Books of Related Interest

Issues in US-EC Trade Relations

Edited by ROBERT E. BALDWIN, CARL B. HAMILTON, and ANDRÉ SAPIR

In *Issues in US-EC Trade Relations*, North American and European trade specialists offer theoretical, empirical, and historical analyses of some of the major issues on which American and European Community officials disagree and also formulate realistic policies for settling present disputes. Contributors consider such topics as the legal aspects of trade between the two regions, agricultural policy, different ways the United States and members of the Community use embargoes, international trade in services, trade policy in oligopolistic environments, and the growing trend toward protectionism.

International Economic Cooperation

Edited by MARTIN FELDSTEIN

"International Economic Cooperation provides a readable, balanced, and provocative view of the prospects for fruitful international economic cooperation. The papers are realistic: each discusses the difficulties involved in reaching cooperative solutions or procedures as well as the benefits of doing so. The discussion among the conference participants is lively, interesting, and insightful. This volume contributes substantially to our understanding of the field. It will be influential in shaping thinking on international policy cooperation."—William H. Branson, Princeton University

Misalignment of Exchange Rates

Effects on Trade and Industry

Edited by RICHARD C. MARSTON

Contributors investigate the causes of misalignment and the extent to which observed movements in real exchange rates can be attributed to misalignment. These studies are conducted both empirically, through the experiences of the United States, Great Britain, Japan, and the countries of the European Monetary System, and theoretically, through models of imperfect competition. Also confronted are the issues of whether the effects of misalignment can be reversed once exchange rates return to earlier levels and how to avoid—or at least control—misalignment through macroeconomic policy.
