Introduction

Hospital Compare is a consumer-oriented website that provides information on the quality of care hospitals are providing to their patients. This information can help consumers make informed decisions about health care. Hospital Compare allows consumers to select multiple hospitals and directly compare performance measure information related to heart attack, heart failure, pneumonia, surgery, and other conditions. The Centers for Medicare & Medicaid Services (CMS) created the Hospital Compare website to better inform health care consumers about a hospital's quality of care. Hospital Compare provides data on over 4,000 Medicare-certified hospitals, including acute care hospitals, critical access hospitals (CAHs), children's hospitals, , and hospital outpatient departments. Hospital Compare is part of an Administration-wide effort to increase the availability and accessibility of information on quality, utilization and costs for effective, informed decision-making. More information about Hospital Compare can be found by visiting the CMS.gov website and performing a search for Hospital Compare. To access the Hospital Compare website, please visit www.medicare.gov/hospitalcompare.

Hospital Compare is typically updated, or refreshed, each quarter in April, July, October, and December, however, the refresh schedule is subject to change and not all measures will update during each quarterly release. See the [Measure Descriptions and Reporting Cycles section](#) of this Data Dictionary for additional information. Hospital Compare data are reported in median time only, however, the median time is often referred to as the “average time” to allow for ease of understanding across a wider audience.

Links to download the data from the Downloadable Databases in Microsoft Access and zipped comma-separated value (CSV) flat file formats can be found toward the top of the [Official Hospital Compare Data](#) website. A catalogue of datasets is also available toward the bottom of the website where files can be viewed and exported within a web browser. Datasets can be exported in a variety of formats and a [Data.Medicare.gov: Get Started!](#) video tutorial is available to assist with exporting the data. Embedded datasets for certain measures can also be found within the Hospital Compare website. Archived data from 2005 - 2016 is available in the [Official Hospital Compare Data Archive](#).

All Hospital Compare websites are publically accessible. As works of the U.S. government, Hospital Compare data are in the public domain and permission is not required to reuse them. An attribution to the agency as the source is appreciated. Your materials, however, should not give the false impression of government endorsement of your commercial products or services.

Document Purpose

The purpose of this document is to provide a directory of material for use in the navigation of information contained within the Hospital Compare downloadable databases. The [Appendix A – Hospital Compare Measures](#) section in this data dictionary provides a full list of Hospital Compare measures contained in the downloadable databases and the [Measure Dates](#) section of this data dictionary provides additional information about measure dates and quarters. This information can also be found on the Hospital Compare website under [Measures and current data collection periods](#) and is organized as follows:

- General information (overall rating, demonstrating meaningful use, structural measures, and health information technology [IT])
- Survey of patients' experiences – (Hospital Consumer Assessment of Healthcare Providers and Systems survey [HCAHPS])
- Timely and effective care (Colonscopy follow-up, Acute myocardial infarction [AMI], Heart failure [HF], Pneumonia [PN], Surgical Care Improvement Project [SCIP], Emergency Department [ED] throughput, Preventive care, Children's asthma care [CAC], Stroke care, Blood clot prevention & treatment, and Pregnancy & delivery care)
- Complications (Surgical complications, Agency for Healthcare Research and Quality [AHRQ] Patient Safety Indicators [PSIs], and Healthcare-associated infections [HAIs])
- Readmissions and deaths (30-day rates of readmission and 30-day death [mortality] rates)
- Use of medical imaging (Outpatient imaging efficiency)
- Payment and value of care (Medicare spending per beneficiary [MSPB], payment for heart attack, heart failure, and pneumonia patients, and value of care for heart attack, heart failure, and pneumonia patients)

The [Spotlight](#) section of Hospital Compare provides links to data for the following quality reporting programs:

- Acute care Veterans Administration hospital data (VA)
- PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program
- Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program
- American College of Surgeons (ACS) National Surgical Quality Improvement Program (NSQIP®)
- Ambulatory Surgical Center Quality Reporting (ASCQR) Program

The [Additional Information](#) section of Hospital Compare provides links to data for the following payment programs:

- Hospital Value-Based Purchasing Program(HVBP)
 - HVBP Program Data and Scoring (Efficiency)
 - HVBP Program Incentive Payment Adjustments
- Hospital Readmissions Reduction Program (HRRP)
- Hospital-Acquired Conditions Reduction Program (HACRP)

Acronym Index

The following acronyms are used within this data dictionary and in the corresponding downloadable databases (Access and CSV flat files – Revised):

Acronym	Meaning
ASC	Ambulatory Surgical Center
ASCQR	Ambulatory Surgical Center Quality Reporting
AMI	Acute Myocardial Infarction
AVG	Average
CABG	Coronary Artery Bypass Graft
CAC	Children’s Asthma Care
CAUTI	Catheter-associated urinary tract infections
CLABSI	Central line-associated bloodstream infections
COMP	Complications
COPD	Chronic Obstructive Pulmonary Disease
ED	Emergency Department
FTNT	Footnote
HACRP	Hospital-Acquired Conditions Reduction Program
HAI	Healthcare-Associated Infections
HBIPS	Hospital-Based Inpatient Psychiatric Services
HCAHPS	Hospital Consumer Assessment of Healthcare Providers and Systems
HF	Heart Failure
HIP-KNEE	Total Hip/Knee Arthroplasty
HIT	Health Information Technology
HRRP	Hospital Readmissions Reduction Program
HVBP	Hospital Value-Based Purchasing
IMG	Imaging
IMM	Immunization
IPFQR	Inpatient Psychiatric Facility Quality Reporting
IQR	Inpatient Quality Reporting
MORT	Mortality
MSPB	Medicare Spending per Beneficiary (also referred to as SPP for Spending Per Patient)
MSR	Measure
MPV	Medicare Payment and Volume
NQF	National Quality Forum
OIE	Outpatient Imaging Efficiency
OP	Outpatient
OQR	Outpatient Quality Reporting
PCHQR	PPS-Exempt Cancer Hospital Quality Reporting
PN	Pneumonia
PSI	Patient Safety Indicators
READM	Readmissions
SCIP	Surgical Care Improvement Project
SM	Structural Measures
SPP	Spending per Patient (also referred to as MSPB for Medicare Spending per Beneficiary)
STK	Stroke
TPS	Total Performance Score
VTE	Venous Thromboembolism

