

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: Geography and Ownership as Bases for Economic Accounting

Volume Author/Editor: Robert E. Baldwin, Robert E. Lipsey and J. David Richards, editors

Volume Publisher: University of Chicago Press

Volume ISBN: 0-226-03572-7

Volume URL: <http://www.nber.org/books/bald98-1>

Publication Date: January 1998

Chapter Title: List of Contributors, Indexes

Chapter Author: Robert E. Baldwin, Robert E. Lipsey, J. David Richardson

Chapter URL: <http://www.nber.org/chapters/c7030>

Chapter pages in book: (p. 335 - 348)

Contributors

Robert E. Baldwin
Department of Economics
1180 Observatory Drive
University of Wisconsin–Madison
Madison, WI 53706

Magnus Blomström
Stockholm School of Economics
P.O. Box 6501
S-113 83 Stockholm, Sweden

Mark E. Doms

The Economics of New Goods

Edited by TIMOTHY F. BRESNAHAN *and* ROBERT J. GORDON

New goods are at the heart of economic progress. But the value created by new goods must somehow be converted into an exact quantitative measurement if official data on inflation, such as the Consumer Price Index, are to represent accurately the theoretical concept of a true "cost-of-living" index. The eleven essays in this volume include historical treatments of new goods and their diffusion; practical exercises in measurement addressed to recent and ongoing innovations; and real-world methods of devising quantitative adjustments for quality change.

NBER Studies in Income and Wealth, Volume 58

Price Measurements and Their Uses

Edited by MURRAY F. FOSS, MARILYN E. MANSER, *and*
ALLAN H. YOUNG

In an economy characterized by frequent change in technology, in the types of goods and services purchased, and in the forms of business organization, keeping track of price change continues to pose many difficulties. Price change affects the way we perceive changes in such basic measures as real output, productivity, and living standards. This volume, which brings together academic economists with those responsible for official price indexes, presents outstanding research on price measurement.

NBER Studies in Income and Wealth, Volume 57

Output Measurement in the Service Sectors

Edited by ZVI GRILICHES

In this volume, leading experts from government and academia suggest that current measurement methodology may be underestimating the contribution of services to productivity growth in the economy as a whole. The contributors look at the Consumer Price Index, labor productivity indexes, wholesale and retail trade, the stock market, banking, education, day care, and transportation.
