Subject Index

Base-country invariance, 17
Bortkiewicz formula, 331, 344, 348, 349
Brazil: alternative price-level calculations, 220-25; Broad National Consumer Price Index (IPCA), 212-13; estimating interarea price levels, 214-20; interarea income differences, 219-20; interarea price levels, 214-20, 223-29; price data collection, 212-14, 227; price statistics, 211-12

Chaining: across countries, 109; chronological, 109; linking bilateral comparisons as, 109; using spanning trees for, 109-10
Circularity: across several aggregation levels, 131-32; regression methodology for imposing, 124. See also Transitivity
Circularity test (Fisher), 32-33
Communication: comparisons of Brazilian, Mexican, French, and American, 287-310, 314t

Comparative advantage: factors in formation of, 420-21, 420-22; influence of total factor productivity on, 421-22; revealed comparative advantage, 427

Comparisons, bilateral: bilateral index number, 13; chaining across countries, 109-12; items used in ECP Group II (1980-93), 241, 247-48t; Romania and Moldova (1993), 261-70

Comparisons, international: economic approach, 89; history of, 2-3; matrix of binary, 89-90; multilateral chaining, 109-12; shortest path method, 113-16; spanning trees to link vertices, 110-11

Comparisons, intracountry: history of, 3-4
Comparisons, multilateral: axioms or tests for, 14-20; of Baltic countries and Austria (1993), 251-59; choice of index number formula for, 89; comparing all countries simultaneously, 109; comparing by linking bilateral comparisons, 109; exchange rate method, 23; Geary-Khamis average price method, 26-28, 98-105; generalizations of Van Yzeren's unweighted and weighted balanced methods, 39-46, 94-97, 106-7; Gini-EKS system, 31-37, 94-98; own share system, 37-39, 97-98; symmetric mean average price and quantity methods, 23-26; Van Yzeren's unweighted average price and basket methods, 28-31, 93-94. See also Chaining

Compensation costs: indexes comparing employee, 171; place-to-place comparisons, 171, 172

Compensation indexes: comparison of interarea, 206-7; data to construct interarea, 180-84; interarea, 186-96; multilateral, 179-80; regressions in construction of interarea, 184-86; U.S. interarea, 186-95. See also Wage indexes
Consumer price index (CPI): classification scheme of product prices, 138, 144–46
Consumer unit, 125
Country-partitioning test, 18
Country-product-dummy (CPD) method: in constructing place-to-place price indexes, 133; to estimate Brazilian interarea price levels, 216–29; to generate price parities, 5; regression, 133–34
CPEs. See Centrally planned economies (CPEs)

Data collection: Brazil, 212–14, 227; for Romanian-Moldavian comparison, 263
Distributive services: defined, 279n1; value-added and employment in Brazil, Mexico, France, and United States (1970–93), 280–85, 318t

Drift, 141

ECP. See European Comparison Programme (ECP)
Edges: connecting two vertices in a spanning tree, 110; in minimum spanning tree method, 117
EKS (Elletó, Köves, Szulc) method, 31–37; CCD implementation of, 124; to estimate Brazilian interarea price levels, 221
Embodying hypothesis, 451
Engel’s law, 105–6

Eurostat: PPP classification for medical and health care goods, 233–38
Exchange rates: compared to UVRs in four East European countries (1987–93), 334–35

Factors of production: comparison across countries, 463–64
Federal Employee Pay Comparability Act (1991), 171, 210

Fisher indexes: as bilateral index formula, 112; direct and chained Fisher PPPs in minimum spanning tree method, 117–19; direct and chained Fisher PPPs in shortest path method, 114, 116; ideal quantity index, 46, 52; index number method to estimate Brazilian interarea price levels, 220–21; own share and weighted balanced methods, 47; U.S. relative to foreign prices for pharmaceuticals (1981–92), 387–88

Geary-Khamis (GK) method, 26–28, 52; to estimate Brazilian interarea price levels, 220–21; for multilateral comparisons, 4

Germany: employees in pharmaceutical firms (1975–90), 389, 392t; growth in pharmaceutical production (1970–90), 389–91; investment in pharmaceutical industry (1975–90), 400–403; labor productivity
Indexes: comparing employee compensation costs, 171; of employment cost index (ECI), 180–84, 196–97; interarea indexes of U.S. wages and compensation, 186–93; multilateral from bilateral indexes in spanning tree, 110

Index numbers: axioms related to, 88–89
Index numbers, bilateral: in bilateral comparisons, 13; edge connecting spanning tree vertices denotes, 110
Index numbers, multilateral: economic approach, 20–23; exchange rate method, 23, 91; Geary-Khamis average price method, 26–28; generalizations of Van Yzeren's unweighted balanced model, 39–42; generalizations of Van Yzeren's weighted balanced method, 42–46; Gini-EKS system, 31–37; own share system, 37–39; symmetric mean average price methods, 23–24; symmetric mean average quantity method, 24–26; Van Yzeren's unweighted average basket method, 30–31; Van Yzeren's unweighted average price method, 28–30