Measure Descriptions and Reporting Cycles

Data for each measure set is collected in differing timeframes from various quality measurement contractors. Additional information about the measure update frequency/refresh schedule and data collection periods can be found in the [Measures and Current Data Collection Periods](#) section of the Hospital Compare website. Below is a brief description of the collection process and reporting cycles for each measure set included on Hospital Compare:

Name	General Information: Overall Rating
Description/ Background	The hospital overall ratings are designed to assist patients, consumers, and others in comparing hospitals side-by-side. The hospital overall ratings show the quality of care a hospital may provide compared to other hospitals based on the quality measures reported on Hospital Compare. The hospital overall ratings summarize more than 60 measures reported on Hospital Compare into a single rating. The measures come from the IQR, OQR, and other programs and encompass measures in seven measure groups: mortality, safety of care, readmission, patient experience, effectiveness of care, timeliness of care, and efficient use of medical imaging. The hospitals can receive between one and five stars, with five stars being the highest ranking, and the more stars, the better the hospital performs on the quality measures. Most hospitals will display a three star rating.
Reporting Cycle	Data collection period will vary by measure, and will be updated quarterly.

Name	General Information: Structural Measures
Description/ Background	As part of the general information available through CMS, structural measures reflect the environment in which providers care for patients. Examples of structural measures can be inpatient (participation in general surgery registry) or outpatient (tracking clinical results between visits). Hospitals submit structural measure data using an online data entry tool made available to hospitals and their vendors. Structural measures include information provided by the American College of Surgeons (ACS), the Society of Thoracic Surgeons (STS), the Joint Commission (TJC), and CMS.
Reporting Cycle	Collection period: 12 months. Refreshed annually, except the ACS Registry which is refreshed quarterly.

Name	General Information: Health Information Technology (HIT) Measures
Description/ Background	As part of the general information available through CMS, hospitals submit HIT measure data which is part of the Electronic Health Record (EHR) Incentive Program. The HIT measures include hospitals' ability to receive lab results electronically and track patients' health information, including lab results, tests, and referrals electronically between visits. The data for hospitals who are using certified electronic health record technology to meet the requirements of meaningful use is available in the downloadable database files.
Reporting Cycle	Collection period: 12 months. Refreshed annually.

Name	Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Patient Survey
Description/ Background	The HCAHPS Patient Survey, also known as the CAHPS [®] Hospital Survey or Hospital CAHPS, is a survey instrument and data collection methodology for measuring patients' perceptions of their hospital experience. The survey is administered to a random sample of adult inpatients after discharge. The HCAHPS survey contains patient perspectives on care and patient rating items that encompass key topics: communication with hospital staff, responsiveness of hospital staff, pain management, communication about medicines, discharge information, cleanliness of hospital environment, quietness of hospital environment, and transition of care. The survey also includes screening questions and demographic items, which are used for adjusting the mix of patients across hospitals and for analytic purposes. See the Appendix B – HCAHPS Survey Questions Listing section for a full list of current HCAHPS Survey items included in the Hospital Compare downloadable databases. More information about the HCAHPS Survey, including a complete list of survey questions, can be found on the official HCAHPS website .
Reporting Cycle	Collection period: 12 months. Refreshed quarterly.

Name	Timely and Effective Care: Process of Care Measures
Description/ Background	The measures of timely and effective care (also known as "process of care" measures) show the percentage of hospital patients who got treatments known to get the best results for certain common, serious medical conditions or surgical procedures; how quickly hospitals treat patients who come to the hospital with certain medical emergencies; and how well hospitals provide preventive services. These measures only apply to patients for whom the recommended treatment would be appropriate. The measures of timely and effective

	<p>care apply to adults and children treated at hospitals paid under the Inpatient Prospective Payment System (IPPS) or the Outpatient Prospective Payment System (OPPS), as well as those that voluntarily report data on measures for whom the recommended treatments would be appropriate including: Medicare patients, Medicare managed care patients, and non-Medicare patients. Timely and effective care measures are also referred to as process of care measures and include colonoscopy follow-up, acute myocardial infarction, heart failure, pneumonia, Surgical Care Improvement Project (SCIP), emergency department, preventive care, children's asthma care, stroke care, blood clot prevention and treatment, and pregnancy and delivery care measures.</p> <p>IMM-3 and OP-27 are combined and reported as one measure rather than listing the measures separately. The Measure ID IMM-3_OP-27 includes data from both the inpatient measure IMM-3, and the outpatient measure OP-27.</p>
Reporting Cycle	Collection period: Approximately 12 months. Refreshed quarterly, except EDV-1, OP-22, OP-29, OP-30, IMM-2, and IMM-3 which are refreshed annually.

Name	Complications: Surgical Complications – Hip/Knee Measure
Description/ Background	<p>The hip/knee complication rate is an estimate of complications within an applicable time period, for patients electively admitted for primary total hip and/or knee replacement. CMS measures the likelihood that at least 1 of 8 complications occurs within a specified time period: heart attack, (acute myocardial infarction [AMI]), pneumonia, or sepsis/septicemia/shock during the index admission or within 7 days of admission, surgical site bleeding, pulmonary embolism, or death during the index admission or within 30 days of admission, or mechanical complications or periprosthetic joint infection/wound infection during the index admission or within 90 days of admission. Hospitals' rates of hip/knee complications are compared to the national rate to determine if hospitals' performance on this measure is better than the national rate (lower), no different than the national rate, or worse than the national rate (higher). Rates are provided in the downloadable databases as decimals and typically indicate information that is presented on the Hospital Compare website as percentages. Lower rates for surgical complications are better. CMS chose to measure these complications within the specified times because complications over a longer period may be impacted by factors outside the hospitals' control like other complicating illnesses, patients' own behavior, or care provided to patients after discharge. This measure is separate from the serious complications measure (also reported on Hospital Compare).</p>
Reporting Cycle	Collection period: 36 months. Refreshed annually.

