

MCBS_HMO_weights_readme.txt

Purpose: Create HMO adjustment weights for each of the 5 multiply imputed datasets by population and multiple. Within imputed survey data, including participants with both 'pure' and 'non-pure' Medicare enrollment, is used for creation of the adjustment weights.

Community population--Program/code required:
HMO_Weights_MCBS2009.sas

Institutional population--Program/code required:
HMO_Weights_MCBS2009_INST.sas

```
*****
*****
Program: HMO_Weights_MCBS2009_INST.sas
Purpose:
1. Calculate weights to adjust for MCBS where not considered "Pure" Medicare
enrollment (MCBS "pure"
selected as follows: 1. no participation in Medicare Advantage program, and
2. enrolled in Medicare parts A & B
for the full 12-months unless participant died during the year (if
mcadv_months=0 and if mcab_months_3grp=2 or died=1).
2. Incorporate adjustment to year 2000 and 2010 dollars:
    a. 2000: If year=2009 then adj=88.723/109.729
    b. 2010: If year=2009 then adj=110.992/109.729
3. Incorporate NHEA cost adjustment.
