</table>
Bank loans: changing levels in financing of firms (1896–1988), 277–80; compared to intermediated loans, 233–38; in composition of intermediated loans, 230–32; with credit controls, 242, 286–88; impact of risk-based capital requirements, 237–38; in lending view theory, 263–64; in model of monetary transmission, 265–70; supply of and rates for certificates of deposit, 234–37; to unincorporated business (1900–1989), 280–83. See also Loans and lending; Nonbank intermediaries

Bank reserves: control of volume by Federal Reserve, 10–11; holding of securities and nonreserve-dependent instruments, 233–38; required levels, 52–54. See also Reserve requirements

Banks: historical analysis of bank assets and liabilities, 270–77; link between deposit-taking and loan-making functions, 232–34. See also Reserve requirements

Bonds: bank issues in model of monetary transmission, 265–70; effect of changes in spread between loan and bond rates, 283–90; proposal for indexes as indicators of inflationary expectations, 97

Business cycle (link between M2 growth and nominal GDP), 16

Capital requirements, risk-based, 237–38
Certificates of deposit (CDs), 234–37
Commercial paper: in composition of intermediated loans, 230–32; rate as indicator of monetary contraction and credit crunch, 303–4; spread between loan-bond commercial paper rates (1890–1991), 288–90, 304–6

Commodity prices. See Prices

Core inflation: definitions and measures of, 3, 197–203, 214, 216–18; estimates of, 203–8, 214–15; money supply growth as measure of, 208–10; techniques to measure, 195–96

CPI inflation, 210–14, 218–19

Data sources: for analysis of effect of monetary contractions on lending channels (1919–91), 290–91; for analysis of sacrifice ratio, 166; balance sheet data for firms, households, nonfinancial corporations, and unincorporated, nonfarm businesses, 297–98; for loan and bond rate spreads (1890–1991), 286; in monetary targeting analysis, 56; in test of lending channel strength (1884–1991), 294–95

Disinflation (continued)
Sacrifice ratio; Trend inflation; Volcker disinflation

Economic performance: approaches based on variance in nominal GDP growth rate, 9–10; given hypothetical policy of nominal income targeting, 83–90, 93–94

Federal funds rate: effect on bank lending, 243–44; maintaining level, 10–11; use by Federal Reserve to control M2, 51–54, 55

Federal Open Market Committee (FOMC): disinflationary policy: post–World War II, 307–8; federal fund rate targeting by, 10–11; hypothetical GDP targeting by, 63

Federal Reserve: ability to control M2, 51–54, 66–67; behavior of nominal income and forecast related to policy, 82–83; control of bank reserve volume, 10–11; determinants of disinflation decision, 324; disinflationary policies: post–World War II, 307; hypothetical targeting rule for GDP, 38–45; model of disinflation decision, 321–31; model of nominal income targeting, 83–91, 93–94; role of intermediation in lending channel of monetary transmission, 226, 229–38; standard indicators for monetary policy, 95; use of forecasts, 78–79

Federal Reserve Act (1913): effect on commercial paper market, 293; reserve requirements of, 273

Financial intermediation: as condition of lending channel of monetary transmission, 225, 227–29; firm dependence on intermediated loans, 227–29; nonbank, 227–33, 265–70

Firms: historical changes in composition of finance, 277–83; in model of monetary transmission, 265–70; price adjustment practices, 119–27, 147–48, 150–54. See also Bank loans; Commercial paper; Loans and lending; Price adjustment; Price setting

Forecast errors: in CPI inflation forecast model, 211–14, 218; in model of nominal income targeting, 85–90, 93

Forecasts: commodity prices as forecasters of inflationary expectations, 96–100; comparison of hypothetical monetary policy rule predictions to professional, 49–51; of disinflation decision determinants in disinflation model, 324–30; in implementation of monetary policy rules, 78–79; indicators of future inflation, 95–96; nonstandard indicators with low forecasting powers, 101–2; predictive power of consensus nominal income, 79–82; price measure uni- and multivariate one- to five-year methods to forecast inflation, 210–14; relation of money supply to inflation, 208–10; time-series behavior of nominal income, 79–83; univariate and multivariate methods for CPI inflation, 210–14, 218–19. See also Predictions

Goodhart’s Law, 15
Government role, proposed, 178
Gross domestic product (GDP): economic variable volatility with targeting rule for nominal, 38–44; goals of monetary policy related to, 8–10; hypothetical optimal targeting of growth rate of nominal GDP, 38–45; predictive content in monetary aggregates for nominal and real GDP, 16–26; reduction of gap between real and potential real, 8–10; simulation of nominal GDP path under hypothetical optimal policy rule, 44–45; simulation of nominal GDP under simpler M2 growth rules, 47–49; strength and stability of nominal GDP link to M2 money aggregate, 7, 16–35, 54–55. See also Output