Name	Complications: Surgical Complications – AHRQ Patient Safety Indicators (PSIs)
Description/ Background	<p>Measures of serious complications are drawn from the Agency for Healthcare Research and Quality (AHRQ) Patient Safety Indicators (PSIs). The overall score for serious complications is based on how often adult patients had certain serious, but potentially preventable, complications related to medical or surgical inpatient hospital care. The AHRQ PSIs reflect quality of care for hospitalized adults and focus on potentially avoidable complications and iatrogenic events. AHRQ PSIs only apply to Medicare beneficiaries who were discharged from a hospital paid through the IPPS. These indicators are risk adjusted to account for differences in hospital patients' characteristics. CMS calculates rates for AHRQ PSIs using Medicare claims data and a statistical model that determines the interval estimates for the PSIs. CMS publicly reports data on two PSIs—PSI-4 (death rate among surgical patients with serious treatable complications) and the composite measure PSI-90. PSI-90 is composed of 11 NQF-endorsed measures, including PSI-3 (pressure ulcer rate), PSI-6 (iatrogenic pneumothorax rate), PSI-7 (central venous catheter-related blood stream infection rate), PSI-8 (postoperative hip fracture rate), PSI-9 (postoperative hemorrhage or hematoma rate), PSI-10 (postoperative physiologic and metabolic derangement rate), PSI-11 (postoperative respiratory failure rate), PSI-12 (postoperative pulmonary embolism or deep vein thrombosis rate), PSI-13 (postoperative sepsis rate), PSI-14 (postoperative wound dehiscence rate), and PSI-15 (accidental puncture or laceration rate). PSI-90's composite rate is the weighted average of its component indicators. Hospitals' PSI rates are compared to the national rate to determine if hospitals' performance on PSIs is better than the national rate (lower), no different than the national rate, or worse than the national rate (higher).</p>
Reporting Cycle	Collection period: 24 months. Refreshed annually.

Name	Complications: Healthcare-Associated Infections (HAI) Measures
Description/ Background	<p>To receive payment from CMS, hospitals are required to report data about some infections to the Centers for Disease Control and Prevention's (CDC's) National Healthcare Safety Network (NHSN). The HAI measures show how often patients in a particular hospital contract certain infections during the course of their medical treatment, when compared to like hospitals. HAI measures provide information on infections that occur while the patient is in the hospital and include: central line-associated bloodstream infections (CLABSI), catheter-associated urinary tract infections (CAUTI), surgical site infection (SSI) from colon surgery or abdominal hysterectomy, methicillin-resistant <i>Staphylococcus Aureus</i> (MRSA) blood laboratory-identified events (bloodstream infections), and <i>Clostridium difficile</i> (<i>C.diff.</i>) laboratory-identified events (intestinal infections). The HAI measures show how often patients in a particular hospital contract certain infections during the course of their medical treatment, when compared to like hospitals. The CDC calculates a Standardized Infection Ratio (SIR) which may take into account the type of patient care location, number of patients with an existing infection, laboratory methods, hospital affiliation with a medical school, bed size of the hospital, patient age, and classification of patient health. SIRs are calculated for the hospital, the state, and the nation. Hospitals' SIRs are compared to the national benchmark to determine if hospitals' performance on these measures is better than the national benchmark (lower), no different than the national benchmark, or worse than the national benchmark (higher). The HAI measures apply to all patients treated in acute care hospitals, including adult, pediatric, neonatal, Medicare, and non-Medicare patients.</p> <p>The new HAI-1 measure tracks central-line associated bloodstream infections (CLABSI) in ICUs and select wards. The HAI-1a measure tracks central-line associated bloodstream infections (CLABSI) in ICUs. The HAI-1 measure will be phased in over the next year to replace the HAI-1a measure.</p> <p>The new HAI-2 measure tracks catheter-associated urinary tract infections (CAUTI) in ICUs and select wards. The HAI-1a measure only tracks catheter-associated urinary tract infections (CAUTI) in ICUs. The HAI-2 measure will be phased in over the next year to replace the HAI-2a measure.</p>
Reporting Cycle	Collection period: 12 months. Refreshed quarterly.

Name	Readmissions and Deaths: 30-Day Readmission and Death Measures
Description/ Background	<p>The 30-day unplanned readmission measures are estimates of unplanned readmission to any acute care hospital within 30 days of discharge from a hospitalization for any cause related to medical conditions, including heart attack (AMI), heart failure (HF), pneumonia (PN), chronic obstructive pulmonary disease (COPD), and stroke (STK); and surgical procedures, including hip/knee replacement and coronary artery bypass graft (CABG). The 30-day unplanned hospital-wide readmission measure focuses on whether patients who were discharged from a hospitalization were hospitalized again within 30 days. The hospital-wide readmission measure includes all medical, surgical and gynecological, neurological, cardiovascular, and cardiorespiratory patients. The 30-day death measures are estimates of deaths within 30-days of a hospital admission from any cause related to medical conditions, including heart attack, heart failure, pneumonia, COPD, and stroke; and surgical procedures, including CABG. Hospitals' rates are compared to the national rate to determine if hospitals' performance on these measures is better than the national rate (lower), no different than the national rate, or worse than the national rate (higher). For some hospitals, the number of cases is too small to reliably compare their results to the national average rate. CMS chose to measure death within 30 days instead of inpatient deaths to use a more consistent measurement time window because length of hospital stay varies across patients and hospitals. Rates are provided in the downloadable databases as decimals and typically indicate information that is presented on the Hospital Compare website as percentages. Lower percentages for readmission and mortality are better.</p>
Reporting Cycle	Collection period: 36 months for all measures, except 12 months for READM-30-HOSP-WIDE. Refreshed annually.

