Subject Index

Accounting, national, 89–90
Allen index, 250, 263
Asset value, 127–30

BEA. See U.S. Department of Commerce, Bureau of Economic Analysis
Best geometric average (BGA), 43, 48, 50–51, 142
Bid-price indexes, 253–54

Capacity utilization, 153–54
Capital: asset efficiency method to measure, 124–27; estimating quality of, 132–34; evaluation of heterogenous, 130–32, 157; as factor of production, 41–46, 48, 84; measurement of, 120–21; measurement using hedonic method, 191–92; measuring wealth associated with, 127–30; perpetual inventory method to measure, 121–24
Capital consumption allowances, 72–73
Capital input: data sources and methodology for, 46–54; data sources and methodology for intermediate, 57–64; decomposition and analysis of, 23; depreciation in analysis of, 44–46, 50–54, 56–57, 72–73; index for, 70–71; intermediate, 54–60; measurement of, 41–46; uses for measures of, 153–54
Capital input method, 72–73
Capital stock: as distinct from capital flows, 134–37; measurement of, 137–43
Capital theory: asset efficiency in, 124–27; asset valuation and depreciation in, 127–30; heterogeneous capital in, 130–32; single homogeneous good case in, 121–24; technical change in, 85, 132–34
Capital utilization, 134–35
Census index (Pieper index), 250–52, 263–64
Census price index, 243–47
CES. See Constant elasticity of substitution
Chief statistical office (CSO), 424–27
Cobb Douglas production function, 20, 79
Component-price hybrid (CPH) index (Gordon index), 249–50, 252, 262–63
Constant elasticity of substitution (CES), 79
Construction deflators: alternative, 248–53; Department of Commerce, 239–48. See also Cost indexes; Price indexes
Cost indexes, 240, 246–53, 258–60, 268–69
CPH index. See Component-price hybrid (CPH) index (Gordon index)
CSO. See Chief statistical office

Dacy index, 248–49, 252, 262
Data sets: analysis of labor supply, 277–80; development for environmental economics, 322–27; framework for analyzing, 274–77
Data sources: for aggregate output and productivity, 67–76; for capital input, 46–54; for investment, 137–39; for labor demand, 280–86, 290–91, 296–97; for labor input analysis, 35–41; for labor market, 286–89, 290–92, 297; for labor
supply, 277–80, 290–92, 296; for labor union activity, 289; for measurement, 144; for output and intermediate input, 57–60; on saving and wealth, 164–73; for tax burden analysis, 347–61
Deflation methods: Department of Commerce, 239, 269–70; methodologies for, 260. See also Construction deflators
Deflators. See Construction deflators; Investment-good deflators
Depreciation: in analysis of capital input, 44–46, 50–54, 56–57, 72–73; discounted value method of, 73; relation to asset value of, 127–30. See also Capital consumption allowances; Capital input method
Economic benefits, environmental, 327–30
Economic growth: aggregate production model of, 24–26; neoclassical theory of, 20; research in, 19–21; sources of sectoral, 26–28; sources of U.S., 21–32. See also Capital input; Labor input; Output growth; Productivity growth
Efficiency patterns, 52–54, 124–27
Environmental policy: economic benefits of, 327–30; economic evaluation of, 305–22
Environmental standards, 300–305
Estimation indexes, 255–58
Federal Highway Administration (FHWA) index, 245, 247–53, 256, 268
Federal Reserve Flow of Funds, 164, 170–71
Haig-Simons income concept, 167, 344, 377, 381, 396–97
Handy-Whitman indexes, 245
Hedonic price indexes, 85, 226–28, 254–55, 268
Hedonic price measurement, 42, 134; in automobile price analysis, 216–20; for capital measurement, 191–92; development and use of, 188, 207–9; misconceptions about, 220–23; requirements for, 215–16; theory in, 209–12. See also Linking method
Heterogeneity: of capital goods, 130–32; of consumers, 166–67; in inputs, 23–24
Homogeneity in production function, 55
IGA theory. See Intergenerational altruism
Income: data for, 167–73; measurement of, 164–73, 178–79
Index number theory, 28, 33–35, 89
Information: access to, for tax burden research, 414; cost to increase supply of, 337–41
Input. See Capital input; Labor input
Intergenerational altruism (IGA theory), 165–66
Intermediate input, 54–64
Inventory methods, 41–42, 49–50
Investment: data sources for, 137–39; and national saving, 161, 164; for replacement purposes, 46; use of capital input measures for, 153
Investment-good deflators, 139–41. See also Perpetual inventory method
Keynesian saving/consumption behavior theory (KN), 165–66
Labor demand data, 280–86, 290–91, 296–97
Labor input: construction of data for, 32–35; data sources and methodology for, 35–41; data sources and methodology for intermediate, 57–64; decomposition and analysis of, 23; indexes for, 38–41, 69–70; intermediate, 54–60
Labor market data, 286–89, 290–92, 297
Labor supply data, 277–80, 290–92, 296
Labor union data, 289
Life cycle/permanent income hypotheses (LCH/PHH), 165
Linking method, 223–26
Multifactor productivity growth (MFP), measurement of, 154
National income and product accounts (NIPA), 28, 159, 162–73
Output: data sources and methodology for, 57–64; data sources and methodology for aggregate, 67–76; measurement at sectoral level of, 54; measurement of aggregate, 64–76
Output growth, 23. See also Capital input
Perpetual inventory method: data required for measurement using, 139–41; to measure capital, 121–24, 154–55
Price indexes: compilation of, 270–71; for construction output, 240–53, 260–64, 268. See also Bid-price indexes
Price measurement: hedonic technique for, 42; historical research in, 233–36; of missing prices, 189, 203; of vintage prices, 42–44
Price Statistics Review Committee (Stigler Committee), 187, 207, 220–21, 240–41, 248, 256, 260
Product accounts, national, 20–21
Production function: aggregate 19–21; 64–67, 79–88; and relative prices, 84–88; sectoral, 64–67, 76–79, 83; and technical change, 85; under uncertainty, 84–85
Productive capacity, 153–54
Productivity: data sources and methodology for, 67–76; measurement at sectoral level of, 54–57; measurement of aggregate, 64–76
Productivity growth, 23; data sources and methodology for, 57–64; modeling of, 79–88; rate of aggregate, 24–26
Proxy index, 243–44, 260
Rees Report, 21, 60
Rental price concept, 50–51, 135, 156; of capital input, 42; uses for, 44, 46, 48
Reswitching controversy, 24–25
Ricardian equivalence, 166

