Dr. Edwin F. Gay and Dr. Wesley C. Mitchell, Directors of Research, for counsel and constructive
ACKNOWLEDGMENTS

criticism throughout the conduct of this survey; to Professor Frederick C. Mills for preparation of the Introduction; and to other members of the staff of the National Bureau of Economic Research who have read portions of the manuscript and made helpful criticisms. Miss Martha Anderson rendered valuable service in editing the manuscript, a task made substantially more difficult by the fact that the manuscript was first prepared with separate chapters devoted to each of the several industries selected for special attention and then reduced to its present compass. The charts were made by Miss Dorothy Achilles. Valued help has been given by my wife in correcting and proofreading the manuscript at various stages.

Helpful suggestions were received from a number of the Directors of the National Bureau of Economic Research, particularly Mr. George O. May, Colonel Malcolm C. Rotty and Professor Joseph H. Willits. Professor John R. Commons, a director of the National Bureau when this study was inaugurated, gave helpful encouragement and counsel to the writer and various co-workers.

To all those who have contributed to the information upon which this study is based and to the many co-workers and others by whose suggestions I have sought to profit, I am sincerely grateful.

HARRY JEROME

## INTRODUCTION BY FREDERICK C. MILLS

### I SUMMARY
- Origin and Scope of Survey
- Methods and Materials
  - Bases of Selection of Industries
  - Information Sought in Factory Inspections
  - Supplementary Sources of Information
- Summary of Findings
- Limitations of Findings

### II TYPES OF LABOR-SAVING CHANGES
- Productivity-increasing versus Labor-displacing Changes
  - Bases for Computation of Changes in Productivity
    - Labor Basis
    - Time Basis
  - Bases for Computation of Labor Displacement
- Labor-saving Ratio
- Non-mechanical Changes
- Mechanical Changes
  - Meaning of 'Mechanization'
  - Types of Labor-saving Mechanical Changes
    - Elimination of Operations
    - Imitation of Hand Procedure
    - Mechanization by Conversion
    - New Construction
CONTENTS

Methods or Equipment Displaced 45
   Displacement of Hand Methods 46
   Displacement of Mechanical Equipment 47
Indirect Savings of Labor 48
Classification of Machines 49
   Operation in which used 49
   Degree to which automatic 50
   Type of Power 50
   Agency by which produced 51
Summary 54

III CHANGES IN MECHANIZATION IN SELECTED MANUFACTURING INDUSTRIES 55
 Sources of Information 55
    Labor-saving Changes in Establishments Surveyed 56
    Annual Sales of Labor-saving Equipment 56
Summary of Important Changes in Mechanization 58
 Iron and Steel (Blast Furnaces and Steel Works) 58
 Ferrous Foundries 66
 The Manufacture of Brick 71
    Equipment Changes in Plants Inspected 73
    Decline in Number of Establishments 76
 Pottery 77
    Changes in Equipment and Processes 77
 Portland Cement 80
 Cotton Yarn and Cloth 80
    The Automatic Loom 82
    Reorganization of Work 83
    Tying-in and Drawing-in Machines 84
    Automatic Spooler and High Speed Warper 86
 Garment Industries 87
 Pulp and Paper 88
    Increasing Size of Equipment Units 89
    Reported Labor-saving Changes 90
 Commercial Printing 93
 Newspaper Printing 94
 The Glass Industry 96
CONTENTS

Window Glass 97
Cylinder Machine 98
Sheet Process 98
Decline of the Hand Branch 99
Plate Glass 102
Glass Containers 103
Extent of Introduction of Automatic Machinery 106

CONTENTS

Other Measures of Changing Mechanization
  Ratio of Wages to Value added by Manufacture 226
  Proportion produced by Machine Methods 229
  Proportion of Users equipped with Specified Device 230
  Proportion of New Equipment that is Power-Driven 230
  Number of Machines in Use 231
Growth of the Machine-Producing Industries 232
Measurable Tendencies contributing to the Progress of Mechanization
  Changes indirectly affecting the Degree of Mechanization 236
Elimination of Inefficient Plants and Regional Shifts to High-productivity Areas 237
Decline in Number of Manufacturing Establishments 239
Size of Establishments 243
Increasing Capacity of Machine Units 244
  Rotary Cement Kilns 246
  Power Units in Factories 247
Increasing Capacity through greater Speeds 248
Electrification of Factory Power Equipment 250
Economy of Men and Equipment 253

VII DIFFERENCES IN DEGREE OF MECHANIZATION 255
Horsepower per Wage Earner 256
  By Industries 256
  Geographical Differences 259
  Wage Levels and Mechanization 262
  Size and Mechanization 263
Ratio of Wages paid to Value added by Manufacture 267
Investment in Buildings and Equipment 271
Relative Number of Hand and Machine Workers 271
  Proportion of Hand Workers, by Processes 276
Proportion of Work done by Machine 280
Estimates of Extent of Use of selected Machines or Processes 283
Summary 287

VIII CHARACTERISTICS OF THE MACHINE-PRODUCING INDUSTRIES 288
CONTENTS

Essential Features of a Machine-producing Plant 289
The Volume of Employment in the Production of Machines 289
Wage Earners in the Machinery Industries 290
Wage Earners engaged in the Production of Machines 291
Volume of Employment relative to all Manufacturing 293
Grade of Labor in the Production of Machinery 294
Distribution of the Cost involved in the Production of Machines 297
Characteristics of the Demand for Machines 300
  Machine-Tool Industry 302
  Inelasticity of Demand for Machines 304
Marketing Methods 304
Typical Stages in the Life History of a Machine Type 306
Analysis of twenty-three Machine Series 306
  Summary of Typical Stages 315
  Continuous Technical Development 319
  Machines in the Several Stages 320
Summary 324

IX FACTORS DETERMINING THE RAPIDITY OF MECHANIZATION 326
Technological Factors limiting Mechanization 328
  Limited Selective Ability 329
  Temporary and Local Technological Limitations 330
Pecuniary Factors 331
  Overhead Expense 332
  Reluctance to Scrap Existing Equipment 333
  Ease of Financing new Equipment 334
  Regularization of Production 336
  Shortening the Working Day 338
  Large-Scale Production 338
  An Extensive Market 341
  Standardization 341
  Age of the Industry or Plant 342
  Rapidity of Expansion 343
  Level of Wage Rates relative to other Costs 344