Name	Use of Medical Imaging: Outpatient Imaging Efficiency (OIE)
Description/ Background	CMS has adopted six measures which capture the quality of outpatient care in the area of imaging. CMS notes that the purpose of these measures is to promote high-quality efficient care. Each of the measures currently utilize both the Hospital OPPS claims and Physician Part B claims in the calculations. These calculations are based on the administrative claims of the Medicare fee-for-service population. Hospitals do not submit additional data for these measures. The measures on the use of medical imaging show how often a hospital provides specific imaging tests for Medicare beneficiaries under circumstances where they may not be medically appropriate. Lower percentages suggest more efficient use of medical imaging. The purpose of reporting these measures is to reduce unnecessary exposure to contrast materials and/or radiation, to ensure adherence to evidence-based medicine and practice guidelines, and to prevent wasteful use of Medicare resources. The measures only apply to Medicare patients treated in hospital outpatient departments.
Reporting Cycle	Collection period: 12 months. Refreshed annually.

Name	Payment and Value of Care Measures
Description/ Background	<p>The Medicare Spending Per Beneficiary (MSPB-1) Measure assesses Medicare Part A and Part B payments for services provided to a Medicare beneficiary during a spending-per-beneficiary episode that spans from three days prior to an inpatient hospital admission through 30 days after discharge. The payments included in this measure are price-standardized and risk-adjusted.</p> <p>The payment measures for heart attack, heart failure, and pneumonia include the payments made for Medicare beneficiaries who are 65 years and older. The measures add up payments made for care and supplies starting the day the patient enters the hospital and for the next 30 days. The measures are meant to reflect differences in the services and supplies provided to patients.</p> <p>Hospital results are provided in the downloadable databases for the heart attack, heart failure, and pneumonia payment measures. You can see whether the payments made for patients treated at a particular hospital is less than, no different than, or greater than the national average payment. For some hospitals, the number of cases is too small to reliably compare their results to the national average payment.</p>
Reporting Cycle	Collection Period: 12 months for MSPB-1 and 36 months for the payment for heart attack (PAYM-30-AMI), heart failure (PAYM-30-HF), and pneumonia (PAYM-30-PN) measures. All measures refreshed annually.

Name	Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program
Description/ Background	The IPFQR Program is a pay-for-reporting program intended to provide consumers with quality of care information to make more informed decisions about health care options. To meet the IPFQR Program requirements, Inpatient Psychiatric Facilities (IPFs) are required to submit all quality measures to CMS. The IPFQR Program measures allow consumers to find and compare the quality of care given at psychiatric facilities where patients are admitted as inpatients. Inpatient psychiatric facilities are required to report data on these measures. Facilities that are eligible for this program may have their Medicare payments reduced if they do not report.
Reporting Cycle	Collection period: 12 months. Refreshed annually.

Name	Prospective Payment System (PPS)-Exempt Cancer Hospital Quality Reporting (PCHQR) Program
Description/ Background	The PPS-Exempt Cancer Hospital Quality Reporting Program measures allow consumers to find and compare the quality of care provided at the eleven PPS-exempt cancer hospitals participating in the program. Under the PCHQR Program, cancer hospitals submit data to CMS regarding the Adjuvant Chemotherapy Colon Cancer (PCH-1), Combination Chemotherapy Breast Cancer (PCH-2), and Adjuvant Hormone Therapy Breast Cancer (PCH-3) measures.
Reporting Cycle	Collection period: 12 months. Refreshed quarterly.

Name	Ambulatory Surgical Center Quality Reporting (ASCQR) Program
Description/ Background	The Ambulatory Surgical Center Quality Reporting (ASCQR) Program is a quality measure data reporting program implemented by the Centers for Medicare & Medicaid Services (CMS) for care provided in the ambulatory surgical center (ASC) setting. ASCs are health care facilities that perform surgeries and procedures outside the hospital setting. The ASCQR Program exists to promote higher quality, more efficient health care for Medicare beneficiaries through data reporting, quality improvement, and measure alignment with other clinical care settings. To participate in the program, an ASC must submit quality measure data. Once an ASC submits quality measure data under the ASCQR Program for any of the ASCQR measures, the ASC is considered to be participating in the program. ASCs that participate in the program and meet program requirements are rewarded based on the quality of care that they provide to patients. The program operates by (1) awarding ASCs that meet program requirements with an annual payment, and (2) reducing the annual payment by two percent for ASCs that do not participate in the program, or fail to meet program requirements for the ten ASC measures.
Reporting Cycle	Collection period: 6 months (ASC-8); 12 months (ASC-6, -7, -9 & -10); 24 months (ASC-1, -2, -3, -4, & -5). Refreshed annually.

Name	Linking Quality to Payment: Hospital-Acquired Conditions Reduction Program (HACRP)
Description/ Background	The Hospital-Acquired Condition Reduction Program (HACRP) was established in 2010 to provide an incentive for hospitals to reduce HACs. CMS adopted the AHRQ PSI-90 composite measure, the CDC NHSN central line-associated blood stream infection (CLABSI) measure, the CDC NHSN catheter-associated urinary tract infection (CAUTI) measure, and the Surgical Site Infection (SSI) (colon and hysterectomy) measure as part of HACRP. The overall score for serious complication is based on how adult patients who had certain serious, but potentially preventable, complications related to medical or surgical inpatient hospital care scored on the individual measures.
Reporting Cycle	Collection Period: 24 months. Refreshed Annually.

