Zeile, William, 260n6
Zona, J. D., 216, 228n25
Advertising: for antiulcer drugs, 291-94, 326; effect and elasticities of, 327-28; literature, 327; market-expanding, 278; pharmaceutical industry, 291-92; ready-to-eat cereal industry, 215
Air conditioner: impact of invention and dissemination, 20-21, 121-33
Antiseptics, 182-83
Antiulcer drug market: advertising for, 291-94, 326; analysis of growth in sales, 295-304; measuring marketing efforts of, 296-97; order-of-entry effects, 291, 305-6, 308-9, 312, 326; recommended additional research, 313; rivalry among companies, 280, 289, 291, 323; U.S. sales by drug type (1977-93), 283-87
Antiulcer drugs: anticholinergic agents, 279-80; detailing levels, 289-93; FDA approval for, 280-82; H₂-receptor antagonists, 277-78, 280; marketing of, 278; pricing policies, 285, 288-89
Arithmetic mean: BLS import price indexes, 254-55, 263-70; Carli index formula, 424-26, 432-33; for elementary components of CPI, 424-25; geometric mean price index, different from, 425-27
Attributes: antiulcer drugs, 312; of automobiles, 74-76, 79-81; brand choice based on, 229; as indicators of quality, 79; measurement of computer power, 343-48; of transportation services, 6. See also Characteristics
Automobiles: attributes for hedonic regressions, 79-81; growth of and changes in industry, 71-72; price evolution, 77-79; quality-adjusted price indexes, 84-91; rate of quality change, 86-87; system design evolution, 97-100; technology of, 73-74

Best-practice technologies: changed thinking, 156; diffusion of, 152-60; influence of germ theory of disease, 160-86
Bias: BLS official import price index, 254-55, 263-71, 276; in chaining, 397; commodity-substitution, 428; in computation of price indexes, 428; condition for price index, 406; in Consumer Price Index (CPI), 4, 431-43; elementary index functional form, 424-27, 432; in estimates of computer market surpluses, 341-42; evaluation of component indexes, 407-9; for lighting in consumer spending, 61-62; in lighting prices, 43-44; linking, 429-31; in measurement of real income growth, 60; new-goods, 428, 430; new-introductions, 395, 430-31, 433; outlet-substitution, 428-29, 432; potential for all consumption, 62-63; potential in import price index, 251-55; in price indexes, 55-58; in quality-adjusted prices, 91-96; as relative concept, 427; seller-substitution, 404-5; with substitution in Laspeyres price indexes, 403-4; in trend reversion of sellers’ prices, 405-7
BLS. See Bureau of Labor Statistics (BLS)

Brands: barriers to entry for new, 215–16; introductions in ready-to-eat cereal industry, 213–16; share in ready-to-eat cereal industry, 214–15

Bureau of Economic Analysis (BEA) price indexes, 451

Buyer's surplus. See Consumer's surplus

Carli price index, 424–26, 432–33

CES. See Constant elasticity of substitution (CES); Consumer Expenditure Survey (CES), BLS

Chadwick Report (1842), 154

Chaining: in component indexes, 405–7; new products in price indexes, 397–98

Characteristics: approach to new technologies, 68–70; automobile, 103–6; of computer systems, 342–45, 363; of process innovations, 113. See also Attributes

Characteristics, service: hedonic or shadow prices, 39–40; labor cost of, 50; of light, 45, 48, 67; price and production of, 39; price mismeasurement, 60–61; prices of old and new good, 42–43; productivity growth, 50; true price of lighting, 41–45

Commodities and Services Survey (C&S), 380–81

Commodity-substitution bias, 428, 431–32

Competition: antiulcer drug market, 280, 289, 291, 323; automobile industry, 72; with introduction of new goods, 239; ready-to-eat cereals, 215–17

Competition, imperfect: link to new goods, 243–46; with new-brand introduction, 210; in valuation of new goods, 231–34

Competition, perfect: with new-brand introduction, 210; new goods valuation under, 211–13

Component indexes: bias in basic, 407–9; chained, 405–7; geometric means used in basic, 409–15; substitution bias in Laspeyres, 403–5. See also Consumer Price Index (CPI); Laspeyres component indexes

Computer industry: benefits to buyers from innovation, 23, 330; effect of demand, 333; estimates of changes in, 345, 347–50; extension of capabilities, 332; price of old and new generations, 332; price per computing unit, 331–32; technical change in, 364. See also Software industry