Income, nominal: as basis for monetary policy rules, 74–77; form of monetary policy rule for targeting, 77; model of Federal Reserve targeting of, 83–91, 93–94; relation of Federal Reserve policy to behavior and forecast of, 82–83; targeting forecasts of, 79; time-series behavior, 79–83

Indicators: of inflation: creation and effect of feedback loops, 105–11; used by Federal Reserve for monetary policy, 95

Indicators, nonstandard: commodity prices, 96–100; as forecasters of inflation, 96–111; with low forecasting power, 101–2; possible use for monetary policy, 95, 112–13

Inflation: comparison of long-horizon consumer price index inflation, 211–14; ef-
effect of degree of trade openness on, 179–80; estimates of inflation process: comparison of post–World War II studies, 313–20; forecasts in commodity prices, 96–100; forecasts in money growth, 208–10; forecasts of CPI inflation, 210–14; forecasts using nonstandard indicators, 96–105; forecasts with policy change, 309–21; goals of monetary policy related to, 8–10; period of disinflation in, 157; present discounted value of level of: model of Federal Reserve disinflation decision, 324–31; self-fulfilling expectations of, 105–12; specification of inflation process: post–World War II, 309–12; speed of disinflation related to, 171. See also Core inflation; CPI inflation; Disinflation; Sacrifice ratio; Trend inflation; Zero inflation proposal

Lending channel: with changes in structure of financial system (1896–1988), 270–83; conditions for, 225–26; conditions for in model of monetary transmission, 268–69; criteria for, 223; differences from money channels, 222–23; evidence for, 240–50, 256–58, 261, 283–97; Federal Reserve role in financial intermediation, 226, 229–38; financial intermediation as condition for, 225, 227–29; impact of money on output assuming operational, 269–70; in model of monetary transmission, 265–70; quantifying impact, 250–53; test of strength, 293–96, 301–2

Lending view theory: conditions for and microfoundations of, 225–27; confirmation, 305; early work on, 224–25; of monetary transmission, 4, 222–24, 263; tests using cross-sectional data, 247–50

Loan rates: effect of changes in spread between bond rates and, 283–90, 303–4; factors influencing behavior of, 303

Loans and lending: correlation with output (1884–1991), 294–96, 304; effect of monetary policy on, 243–47; to firms, corporations, and unincorporated businesses, 277–82; intermediated, 226–38; in Japan, 246; in model of monetary transmission, 265–70. See also Bank loans

Monetary aggregates: predictive content for nominal GDP, 16–17; stability of link of M1 and interest rates to nominal GDP growth, 30–38; strength and stability of M2 link to nominal GDP, 7, 16–30

Monetary contractions: changes in and behavior of spread between loan and bond rates in, 283–90; effect on lending with given mix of variables over time (1919–91), 290–93, 304–6; relation to bank lending (1896–1988), 270–72, 304

Monetary Control Act (1980), 272–73

Monetary policy: adjustment of monetary variables to make, 10–13; based on indicators forecasting inflation, 102–11; benefits and characteristics of rules for, 72–74; commodity prices as nonstandard indicators of, 96–100; disinflationary Federal Reserve policy: post–World War II, 307–21; effect on lending process, 243–47; goals, 8–10; impact on output and prices, 188; in lending view theory of monetary transmission, 222; model of Federal Reserve nominal income targeting, 83–91, 93–94; model of mechanism for transmission, 265–69; nominal income as object of, 74–77; optimal speed of disinflation in, 170–74; relation of actual policy to nominal income and its forecast, 82–83; at start of disinflation, 10; use of nonstandard indicators in, 95–102

Monetary policy rules: active targeting rules to stabilize GDP growth, 12–13; based on nominal income, 74–77; benefits, characteristics, and effects of monetary policy rules, 72–74; comparison of historical and current principles, 71; example of rule creating feedback loop, 105–11; forecasts to enforce, 78–79; ideas for future research, 64–66; implementation, 77–79 nominal income targeting, 91–93; performance of hypothetical optimal policy rule for growth of nominal GDP, 38–45, 54, 63–64; performance of simpler models to target nominal GDP, 46–49, 54, 63–64, 66–67; related to long-run rate of inflation, 9–10; specification of, 67–68; usefulness of, 13–15

Monetary transmission. See Lending channel Lending view theory; Money channel; Money view theory