Name	Linking Quality to Payment: Hospital Readmissions Reduction Program (HRRP)
Description/ Background	In October 2012, CMS began reducing Medicare payments for IPPS hospitals with excess readmissions. Excess readmissions are measured using a ratio, by dividing a hospital's number of "predicted" 30-day readmissions for AMI, HF, PN, hip/knee replacement, and COPD by the number that would be "expected," based on an average hospital with similar patients. A ratio greater than one indicates excess readmissions. The calculations include only acute care hospitals paid under IPPS and Maryland hospitals.
Reporting Cycle	Collection period: 36 months. Refreshed annually.

Name	Linking Quality to Payment: Hospital Value-Based Purchasing (HVBP) Program
Description/ Background	The HVBP program is part of CMS' long-standing effort to link Medicare's payment system to quality. The program implements value-based purchasing to the payment system that accounts for the largest share of Medicare spending, affecting payment for inpatient stays in over 3,500 hospitals across the country. Hospitals are paid for inpatient acute care services based on the quality of care, not just quantity of the services they provide. The Fiscal Year 2016 HVBP program adjusts hospitals' payments based on their performance on four domains that reflect hospital quality: the Clinical Process of Care domain, the Patient Experience of Care domain, the Outcome domain, and the Efficiency domain. The Total Performance Score (TPS) is comprised of the Clinical Process of Care domain score (weighted as 10% of the TPS), the Patient Experience of Care domain score (weighted as 25% of the TPS), the Outcome domain score (weighted as 40% of the TPS), and the Efficiency domain score (weighted as 25% of the TPS).
Reporting Cycle	Collection period: 12 months for Clinical Process of Care, Patient Experience of Care, Efficiency, and Outcome (HAI) domain measures and 21 months for Outcome (Mortality and AHRQ) domain measures. Refreshed annually.

Name	Linking Quality to Payment: HVBP Payment Adjustments
Description/ Background	The Inpatient HVBP Program adjusts Medicare's payments to reward hospitals based on the quality of care that they provide to patients. The program operates by 1) reducing participating hospitals' Medicare payments by a specified percentage, then 2) using the estimated total amount of those payment reductions to fund value-based incentive payments to hospitals based on their performance under the program.
Reporting Cycle	Collection period: Approximately 12 months. Refreshed annually.

Measure Dates

The downloadable databases are refreshed within 24 hours of the Hospital Compare data update and this update will be indicated in the [Additional Information](#) section of the Hospital Compare home page. The Measure Dates file located within the downloadable databases contains a comprehensive listing of all measures displayed on Hospital Compare, their start quarters and dates, and their end quarters and dates. A sample of the collection periods from the October 2016 Measure Dates file is shown below:

Measure_ID	Measure_Start_Quarter	Measure_Start_Date	Measure_End_Quarter	Measure_End_Date
ACS_REGISTRY	2Q2014	4/1/2014	1Q2015	3/31/2015

Downloadable Database Content Summary

Access Note: Fields having the data type of “Memo” do not require a length. They allow the user to input large amounts of text without limit. Fields having the data type of “Char” require the corresponding length provided.

CSV Flat Files Note: Opening CSV files in Excel will remove leading zeroes from data fields. Since some data, such as provider numbers, contain leading zeroes, it is recommended that you open CSV files using text editor programs such as Notepad to copy or view CSV file content. Fields having the data type of “Memo” do not require a length. They allow the user to input large amounts of text without limit. Fields having the data type of “Char” require the corresponding length provided. The CSV column names and file names should mirror the datasets found on Data.Medicare.gov.

General Information

Table (Back to File Summary)	Measure Dates

Appendix A – Hospital Compare Measures

The following crosswalk contains a listing of all measures located at the hospital-level files of the Downloadable Databases (Access and CSV Flat Files – Revised). The tables below display the locations of each measure within the corresponding Access tables and CSV files, including an HVBP file directory:

Access	HQI_HOSP_STRUCTURAL
CSV	Structural Measures – Hospital.csv
Measure ID	Measure Name
SM_PART_CARD	Cardiac surgery registry (alternate Measure ID: SM-1)
SM_PART_NURSE	Nursing care registry (alternate Measure ID: SM-3)
SM_PART_GEN_SURG	General Surgery Registry (alternate Measure ID: SM-4)
SM_SS_CHECK	Uses Inpatient Safe Surgery Checklist (alternate Measure ID SM-5)
ACS_REGISTRY	Multispecialty Surgical Registry
OP-12	Able to receive lab results electronically (HIT measure)
OP-17	Able to track patients' lab results, tests, and referrals electronically between visits (HIT measure)
OP-25	Uses outpatient safe surgery checklist

Access	HQI_HOSP
CSV	Hospital General Information.csv
Measure ID	Measure Name
Meets criteria for meaningful use of EHRs	Meets criteria for meaningful use of EHRs
Hospital Overall Rating	Overall rating
Mortality national comparison	Mortality
Safety of care national comparison	Safety of Care
Readmission national comparison	Readmission
Patient experience national comparison	Patient Experience
Effectiveness of care national comparison	Effectiveness of Care
Timeliness of care national comparison	Timeliness of Care
Efficient use of medical imaging national comparison	Effective use of Medical Imaging

Access	HQI_HOSP_HCAHPS
CSV	HCAHPS –Hospital.csv
Measure ID	Measure Name
H-CLEAN-HSP-A-P	Patients who reported that their room and bathroom were "Always" clean
H-CLEAN-HSP-SN-P	Patients who reported that their room and bathroom were "Sometimes" or "Never" clean
H-CLEAN-HSP-U-P	Patients who reported that their room and bathroom were "Usually" clean
H-CLEAN-HSP-STAR-RATING	Cleanliness - star rating
H_CLEAN_LINEAR_SCORE	Cleanliness - linear mean score