Computer Intelligence Corporation (CIC) data, 344

Computers: in Canada’s IPPI, 446, 451–57; changes in system characteristics (1968–81), 343–45, 348f; development of mini-computers, 334; in Japan’s DWPI, 464–73; relation of computing power to quality and cost, 345, 347; variables measuring computing power, 347–48

Computers, mainframe: definitions, 341–42; market share and price, 342–43; substitutes for, 333–34; technological change (1968–81), 331–34

Consumer Expenditure Survey (CES), BLS, 379, 387

Consumer Price Index (CPI): biases in, 4, 25, 427–32; BLS setting of base period, 375–76; component indexes, 400–403; computation of elementary components, 424–25; as constant-quality price index, 382; Consumer Expenditure Survey (CES), 379, 387; consumer marketplace structured by, 378; cost-of-living measurement by, 390, 393; effect of Laspeyres and geometric mean on components of, 410–15; effect of trend reversion on component indexes, 406; entry-level items (ELIs), 378–81, 386–87; function of and uses for, 375, 391–92, 407; imputation of price change, 383–86; as Laspeyres price index, 9, 388, 393–95; market basket, 388; new-product
effect on, 376; new-product introduction, 24; new-product substitution procedure, 24, 381–86; overstatement of, 210; problems of new products for, 375–78, 387–88; substitutes within categories, 389–90; surveys, 379–81, 402; theory of, 209; treatment of same product price differentials, 251

Consumer Price Index (CPI) component indexes: bias in, 406–9; seller selection for, 400–403

Consumers: behavior related to new-product introduction, 118–21; brand choice under perfect and imperfect competition, 216–35, 237–39; consumer demand model, 146–52; CPI marketplace of, 378; health-related demand, 144–46; preferences, 43, 144

Consumer's surplus: before and after new goods' complements, 8–9; in climate control, 133; computer systems, 351–56, 368–71; conditions for overestimate of, 230; in demand-supply computing power model, 339–40, 351–56, 365–68; with entry of new product, 111–14; for new-brand cereal introduction, 228, 238–40; relation to true COL index, 10; in value of new goods, 210

Consumption: bias for all, 62–64; by degree of qualitative change, 57–60; health-related changes in, 160–86; of old and new products, 378; spending for lighting effect on, 3–4; CPI viewed as, 388; definition, 2; differences from Laspeyres price index, 405; function of, 388; Konüs, 403, 404, 427; Pollak's social, 427; relation to consumer's surplus concept, 10; true, 3–4, 7–10

Corporate Service Price index (CSPI), Japan, 457

Cost-of-living index (COL index): cost of lighting effect on, 3–4; CPI viewed as, 388; definition, 2; differences from Laspeyres price index, 405; function of, 388; Konüs, 403, 404, 427; Pollak's social, 427; relation to consumer's surplus concept, 10; true, 3–4, 7–10

CPI. See Consumer Price Index (CPI)

Data: imports of U.S. multinationals (1982, 1987), 259; nineteenth-century empirical, 156; for true price of light, 44–49

Data collection: CPI program, 380–81; emergence of, 154; recommended for BLS import price index, 271, 276

Demand: for air-conditioning, 133; computing capacity model, 334–36, 345, 347–51; consumer model, 146–52; factors in antulcer drug market, 295–304, 323–26; household's heating and cooling, 137–39; new-brand cereal choice model, 217–23; new goods with virtual price, 211; U.S. import, 265–70; willingness to pay based on, 12

Demand structure: new goods under imperfect competition, 231–35, 243–44; new goods under perfect competition, 211–29

Detailing, pharmaceutical industry, 283, 289–93, 296

Discoveries, disease-related, 181–83

Disease: avoidance through food preparation changes, 160–64; changes in beliefs about, 152–60; classification of causes, 187–90; explanations for decline of, 144–46; gastric and duodenal ulcers, 279; gastroesophageal reflux, 279; insects as carriers of, 178–80; perceived social nature of some, 184; public policy to combat, 177–78; reduced morbidity from, 204; understanding and treatment of, 180–81

Domestic Wholesale Price Index (DWPI), Japan: computers in, 464–70; construction, 457–58; hedonic pricing and weights in, 465–69; market basket, 458; pricing principle, 458

DWPI. See Domestic Wholesale Price Index (DWPI), Japan

Elasticities: of advertising, 327–28; income, of import demand, 249–50, 265–70; new goods under imperfect competition, 231–35, 243–44; new goods under perfect competition, 211–29; prices of antulcer drugs, 303, 307–10. See also Constant elasticity of substitution (CES)