Index number theory: additivity test as multilateral property, 20, 49–51; axioms or tests for multilateral, 14–20; bilateral, 13–14; comparison of three countries using multilateral method, 79–84; evaluation and tradeoffs of multilateral methods, 23–52; multilateral, 13–14; multilateral generalization to bilateral comparisons, 20–23; proofs that multilateral methods satisfy a given test, 53–79; superlative multilateral system, 20–23, 49–52

Inflation: measured by spanning trees, 110
International Comparisons of Output and Productivity (ICOP), 4, 6–8, 323

International Comparisons Program (ICP), 1–4, 7–8; broad product groups in OECD countries, 457–59; European Comparison Programme (ECP) as Group II in, 239–49; narrow specification approach, 124–25

IPCA (Broad National Consumer Price Index), Brazil, 212–13

Paasche index: as bilateral index, 112; unit value ratio, 340–48. See also Paasche-Laspeyres indexes

Paasche-Laspeyres indexes: decomposition of unit value ratio, 344–47, 355; spread, 272–73; spread between countries, 112; spreads in minimum spanning tree method, 117–18; spreads in shortest path comparison method, 111, 113–16; unit value ratios in binary comparisons, 340–44

Paasche-Laspeyres spread (PLS) index: definition and properties, 112; in minimum spanning tree method, 117–19; in shortest path chaining, 113–16

Parities: country-product-dummy (CPD) method to generate price parities, 5; decentralized computing of international, 141–42; making bilateral parities transitive, 134–39; Törnqvist multilateral system of, 173. See also Purchasing power parity (PPP)

Penn World Tables, 1, 479–80

Per capita concept, 480, 482

Perron-Frobenius theorem, 56

Pharmaceutical firms: differences in functions, 382–83; employment (1975–90), 389, 392t; incentives in biased regulation for, 376–78; investment in R&D, 383

Pharmaceutical industry: cross-country comparison of investment in (1975–90), 400–403; heterogeneity of products in, 381–82; multifactor productivity growth, 403, 406–411, 417–18; price indexes used for productivity measurement in, 384–400

Labor services: adjustment for quality in local areas, 178–79; hedonic regression for quality adjustment, 172–73, 199–203; index number concepts including heterogeneous, 173–76; interarea compensation indexes for, 205–8; in interarea wage and quality-adjusted wage indexes, 186–93; quality as component of compensation cost index, 172

Laspeyres index: as bilateral index, 112; unit value ratio, 340–48. See also Paasche-Laspeyres indexes

Paasche index: as bilateral index, 112; unit value ratio, 340–48. See also Paasche-Laspeyres indexes

Paasche-Laspeyres indexes: decomposition of unit value ratio, 344–47, 355; spread, 272–73; spread between countries, 112; spreads in minimum spanning tree method, 117–18; spreads in shortest path comparison method, 111, 113–16; unit value ratios in binary comparisons, 340–44

Paasche-Laspeyres spread (PLS) index: definition and properties, 112; in minimum spanning tree method, 117–19; in shortest path chaining, 113–16

Parities: country-product-dummy (CPD) method to generate price parities, 5; decentralized computing of international, 141–42; making bilateral parities transitive, 134–39; Törnqvist multilateral system of, 173. See also Purchasing power parity (PPP)

Penn World Tables, 1, 479–80

Per capita concept, 480, 482

Perron-Frobenius theorem, 56

Pharmaceutical firms: differences in functions, 382–83; employment (1975–90), 389, 392t; incentives in biased regulation for, 376–78; investment in R&D, 383

Pharmaceutical industry: cross-country comparison of investment in (1975–90), 400–403; heterogeneity of products in, 381–82; multifactor productivity growth, 403, 406–411, 417–18; price indexes used for productivity measurement in, 384–400
Pharmaceutical price indexes: Divisia country-specific indexes, 414; Fisher cross-national index, 413

Pharmacy benefit management companies, United States, 375

Price indexes: bilateral, 167; chronologically chained, 110; fixed-base-price index, 110; GDP, PPI, and Divisia pharmaceutical price indexes, 384–85; interarea, 137–39; for measurement of productivity, 383; multilateral place-to-place, 5; need for U.S. area, 167–69; for pharmaceutical industry productivity, 383–86, 413–14; using country-product-dummy regression to construct interarea, 178; using CPD method to construct place-to-place, 133. See also Pharmaceutical price indexes

Price levels: Brazilian interarea, 220–21; for ICP broad product groups in OECD countries, 457–59; for individual products and services in OECD countries, 459–63, 467–73t; international differences in service and goods, 463; link with wage dispersion of GDP levels, 456–57; measures in OECD countries for, 456; measures of pharmaceutical price inflation (1980–91), 383–87; using CPD method to estimate interarea, 216–21