H-COMP-1-A-P	Patients who reported that their nurses "Always" communicated well
H-COMP-1-SN-P	Patients who reported that their nurses "Sometimes" or "Never" communicated well
H-COMP-1-U-P	Patients who reported that their nurses "Usually" communicated well
H-COMP-1-STAR-RATING	Nurse communication - star rating
H_COMP_1_LINEA R_SCORE	Nurse communication - linear mean score
H-COMP-2-A-P	Patients who reported that their doctors "Always" communicated well
H-COMP-2-SN-P	Patients who reported that their doctors "Sometimes" or "Never" communicated well
H-COMP-2-U-P	Patients who reported that their doctors "Usually" communicated well
H-COMP-2-STAR-RATING	Doctor communication - star rating
H_COMP_2_LINEA R_SCORE	Doctor communication - linear mean score
H-COMP-3-A-P	Patients who reported that they "Always" received help as soon as they wanted
H-COMP-3-SN-P	Patients who reported that they "Sometimes" or "Never" received help as soon as they wanted
H-COMP-3-U-P	Patients who reported that they "Usually" received help as soon as they wanted
H-COMP-3-STAR-RATING	Staff responsiveness - star rating
H_COMP_3_LINEA R_SCORE	Staff responsiveness - linear mean score
H-COMP-4-A-P	Patients who reported that their pain was "Always" well controlled
H-COMP-4-SN-P	Patients who reported that their pain was "Sometimes" or "Never" well controlled
H-COMP-4-U-P	Patients who reported that their pain was "Usually" well controlled
H-COMP-4-STAR-RATING	Pain management - star rating
H_COMP_4_LINEA R_SCORE	Pain management - linear mean score
H-COMP-5-A-P	Patients who reported that staff "Always" explained about medicines before giving it to them
H-COMP-5-SN-P	Patients who reported that staff "Sometimes" or "Never" explained about medicines before giving it to them
H-COMP-5-U-P	Patients who reported that staff "Usually" explained about medicines before giving it to them
H-COMP-5-STAR-RATING	Communication about medicine - star rating
H_COMP_5_LINEA R_SCORE	Communication about medicines - linear mean score
H-COMP-6-N-P	Patients who reported that NO, they were not given information about what to do during their recovery at home
H-COMP-6-Y-P	Patients who reported that YES, they were given information about what to do during their recovery at home
H-COMP-6-STAR-RATING	Discharge information - star rating
H_COMP_6_LINEA R_SCORE	Discharge information - linear mean score
H-COMP-7-A	Patients who "Agree" they understood their care when they left the hospital
H-COMP-7-D-SD	Patients who "Disagree" or "Strongly Disagree" that they understood their care when they left the hospital
H-COMP-7-SA	Patients who "Strongly Agree" that they understood their care when they left the hospital
H-COMP-7-STAR-RATING	Care transition - star rating
H_COMP_7_LINEA R_SCORE	Care transition - linear mean score
H-HSP-RATING-0-6	Patients who gave their hospital a rating of 6 or lower on a scale from 0 (lowest) to 10 (highest)
H-HSP-RATING-7-8	Patients who gave their hospital a rating of 7 or 8 on a scale from 0 (lowest) to 10 (highest)
H-HSP-RATING-9-10	Patients who gave their hospital a rating of 9 or 10 on a scale from 0 (lowest) to 10 (highest)

H-HSP-RATING-STAR-RATING	Overall rating of hospital - star rating
H_HSP_RATING_LI NEAR_SCORE	Overall hospital rating - linear mean score
H-QUIET-HSP-A-P	Patients who reported that the area around their room was "Always" quiet at night
H-QUIET-HSP-SN-P	Patients who reported that the area around their room was "Sometimes" or "Never" quiet at night
H-QUIET-HSP-U-P	Patients who reported that the area around their room was "Usually" quiet at night
H-QUIET-HSP-STAR-RATING	Quietness - star rating
H_QUIET_LINEAR_SCORE	Quietness - linear mean score
H-RECMND-DN	Patients who reported NO, they would probably not or definitely not recommend the hospital
H-RECMND-DY	Patients who reported YES, they would definitely recommend the hospital
H-RECMND-PY	Patients who reported YES, they would probably recommend the hospital
H-RECMND-STAR-RATING	Recommend hospital - star rating
H_RECMND_LINEAR_SCORE	Recommend hospital - linear mean score
H-STAR-RATING	Summary star rating

CSV	Timely and Effective Care – Hospital.csv
Measure ID	Measure Name
AMI-7a	Fibrinolytic Therapy Received Within 30 Minutes of Hospital Arrival *This measure is displayed on Hospital Compare as “Heart attack patients given drugs to break up blood clots within 30 minutes of arrival”
AMI-8a	Heart attack patients given a procedure to open blocked blood vessels within 90 minutes of arrival
CAC-3	Children and their caregivers who received a home management plan of care document while hospitalized for asthma
ED-1b	Average (median) time patients spent in the emergency department, before they were admitted to the hospital as an inpatient (alternate Measure ID: ED-1)
ED-2b	Average (median) time patients spent in the emergency department, after the doctor decided to admit them as an inpatient before leaving the emergency department for their inpatient room (alternate Measure ID: ED-2)
EDV	Emergency department volume (alternate Measure ID: EDV-1)
HF-2	Heart failure patients given an evaluation of Left Ventricular Systolic (LVS) function
IMM-2	Patients assessed and given influenza vaccination
IMM-3	Healthcare workers given influenza vaccination (alternate Measure ID: IMM-3_OP_27_FAC_ADHPCT)
OP-1	Median time to fibrinolysis. *This measure is only found in the downloadable database, it is not displayed on Hospital Compare
OP-2	Outpatients with chest pain or possible heart attack who got drugs to break up blood clots within 30 minutes of arrival
OP-3b	Average (median) number of minutes before outpatients with chest pain or possible heart attack who needed specialized care were transferred to another hospital
OP-4	Outpatients with chest pain or possible heart attack who received aspirin within 24 hours of arrival or before transferring from the emergency department
OP-5	Average (median) number of minutes before outpatients with chest pain or possible heart attack got an ECG
OP-18b	Average (median) time patients spent in the emergency department before leaving from the visit (alternate Measure ID: OP-18)
OP-20	Average (median) time patients spent in the emergency department before they were seen by a healthcare professional
OP-21	Average (median) time patients who came to the emergency department with broken bones had to wait before getting pain medication
OP-22	Percentage of patients who left the emergency department before being seen

