

Hospital Compare Downloadable Database

This functionality is primarily used by health policy researchers and the media. The data provided in the fifteen tables comes from the data that is displayed in the Hospital Compare Tool and includes additional information about the hospital ownership that is not displayed on the website. The date “Modified” in the zipped file indicates the date of the last refresh of the data. For information about hospitals in a particular geographical area, you should use the Hospital Compare tool instead of downloading the data.

Generally, the downloadable databases are refreshed within 24 hours after the data are refreshed on medicare.gov. The date “Modified” in the zipped file indicates the date of the last refresh of the downloadable database.

Table dbo_vwHQL_FTNT

The dbo_vwHQL_FTNT table contains two (2) fields. This table provides the footnote and footnote text.

1. Footnote:varchar (5)
2. Footnote Text:varchar (300)

Hospital Compare Footnote values:

Letters a through g are associated with the Medicare payment and volume data and h through i are associated with Outcome of Care measures data.

ID Footnote Text

- a. Source: Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey.
- b. This is the middle range of payments for the most typical cases treated in this geographic area for this condition or procedure.
- c. Number of Medicare Patients Treated: The number of discharges the hospital treated for each MS-DRG from October 2007 through September 2008. The United States and average of Medicare Patients does not include hospitals with zero cases.
- d. The payment and volume information is for acute care hospitals. Critical access hospitals (CAH) are not included because they are paid using another method.
- e. Payment cannot be computed as there were no Medicare discharges for this MS-DRG from October 2007 – September 2008.

Hospital Compare Downloadable Database

- f. An asterisk (*) appears in the table where data cannot be disclosed to protect personal health information due to the small number of Medicare patients (fewer than 11).
- g. This hospital is currently not submitting data for Hospital Process of Care Measures, Hospital Outcome of Care Measures and/or the Hospital Consumer Assessment of Health Providers and Systems (HCAHPS) Patient Survey.
- h. This column shows the number of patients with Original Medicare who were admitted to the hospital for heart attack, heart failure or pneumonia conditions. The hospital may also have treated additional Medicare patients in Medicare health plans (like an HMO or PPO).
- i. The number of cases is too small (fewer than 25) to reliably tell how well the hospital is performing.

The number footnotes (in italics) are associated with the Hospital Compare quality measures:

ID Footnote Text

1. *The number of cases is too small (<25) to reliably tell how well a hospital is performing.*
For each measure, the rate is the percent of patients for whom the treatment is appropriate. Where these numbers are small (fewer than 25 patients), the calculated rate may not accurately predict the hospital's future performance. As the quality data base is expanded to a full rolling four quarters of data for each measure, the number of cases used to determine hospitals' rates will likely increase, thereby increasing the reliability and stability of the rates. Note: This footnote does not necessarily reflect hospital size or overall patient volume..
2. *The hospital indicated that the data submitted for this measure were based on a sample of cases..*
A rate may be based upon the total number of cases treated by a hospital, or for a facility with a large caseload, a rate may be based on a random sample of the cases the hospital treated. This footnote indicates that a hospital chose to submit data for a sample of its total cases (following specific rules for how to select the cases).
3. *Data was collected during a shorter time period (fewer quarters) than the maximum possible time for this measure (One quarter equals three months..)*
Each rate reflects the care given over a specific time period, up to a maximum of four quarters during a 12 month period. The number of quarters of data available is determined by when hospitals first began to report data using a specific measure. For example, for the ten measures in the "Starter Set", the maximum number of quarters for which a hospital could have provided data is four quarters. For measures added more recently, the maximum will be fewer than four quarters. This footnote indicates that the hospital's rate was based on data from fewer than the maximum possible number of quarters that the measure was generally collected.
4. *Inaccurate information submitted and suppressed for one or more quarters.*
Hospitals are required to submit accurate, reportable data to the Centers for Medicare and Medicaid Services (CMS). The rates for these measures were calculated by excluding data that had been suppressed for one or more quarters because they were identified as inaccurate.
5. *No data is available from the hospital for this measure.*
Hospitals volunteer to provide data for reporting on Hospital Compare. This footnote is applied when the hospital did not submit any cases for a measure or if they suppressed their data from public reporting

Hospital Compare Downloadable Database

6. *Fewer than 100 patients completed the HCAHPS survey. Use these rates with caution, as the number of surveys may be too low to reliably assess hospital performance.*
The number of completed surveys the hospital or its vendor provided to CMS is less than 100.
7. *Survey results are based on less than 12 months of survey data.*
This footnote is applied when HCAHPS results are based on less than 12 months of survey data.
8. *Survey results are not available for this period.*
This footnote is applied when a hospital did not participate in HCAHPS, did not collect sufficient HCAHPS data for public reporting purposes, or chose to suppress their HCAHPS results.
9. *No patients were eligible for the HCAHPS Survey.*
This footnote is applied when a hospital has no patients eligible to participate in the HCAHPS survey.
10. *A state average was not calculated because too few hospitals in the state submitted data.*
This footnote is applied when too few hospitals submitted data.
11. *There were discrepancies in the data collection process.*
This footnote is applied when there have been deviations from HCAHPS data collection protocols. CMS is working with survey vendors and/or hospitals to correct this situation.

† "0 patients" The notation "0 patients" is applied when no patients met the criteria for inclusion in that particular measure's calculation.