Price regulation: forms in France, Italy, United Kingdom, Germany, United States, 373–75; in France and Italy, 374; of pharmaceuticals in United Kingdom, 374

Prices: alternative Brazilian price-level calculations, 220–25; Brazilian interarea levels, 214–20, 223–29; in ECP Group II countries, 241; granted by biased regulation, 376–77; multilateral price measurement, 129–33; relative prices in Brazil, Mexico, France, and United States, 285–87. See also Price indexes; Price levels

Productivity, manufacturing: comparison of East European prices and productivity, 333–40; industry-of-origin method compared to expenditure method, 331–33

Productivity, pharmaceutical industry: cross-national comparisons, 385, 387–400; price indexes for, 384–86; problems of measurement in pharmaceutical industry, 380–83

Purchasing power parity (PPP): defined, 279; derived for Brazil, Mexico, France, and United States, 279–80, 285–87, 297–310; Eurostat classification for medical and health care goods, 233–38. See also Unit value ratios (UVRs)

Quality adjustment: Brazil/United States, Mexico/United States transportation services, 323; hedonic regression for, 172–73, 199–203; for local area labor services, 178–79; road freight transportation, 323–24; Romanian and Moldavian markets, 267–68

Regulation: theory and measurement issues in

Representativity principle: of PPP classes of products, 233–34

Research and development (R&D), pharmaceutical industry, 383, 403, 405t

Scope's method, 25

Spanning trees: in chaining methods, 109–10; edge in, 110; function of, 110; minimum spanning tree (MST), 109–11, 117–19; shortest path (SP) method, 110–11, 113–16; star spanning tree, 110–11; string spanning tree, 110

Standard of living (SL): as current material well-being, 482, 494–98

Star spanning tree, 110–11, 117–19

Star systems: defined, 91; Fisher, 91

Technology: in embodiment hypothesis, 451; as factor in productivity gain, 451

Törnqvist multilateral (transitive) systems: of bilateral compensation index numbers, 177–78; of bilateral index numbers, 128–29

Trade theory: Heckscher-Ohlin (HO) model, 420; increasing internal returns to scale (IIRS), 420–21

Transitivity: across several aggregation levels, 131–33; adjustment of data to satisfy, 135–37; effect on drift, 141; making bilateral parities system transitive, 134–39; time series/cross-sectional, 141; of Törnqvist multilateral systems, 128–29, 177–78, 205. See also Circularity

Transportation services: comparisons of Brazilian, Mexican, French, and American, 287–310, 311–13t; quality adjustment in Brazil/United States and Mexico/United States, 323

Unit value ratios (UVRs): for manufacturing in four East European countries (1987–93), 334–35

Value added: double deflation in measurement of, 324; pharmaceutical industry (1970–90), 389–400

Wage dispersion: influence in OECD countries, 476–77; measures in OECD countries, 454–56; price levels for broad product groups in OECD countries, 457–60; price levels for individual products and services, in OECD countries, 459–63; trends in OECD countries, 476–77

Wage indexes: interarea differentials, 186–43

Well-being: concept of, 480–82, 500; concept of current material, 480–82, 494–95, 500; measurement of inequality of material well-being, 489–90; nonmaterial, 500

**Labor Statistics Measurement Issues**  
*Edited by John Haltiwanger, Marilyn E. Manser, and Robert Topel*

Rapidly changing technology, the globalization of markets, and the declining role of unions are just some of the factors that have led to dramatic changes in working conditions in the United States. While these changes have been studied, little attention has been paid to the difficult measurement problems underlying analysis of the labor market. *Labor Statistics Measurement Issues* helps to fill this gap by exploring key theoretical and practical issues in the measurement of employment, wages, and workplace practices.

Through a wide variety of rich data and an exceptional representation of scholars, this important and useful book will find a large audience among labor economists and consumers of labor statistics.  
NBER Studies in Income and Wealth, Volume 60

**Geography and Ownership as Bases for Economic Accounting**  
*Edited by Robert E. Baldwin, Robert E. Lipsey, and I. David Richardson*

*Geography and Ownership as Bases for Economic Accounting* provides a forum for leading specialists in trade and international economics to explore whether changes in the world economy have increased the usefulness of economic accounts drawn up on the basis of ownership rather than geography. The papers in this volume suggest that ownership-based accounts are helpful in understanding trade and financial transactions among globalized enterprises. Individual chapters emphasize this perspective through construction of alternate accounts, studies of individual countries, and studies of foreign direct investment and its relation to national economies.

*Geography and Ownership as Bases for Economic Accounting* gives trade and international economists the data and resources to renew discussion of this timely issue.