Access	HQI_HOSP_TimelyEffectiveCare
CSV	Timely and Effective Care – Hospital.csv
Measure ID	Measure Name
OP-23	Percentage of patients who came to the emergency department with stroke symptoms who received brain scan results within 45 minutes of arrival
OP-29	Percentage of patients receiving appropriate recommendation for follow-up screening colonoscopy
OP-30	Percentage of patients with history of polyps receiving follow-up colonoscopy in the appropriate timeframe
PC-01	Percent of mothers whose deliveries were scheduled too early (1-2 weeks early), when a scheduled delivery was not medically necessary
PN-6	Pneumonia patients given the most appropriate initial antibiotic(s)
SCIP-CARD-2	Surgery patients who were taking heart drugs called beta blockers before coming to the hospital, who were kept on the beta blockers during the period just before and after their surgery
SCIP-Inf-1	Surgery patients who were given an antibiotic at the right time (within one hour before surgery) to help prevent infection
SCIP-Inf-2	Surgery patients who were given the right kind of antibiotic to help prevent infection
SCIP-Inf-3	Surgery patients whose preventive antibiotics were stopped at the right time (within 24 hours after surgery)
SCIP-Inf-9	Surgery patients whose urinary catheters were removed on the first or second day after surgery
SCIP-VTE-2	Patients who got treatment at the right time (within 24 hours before or after their surgery) to help prevent blood clots after certain types of surgery
STK-1	Ischemic or hemorrhagic stroke patients who received treatment to keep blood clots from forming anywhere in the body within 2 days of hospital admission
STK-2	Ischemic stroke patients who received a prescription for medicine known to prevent complications caused by blood clots at discharge
STK-3	Ischemic stroke patients with a type of irregular heartbeat who were given a prescription for a blood thinner at discharge
STK-4	Ischemic stroke patients who got medicine to break up a blood clot within 3 hours after symptoms started
STK-5	Ischemic stroke patients who received medicine known to prevent complications caused by blood clots within 2 days of arriving at the hospital
STK-6	Ischemic stroke patients needing medicine to lower bad cholesterol, who were given a prescription for this medicine at discharge
STK-8	Ischemic or hemorrhagic stroke patients or caregivers who received written educational materials about stroke care and prevention during the hospital stay
STK-10	Ischemic or hemorrhagic stroke patients who were evaluated for rehabilitation services
VTE-1	Patients who got treatment to prevent blood clots on the day of or day after hospital admission or surgery
VTE-2	Patients who got treatment to prevent blood clots on the day of or day after being admitted to the intensive care unit (ICU)
VTE-3	Patients with blood clots who got the recommended treatment, which includes using two different blood thinner medicines at the same time
VTE-4	Patients with blood clots who were treated with an intravenous blood thinner, and then were checked to determine if the blood thinner caused unplanned complications
VTE-5	Patients with blood clots who were discharged on a blood thinner medicine and received written instructions about that medicine
VTE-6	Patients who developed a blood clot while in the hospital who did not get treatment that could have prevented it

Appendix B – HCAHPS Survey Questions Listing

The HCAHPS survey is 32 questions in length and contains 21 substantive items that encompass critical aspects of the hospital experience, 4 screening items to skip patients to appropriate questions, and 7 demographic items that are used for adjusting the mix of patients across hospitals for analytical purposes. An overview of HCAHPS topics (7 composite topics, 2 individual topics, and 2 global topics) can be found on the [Survey of Patients' Experiences](#) webpage in the About the Data section of Hospital Compare.

#	Question
Q1	During this hospital stay, how often did nurses treat you with courtesy and respect?
Q2	During this hospital stay, how often did nurses listen carefully to you?
Q3	During this hospital stay, how often did nurses explain things in a way you could understand?
Q4	During this hospital stay, after you pressed the call button, how often did you get help as soon as you wanted it?
Q5	During this hospital stay, how often did doctors treat you with courtesy and respect?
Q6	During this hospital stay, how often did doctors listen carefully to you?
Q7	During this hospital stay, how often did doctors explain things in a way you could understand?
Q8	During this hospital stay, how often were your room and bathroom kept clean?
Q9	During this hospital stay, how often was the area around your room quiet at night?
Q11	How often did you get help in getting to the bathroom or in using a bedpan as soon as you wanted?
Q13	During this hospital stay, how often was your pain well controlled?
Q14	During this hospital stay, how often did the hospital staff do everything they could to help you with your pain?
Q16	Before giving you any new medicine, how often did hospital staff tell you what the medicine was for?
Q17	Before giving you any new medicine, how often did hospital staff describe possible side effects in a way you could understand?
Q19	During this hospital stay, did doctors, nurses or other hospital staff talk with you about whether you would have the help you needed when you left the hospital?
Q20	During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the hospital?
Q21	Using any number from 0 to 10, where 0 is the worst hospital possible and 10 is the best hospital possible, what number would you use to rate this hospital during your stay?
Q22	Would you recommend this hospital to your friends and family?
Q23	During this hospital stay, staff took my preferences and those of my family or caregiver into account in deciding what my health care needs would be when I left.
Q24	When I left the hospital, I had a good understanding of the things I was responsible for in managing my health.
Q25	When I left the hospital, I clearly understood the purpose for taking each of my medications.

