

There are five (5) tables in the Hospital Compare database.

1) dbo\_vwHQL\_HOSP

Provider Number Hospital Name Address1 Address2 Address3 City State ZIP Code Phone Number Hospital Type Hospital Owner Accreditation Emergency Service
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

4) dbo\_vwHQL\_PCTL\_MSR\_XWLK

Measure Name Condition Percentile Score
--------------------------------------------------

2) dbo\_vwHQL\_HOSP\_MSR\_XWLK

Provider Number Hospital Name Condition Measure Name Score Sample Footnote
----------------------------------------------------------------------------------------------

5) dbo\_vwHQL\_FTNT

Footnote FootnoteText
--------------------------

3) dbo\_vwHQL\_STATE\_MSR\_AVG

State Condition Measure Name State Average
-----------------------------------------------------

The first table, dbo\_vwHQL\_HOSP, contains thirteen (13) fields. This table displays the hospital's demographic data.

1. Provider Number: text(6)  
Contains the provider number that corresponds to the hospital listed.
2. HospitalName: text(80)  
Contains the name of the hospital.
3. Address 1: text(60)

Contains the first line of the physical address that corresponds to the hospital listed.

4. Address 2: text(30)

Contains the second line of the physical address that corresponds to the hospital listed.

5. Address 3: text(30)

Contains the third line of the physical address that corresponds to the hospital listed.

6. City: text(30)

Contains the name of the city of the physical address that corresponds to the hospital listed.

7. State: text(2)

Contains the alphabetic postal code used to identify the state of the physical address that corresponds to the hospital listed.

8. ZIPCode: text(5)

Contains the full postal zip code of the physical address that corresponds to the hospital listed.

9. PhoneNumber: text(15)

Contains the phone number that corresponds to the hospital listed.

10. HospitalType: text(50)

Contains the type of facility that corresponds to the hospital listed.

11. HospitalOwner: text(100)

Contains the full type of ownership that corresponds to the hospital listed.

12. Accreditation: text(3)

Contains the accreditation status that corresponds to the hospital listed.

13. EmergencyService: text(3)

Contains the emergency service status that corresponds to the hospital listed.

The second table, `dbo_vwHQL_HOSP_MSR_XWLK`, contains seven (7) fields. This table contains the scores that were achieved by each hospital in each of the seventeen quality measures related to hospital performance.

1. Provider Number: text(6)

Contains the provider number that corresponds to the hospital listed.

2. Hospital Name: text(80)

Contains the name of the hospital.

3. Condition: text(255)  
Contains the name of the condition of the corresponding quality measure.
4. Measure Name: text(255)  
Contains the name of the quality measure.
5. Score: text(25)  
Contains the score that the hospital achieved for this quality measure. This value is expressed as a percentage of the sample size that was measured.
6. Sample: text(26)  
Contains the size of the data sample for this hospital and quality measure. This value is expressed as a sample size and a label indicating the units that were measured, such as "patients."
7. Footnote: text(10)  
Contains the numbers of footnotes that are associated with the hospital's score for this quality measure.

The third table, `dbo_vwHQI_STATE_MSR_AVG`, contains four (4) fields. This table displays the average score achieved by hospitals in each state in each of the seventeen quality measures related to hospital performance.

1. State: text(2)  
Contains the state abbreviation.
2. Measure Name: text(255)  
Contains the name of the quality measure.
3. Condition: text(255)  
Contains the name of the condition of the corresponding quality measure.
4. State Average: text(5)  
Contains the score achieved by the hospitals in the given state for the quality measure.

The fourth table, `dbo_vwHQI_PCTL_MSR_XWLK`, contains four (4) fields. This table displays the scores achieved by the Top 10% of hospitals, as well as the national average in each of the seventeen quality measures related to hospital performance.

1. Measure Name: text(255)  
Contains the name of the quality measure.
2. Condition: text(255)

Contains the name of the condition of the corresponding quality measure.

3. Percentile: text(255)

Contains the name of the percentile. The percentiles refer to either the Top 10% or Top 50% of hospitals that submitted data for the quality measure.

4. Score: text(25)

Contains the score achieved by the percentile group of hospitals for the quality measure.

The fifth table, `dbo_vwHQL_FTNT`, contains two (2) fields. This table displays text for the various footnotes that are associated with the hospital's score for this quality measure in the `dbo_vwHQL_HOSP_MSR_XWLK` table.

1. Footnote: text(5)

Contains the number of the footnote. These numbers are referenced in the Footnote column of the `dbo_vw_HQL_HOSP_MSR_XWLK` table.

2. FootnoteText: text(255)

Contains the text for this footnote.
