BPP Online Data

- Online prices collected
 - Directly from each retailer s website
 - Largest retailers by market share in each country
 - Multi-channel retailers → sell offline and online

Every day, a software downloads a list of webpages, analyses the HTML code, extracts price data, and stores it in a database

Id	Product	Price	Date
MD963LL	Ipad Mini Smat Cover - Dark Grey	39	07/01/2012
MD955DD	IPad mini Smart Cover - (PRODUCT) RED	39	07/01/2012
MD48FSS	IPad Smart Case - Polyurethane - Dark Gray	49	07/01/2012

```

```

Online Price Data has Advantages and Disadvantages

Advantages	Disadvantages
<ul style="list-style-type: none">• Cheaper to collect• Frequency (daily)• Granularity<ul style="list-style-type: none">• All product details (brands, size, etc)• All goods and varieties available for sale (census)• New goods automatically sampled• No time-averages, imputations, adjustments, or any kind of third-party (data collector) interference.• Easier to compare internationally	<ul style="list-style-type: none">• Not all categories of goods and services are online• Fewer retailers and locations than CPI• Short time series• Online and Offline prices may behave differently

Publicly-Shared Datasets

1. Supermarket Data:

Daily prices for all goods sold by some of the largest Supermarkets in Latin America and the US

- Frequency: Daily
- Retailers: 7
- Countries: 6 (Argentina, Brazil, Chile, Colombia, Venezuela, and the US)
- Dates : 2007 to 2011
- Main variables: product id, date, price, sale indicator, category

Description	Prices collected from online retailers can be used to construct daily price indexes that complement official statistics. This paper studies their ability to match official inflation estimates in five Latin American countries, with a focus on Argentina, where official statistics have been heavily criticized in recent years. The data were collected between October 2007 and March 2011 from the largest supermarket in each country. In Brazil, Chile, Colombia, and Venezuela, online price indexes approximate both the level and main dynamics of official inflation. By contrast, Argentina's online inflation rate is nearly three times higher than the official estimate.
Subject	Business and Management; Social Sciences
Keyword	Online Prices, Online Inflation
Notes	Please cite this paper if you use the data This dataverse contains the raw data files for daily posted prices for all goods sold by one of the largest supermarkets in Argentina, Chile, Brazil, Colombia, and Venezuela. Data was collected between October 2007 and March 2011. See acavallo.mit.edu for other replication materials of this paper. See bpp.mit.edu for more details about the Billion Prices Project

Are Online Prices representative ?

- The `online store` is effectively the *largest* store in most retailers
 - Eg: Walmart has 4759 stores in the US. The median store has 0.02% of sales. The online store has 8% of sales
- Simultaneous online-offline data collection in 10 countries shows large retailers tend to have identical online and offline prices

Preliminary results from Cavallo (2015) Are Online and Offline Prices Similar?

PRELIMINARY

Table 1: Country - Price Level Differences

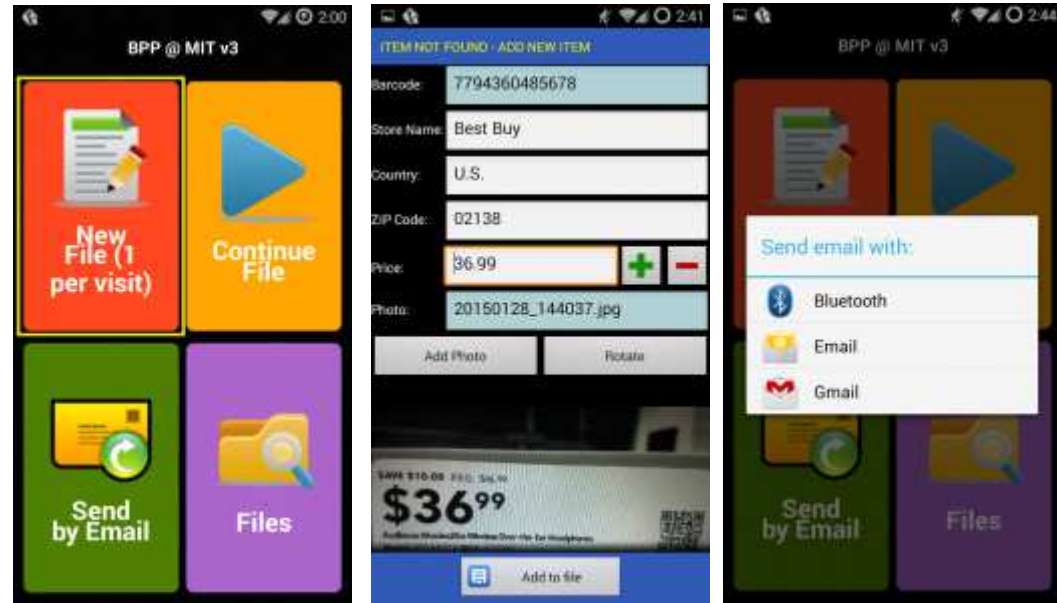

Country	(1) Ret.	(2) Days	(3) Workers	(4) Prod.	(5) Obs	(6) Ident. (%)	(7) High On (%)	(8) Low On (%)	(9) Differ. (%)	(10) On Mark. (%)

A Free Offline Data Collection Tool

<https://play.google.com/store/apps/details?id=com.mit.bpp&hl=en>

- Download the free BPP app for android phones (bpp.mit.edu)
- Contact us to receive a custom Project Code → allows us to separate your data
- Steps:
 - You scan and email us the files (all within the app)
 - Every day, we clean and consolidate the data, and save everything (prices, text, photos) in a shared dropbox folder.

Future Data Releases

- We plan to periodically upgrade and publish new datasets:
 - See <http://bpp.mit.edu/datasets/>
 - Follow us on twitter to get notified (@bppmit).