HCAHPS Star Ratings provide a quick summary of each HCAHPS measure in a format that allows consumers to more easily compare hospitals. The HCAHPS Summary Star Rating is a roll-up of all the HCAHPS Star Ratings.

HCAHPS linear mean scores are used in the construction of HCAHPS star ratings. The linear mean scores employ all survey response categories for the items in each HCAHPS measure and are converted and combined into a 0-100 linear-scaled measure score.

Additional information about [HCAHPS Star Ratings](#), including technical notes and frequently asked questions, can be found on the HCAHPS website (www.HCAHPSonline.org).

Appendix C – Footnote Crosswalk

The footnote numbers below are associated with the Hospital Compare quality measures:

Hospital Compare Footnote Values		
#	Text	Definition
1	The number of cases/patients is too few to report.	This footnote is applied: <ul style="list-style-type: none"> • When the number of cases/patients does not meet the required minimum amount for public reporting; • When the number of cases/patients is too small to reliably tell how well a hospital is performing; and/or • To protect personal health information.
2	Data submitted were based on a sample of cases/patients.	This footnote indicates that a hospital chose to submit data for a random sample of its cases/patients while following specific rules for how to select the patients.
3	Results are based on a shorter time period than required.	This footnote indicates that the hospital's results were based on data from less than the maximum possible time period generally used to collect data for a measure. View the Measures and current data collection periods for more information. This footnote is applied: <ul style="list-style-type: none"> • When a hospital elected not to submit data for a measure for one or more, but not all possible quarters; • When there was no data to submit for a measure for one or more, but not all possible quarters; and/or • When a hospital did not successfully submit data for a measure for one or more, but not all possible quarters.
4	Data suppressed by CMS for one or more quarters.	The results for these measures were excluded for various reasons, such as data inaccuracies.
5	Results are not available for this reporting period.	This footnote is applied: <ul style="list-style-type: none"> • When a hospital elected not to submit data for the entire reporting period; or • When a hospital had no claims data for a particular measure; or • When a hospital elected to suppress a measure from being publicly reported.
6	Fewer than 100 patients completed the HCAHPS survey. Use these scores with caution, as the number of surveys may be too low to reliably assess hospital performance.	This footnote is applied when the number of completed surveys the hospital or its vendor provided to CMS is less than 100.
7	No cases met the criteria for this measure.	This footnote is applied when a hospital did not have any cases meet the inclusion criteria for a measure.
8	The lower limit of the confidence interval cannot be calculated if the number of observed infections equals zero.	None
9	No data are available from the state/territory for this reporting period.	This footnote is applied when: <ul style="list-style-type: none"> • Too few hospitals in a state/territory had data available or • No data was reported for this state/territory.

Hospital Compare Footnote Values		
#	Text	Definition
10	Very few patients were eligible for the HCAHPS survey. The scores shown reflect fewer than 50 completed surveys. Use these scores with caution, as the number of surveys may be too low to reliably assess hospital performance.	This footnote is applied when the number of completed surveys the hospital or its vendor provided to CMS is less than 50.
11	There were discrepancies in the data collection process.	This footnote is applied when there have been deviations from data collection protocols. CMS is working to correct this situation.
12	This measure does not apply to this hospital for this reporting period.	This footnote is applied when: <ul style="list-style-type: none"> • There were zero device days or procedures for the entire reporting period, • The hospital does not have ICU locations. • The hospital is a new member of the registry or reporting program and didn't have an opportunity to submit any cases; or • The hospital doesn't report this voluntary measure
13	Results cannot be calculated for this reporting period.	This footnote is applied when: <ul style="list-style-type: none"> • The number of predicted infections is less than 1. • The number of observed MRSA or Clostridium difficile infections present on admission (community-onset prevalence) was above a pre-determined cut-point.
14	The results for this state are combined with nearby states to protect confidentiality.	This footnote is applied when a state has fewer than 10 hospitals in order to protect confidentiality. Results are combined as follows: (1) the District of Columbia and Delaware are combined; (2) Alaska and Washington are combined; (3) North Dakota and South Dakota are combined; and (4) New Hampshire and Vermont are combined. Hospitals located in Maryland and U.S. territories are excluded from the measure calculation.
15	The number of cases/patients is too few to report a star rating.	This footnote is applied when the number of completed surveys the hospital or its vendor provided to CMS is less than 100. In order to receive HCAHPS Star Ratings, hospitals must have at least 100 completed HCAHPS Surveys over a four quarter period.
16	There are too few measures or measure groups reported to calculate a star rating or measure group score.	This footnote is applied when a hospital: <ul style="list-style-type: none"> • Reported data for fewer than 3 measures in any measure group used to calculate star ratings; or • Reported data for fewer than 3 of the measure groups used to calculate star ratings; or • Did not report data for at least 1 outcomes measure group.
17	This hospital's star rating only includes data reported on inpatient services.	This footnote is applied when a hospital only reports data for inpatient hospital services.
18	This result is not based on performance data; the hospital did not submit data and did not submit a waiver.	This footnote is applied when a hospital did not submit data through the National Healthcare Safety Network (NHSN) and did not have a measure exemption/waiver request on file. In such a case, the hospital receives the maximum score of 10.
19	Data are shown only for hospitals that participate in the Inpatient Quality Reporting (IQR) and Outpatient Quality Reporting (OQR) programs.	Footnote is applied for those hospitals that do not participate in the IQR, OQR programs.

Hospital Compare Footnote Values		
#	Text	Definition
*	For Maryland hospitals, no data are available to calculate a PSI 90 measure result; therefore, no performance decile or points are assigned for Domain 1 and the Total HAC score is dependent on the Domain 2 score.	None
**	This value was calculated using data reported by the hospital in compliance with the requirements outlined for this program and does not take into account information that became available at a later date.	None