Money channel: differences from lending channel, 222–23; empirical evidence,
Money channel (continued) 302, 305–6; in model of monetary transmission, 265–70
Money supply: conditions for increase of M1, 52; Federal Reserve action that increases M1, 52; growth as forecaster of inflation measures, 208–10; impact on output in model of monetary transmission, 269–70
Money supply (M2): constant growth proposal (Friedman), 11–12, 13–14; Federal Reserve ability to control, 51–54, 55; predictive content for nominal GDP growth, 16–20, 54; predictive content for real GDP growth, 21–24; as predictor of nominal GDP, 54; tests for stability of relationship to nominal GDP, 24–30, 57–60
Money view theory: of monetary transmission, 4, 221–22, 263
National Banking Act (1864), 272–73
Nonbank intermediaries: in model of monetary transmission, 265–70; significance and future of, 229–33
Output: correlation with lending (1884–1991), 294–96, 304; effect of gradual versus speedy disinflation on, 171; effect of money in model of monetary transmission, 269–70; during inflation, 186; as measure of disinflation cost, 184–85; at start of disinflation period, 160; during Volcker and Greenspan disinflations, 184–85. See also Gross domestic product (GDP); Trend output
Predictions: of base money and M1 of future nominal GDP, 33–35; comparison of hypothetical money-growth policy rules to economic forecasts, 49–51; consensus forecast power to predict nominal income, 80–83; of future inflation in commodity prices, 99–100; in monetary aggregates for future nominal and real GDP growth, 16–26. See also Forecasts
Present discounted value (of inflation and unemployment), 324–31
Price adjustment: frequency, lags, and basis of firm, 120–27, 147; imperfect in lending view theory, 226, 238–41; opinions on costs of, 131–37, 148, 153. See also Price stickiness
Prices: commodity prices as indicators for monetary policy, 96–100; elastic price targets as class of monetary policy rules, 74; as forecasters of inflation over one to five years, 210; judgment of quality in price setting, 144–47; monetary policy elastic price targets, 74–75
Price stabilization: proposed action by Federal Reserve, 96–100; role of monetary policy in, 74–77
Price stickiness: adjustment costs of price changes, 131–37; evidence for, 119–22; reasons for, 122–27; stylized facts, 151–52; theory of constant marginal cost, 140–44. See also Price adjustment
Reserve requirements: changes over time in bank, 272–77; tax, 53
Sacrifice ratio: based on identification of aggregate demand and supply shocks, 189–93; defined, 3, 156, 160; differing estimates of, 156–57; effect of differences in wage setting on, 174–76; effect of disinflation pace on, 170–74; effect of trade openness on, 179–80; in identified disinflation, 166–70. See also Trend output
Securitization, 301
Shocks: in core inflation analysis, 197–203, 217–18; effect on econometric inference, 41–45; firm response to cost and demand shocks, 121–22; identification of and response to monetary policy, 258–60; lending channel transmission of, 270–77; monetary response to price level shock, 74–77; as noise in price data, 195–96; in sacrifice ratio analysis, 161, 166, 170–76; structural model to identify, 189–93; time series of shocks to nominal income, 85
Time series: behavior of nominal income and its forecasts, 79–83; in tests of lending channel existence, 241–47

Trend inflation: defined, 156, 157, 166; during disinflation, 157–60, 166; effect of, 177–78; relation to sacrifice ratio, 160

Trend output: basis for measuring sacrifice ratio, 180; definition and determination of, 160–61; during disinflation, 161, 164–66

Volcker disinflation: effect on inflation of, 169–70, 320–21, 330–31; sacrifice ratio and costs of, 157, 169–70, 184

Wage responsiveness index, 175–76

Wage rigidity: effect on variation in sacrifice ratio, 174–76; index of nominal wage rigidity, 176; Keynesian model, 117; theories of, 118

Wage setting: effect of differences in, 174; government role in disinflation, 178

Zero inflation proposal, 187
Economists and policymakers alike are concerned with how best to achieve such broad objectives as stabilizing employment and prices and fostering economic growth. In *Monetary Policy*, leading economists discuss applied aspects of monetary policy and offer practical new research on the timing, magnitude, and channels of central bank actions. The authors evaluate a variety of policy rules based on monetary aggregates, nominal income, and commodity prices; analyze the behavior of prices and inflation; examine the monetary transmission mechanism; and explore the causes and effects of the Federal Reserve’s shift to an explicitly disinflationary policy, a shift which has been made several times since World War II.

This volume makes an important contribution to monetary policy research and will be of special interest to central bankers and academic economists.

"Required reading for any serious student of monetary policy and its role as a stabilization tool."
—Abdur R. Chowdhury, *Southern Economic Journal*

"The collection will be of great interest to monetary specialists and graduate students, but most of the papers are also quite accessible to general economists."
—Robert Coen, *Journal of Economic Literature*

"Mankiw presents the reader with a lively . . . discussion by authors and discussants who make up a veritable Who’s Who in the field."
—Stephen J. Perez, *Eastern Economic Journal*

N. Gregory Mankiw is professor of economics at Harvard University and director of the Monetary Economics Program at the National Bureau of Economic Research.