ELIs. See Entry-level items (ELIs)

Energy supply technology, 168–73
Entry-level items (ELIs): CPI definition of, 387; as CPI item stratum, 378–79; in CPI sample rotation system, 386–87; in CPI surveys, 379–81

Firms: diffusion of best-practice technology among, 153; investment in air-conditioning, 124–28; multinational firm intracompany imports, 259–60, 267–68; multiproduct firms under imperfect competition, 231–34, 243–44; price setting by monopolist, 244–45; single-product firms under imperfect competition, 231–34, 243–44. See also Automobiles; Computer industry; Pharmaceutical industry

Fisher-Ideal index, 296, 393, 428, 433

Food and Drug Administration (FDA) approval, 278, 280–82, 296, 312, 323

Gastroesophageal reflux disease (GERD): definition and occurrence, 279; FDA approval for treatment of, 296, 312; treatment of, 312

Geometric mean: for aggregate CPI components, 425–27; in basic component indexes, 409–15; index number formula, 425–27, 433; as measure of price change, 409–10; of sellers' prices, 409–10

Geometric mean price index: difference from arithmetic mean index, 426–27; rates of change compared to Laspeyres index, 25

GERD. See Gastroesophageal reflux disease (GERD)

Germ theory of disease: changes influenced by, 21, 160–86, 201–3; diffusion, 152–60, 201–5; post-1914 gains, 204; as scientific breakthrough, 146, 158–60

Goods: service characteristics of, 39–40; substitution bias in Laspeyres index, 403–4

Goods, new: availability concept, 439–40; in Canada's IPPI, 444–46; complements to, 7–11; consistency processing in Japan, 463–64; consumer's surplus concept, 10–11, 111–14, 210; de facto operational definition, 440; definitions, 438–40; deleted from and added to Japan's DWPI (1990), 459–63; demand with virtual price, 211; distinguished from existing goods, 11–13; evaluation (Hicks's theory), 211; impact on industry pricing, 245–46; introduction in Japan's DWPI (1990), 458–64; introduction under imperfect competition, 213; link to imperfect competition, 243–46; market behavior definition, 439; measurement of value of, 13–16; monopoly pricing of, 110–11; new-goods bias, 430–31; omission of effect from current CPI, 209–10; relation of old goods to new varieties, 440–41; valuation under perfect competition, 211–13. See also Products, new

Health: components of household, 145–46; consumption practices related to, 160–86; production function inputs, 177

Hedonic method: automobile attributes in, 80–81, 102–4; automobile price regressions, 81–84; limitations in automobile hedonic function, 95, 102–6; to measure automobile price evolution, 71; to measure quality change, 15–16, 95–96; use in Japan's DWPI, 464

Hedonic price indexes: automobile, 72–84; automobile, combined, 89–90; automobile index biases, 91–97; for low-priced Ford models, 19–20; upward bias, 106

Hedonic pricing: for computing equipment in Canada, 452; to determine effect of supply shift, 10–11; Japan's DWPI, 465–66; mismeasurement conditions, 344; of service characteristics, 40; for true price of light, 39

Hicks-Rothbarth theory, 210–13, 231

Hotelling-Gorman-Lancaster model of brand choice, 229–31

Books of Related Interest

Price Measurements and Their Uses
Edited by Murray F. Foss, Marilyn E. Manser, and Allan H. Young
This volume brings together academic economists and those responsible for official price indexes to present outstanding research on price measurement. It focuses on prices for computers and other high-tech products, using hedonic techniques, and addresses problems affecting prices of food, clothing, and industrial commodities.
NBER Studies in Income and Wealth, Volume 57

Output Measurement in the Service Sectors
Edited by Zvi Griliches
In this timely volume, leading experts from government and academia suggest that current measurement methodology may be underestimating the contribution of services to productivity growth in the economy as a whole. The contributors look at the consumer price index, labor productivity indexes, wholesale and retail trade, the stock market, banking, education, day care, and transportation.
NBER Studies in Income and Wealth, Volume 56

International Economic Transactions
Issues in Measurement and Empirical Research
Edited by Peter Hooper and J. David Richardson
This ambitious volume examines the quality of current data and analytical procedures and proposes innovative research designs and methods for data enhancement. Leading researchers discuss the measurement of international trade flows and prices, compare international levels of manufacturing output, and assess the extent to which the United States has fallen into debt to the rest of the world.
NBER Studies in Income and Wealth, Volume 55