Saving, household, 167–80
Saving, national: aggregation or disaggregation to analyze, 173–76; data for, 167–73; U.S. rate of, 159–61, 164, 181
Saving/consumption behavior theories, 165–73
Technical change: embodied and disembodied, 85, 132–134; explanation vs. measurement of, 192–99
Turner index, 245, 247

U.S. Department of Commerce, Bureau of Economic Analysis (BEA), 137–39
U.S. Department of the Treasury, Office of Tax Analysis, microsimulation model, 381–98

Wealth: associated with capital, 127–30; measurement of human, 173. See also Asset value
Winfrey distribution, 141–42, 155–56

For over fifty years the Conference on Research in Income and Wealth (CRIW) has functioned as the premier research forum for economists who work on theoretical, conceptual, and empirical problems of economic measurement. This fiftieth anniversary volume celebrates progress in economic measurement, while stressing the important work yet to be done. Because policy decisions affecting the economic well-being of every American are based on economic data, improving the reliability of statistical data is as important today as it was when the CRIW first met in 1936.

In this volume, leading researchers address a broad range of theoretical and applied topics that demonstrate the essential measurement issues the field of economics must confront. These essays will be a useful introduction for students, as well as a valuable resource for researchers in government and academia. Zvi Griliches, Paul E. Pieper, Jack E. Triplett contribute papers on prices and output; Charles R. Hulten on capital; Daniel S. Hamermesh on labor; Michael J. Boskin on the measures of saving; Dale W. Jorgenson on measuring productivity; B. K. Atrostic and James R. Nunns on the measures of tax burden and the use of economic data in economic policy analysis; and Clifford S. Russell and V. Kerry Smith on data needed for environmental regulation.

"There is always the temptation to become another one of the dozens of conferences or projects that try to explain economic behavior, try to model the economy as a whole, try to analyze the effects of alternative government policies. Obviously those are very important activities and they are activities in which the National Bureau also pays a significant role, but I think the Conference on Income and Wealth is really unique and has a unique function. The conference provides the bedrock conceptual and quantitative work on which all further economic analysis must be based. I hope that we can continue and strengthen that tradition for the Conference on Research in Income and Wealth's second 50 years."

—Martin Feldstein

ERNST R. BERNDT is professor of applied economics at the Sloan School of Management, Massachusetts Institute of Technology.
JACK E. TRIPLETT is Chief Economist at the Bureau of Economic Analysis, U.S. Department of Commerce.
