THE PROBLEM AND ITS SETTING
NATIONAL BUREAU OF ECONOMIC RESEARCH
1965

OFFICERS
Frank W. Fetter, Chairman
Arthur F. Burns, President
Theodore O. Yntema, Vice-President
Donald B. Woodward, Treasurer
William J. Carson, Secretary
Geoffrey H. Moore, Director of Research
Douglas H. Eldridge, Executive Director
Hal B. Lary, Associate Director of Research
Victor R. Fuchs, Associate Director of Research

DIRECTORS AT LARGE
Robert B. Anderson, New York City
Wallace J. Campbell, Foundation for Cooperative Housing
Erwin D. Canham, Christian Science Monitor
Solomon Fabricant, New York University
Marion B. Folsom, Eastman Kodak Company
Crawford H. Greenewalt, E. I. du Pont de Nemours & Company
Gabriel Hauge, Manufacturers Hanover Trust Company
A. J. Hayes, International Association of Machinists
Walter W. Heller, University of Minnesota
Albert J. Hettinger, Jr., Lazard Frères and Company
H. W. Laidler, League for Industrial Democracy
Geoffrey H. Moore, National Bureau of Economic Research
Charles G. Mortimer, General Foods Corporation
J. Wilson Newman, Dun & Bradstreet, Inc.
George B. Roberts, Larchmont, New York
Harry Scherman, Book-of-the-Month Club
Boris Shishkin, American Federation of Labor and Congress of Industrial Organizations
George Soule, South Kent, Connecticut
Gus Tyler, International Ladies’ Garment Workers’ Union
Joseph H. Willits, Langhorne, Pennsylvania
Donald B. Woodward, A. W. Jones and Company

DIRECTORS BY UNIVERSITY APPOINTMENT
V. W. Bladen, Toronto
Francis M. Boddy, Minnesota
Arthur F. Burns, Columbia
Lester V. Chandler, Princeton
Melvin G. de Chazeau, Cornell
Frank W. Fetter, Northwestern
R. A. Gordon, California

DIRECTORS BY APPOINTMENT OF OTHER ORGANIZATIONS
V. W. Groves, Wisconsin
Gottfried Haberler, Harvard
Maurice W. Lee, North Carolina
Lloyd G. Reynolds, Yale
Paul A. Samuelson, Massachusetts

RELATION OF THE DIRECTORS
TO THE WORK AND PUBLICATIONS
OF THE NATIONAL BUREAU OF ECONOMIC RESEARCH

1. The object of the National Bureau of Economic Research is to ascertain and to present to the public important economic facts and their interpretation in a scientific and impartial manner. The Board of Directors is charged with the responsibility of ensuring that the work of the National Bureau is carried on in strict conformity with this object.

2. To this end the Board of Directors shall appoint one or more Directors of Research.

3. The Director or Directors of Research shall submit to the members of the Board, or to its Executive Committee, for their formal adoption, all specific proposals concerning researches to be instituted.

4. No report shall be published until the Director or Directors of Research shall have submitted to the Board a summary drawing attention to the character of the data and their utilization in the report, the nature and treatment of the problems involved, the main conclusions and such other information as in their opinion would serve to determine the suitability of the report for publication in accordance with the principles of the National Bureau.

5. A copy of any manuscript proposed for publication shall also be submitted to each member of the Board. For each manuscript to be so submitted a special committee shall be appointed by the President, or at his designation by the Executive Director, consisting of three Directors selected as nearly as may be one from each general division of the Board. The names of the special manuscript committee shall be stated to each Director when the summary and report described in paragraph (4) are sent to him. It shall be the duty of each member of the committee to read the manuscript. If each member of the special committee signifies his approval within thirty days, the manuscript may be published. If each member of the special committee has not signified his approval within thirty days of the transmittal of the summary and report, the Director of Research shall then notify each member of the Board, requesting approval or disapproval of publication, and thirty additional days shall be granted for this purpose. The manuscript shall then not be published unless at least a majority of the entire Board and a two-thirds majority of those members of the Board who shall have voted on the proposal within the time fixed for the receipt of votes on the publication proposed shall have approved.

6. No manuscript may be published, though approved by each member of the special committee, until forty-five days have elapsed from the transmittal of the summary and report. The interval is allowed for the receipt of any memorandum of dissent or reservation, together with a brief statement of his reasons, that any member may wish to express; and such memorandum of dissent or reservation shall be published with the manuscript if he so desires. Publication does not, however, imply that each member of the Board has read the manuscript, or that either members of the Board in general, or of the special committee, have passed upon its validity in every detail.

7. A copy of this resolution shall, unless otherwise determined by the Board, be printed in each copy of every National Bureau book.

(Resolution adopted October 25, 1926 and revised February 6, 1933 and February 24, 1941)
PREFACE

Much has been learned about business cycles since 1913, when my first book on that problem was published. Economic theorists have been studying the phenomena with increasing energy and thoroughness—Albert Aftalion and Jean Lescure in France; Mentor Bouamian and S. A. Pervushin in Russia; Gustav Cassel in Sweden; John Maurice Clark, William T. Foster, Waddill Catchings, Alvin H. Hansen, and Henry L. Moore in America; R. H. Hawtrey, John A. Hobson, A. C. Pigou, and Dennis H. Robertson in England; Emil Lederer, Joseph Schumpeter and Arthur Spiethoff in Germany, to name but a few. Economic statisticians have made rapid progress in analyzing time series—witness the accomplishment of Warren M. Persons and his many co-workers here and abroad. Most important of all in promise for the future, the leading commercial nations are learning to keep more adequate records of their economic activities. Of the extraordinary business fluctuations through which the world has been passing of late, we have fuller knowledge than of any earlier cycles.

For perhaps ten years my unwieldy quarto has been out of print. At least as long it has been out of date. Nor could it be brought abreast of current research by mere revision. It became plain that if I could add anything of value to the work in process it would be only by writing a new book. But single-handed, I could not manage the wealth of new materials, or apply the improved methods of statistical analysis. From this quandary I was rescued by the National Bureau of Economic Research, which offered to collect and analyze the data I needed, and to supply the gaps in my equipment.

Despite the National Bureau’s efficient aid, my resurvey of the field is taking more time than the first survey took. This work has been my chief concern since 1923, yet only one volume is ready for publication. It deals, as the sub-title indicates, with “The Problem and its Setting.” A second volume on “The Rhythm of Business Activity” will follow as soon as I can finish it.

The present treatise resembles its forerunner in general plan. But the statistical data prove so extensive that they must be pub-
lished separately in a series of volumes, instead of being included as before with the theoretical discussion. There is the more reason for this change in that the National Bureau's collection of tables promises to be a source book of great value to many workers concerned with other problems than business cycles. Also, the collection of annals, which in the earlier treatise covered only four countries and 23 years, has grown into a survey embracing 17 countries and extending back to 1790 in the United States and England. That collection, made by Dr. Willard L. Thorp, has already appeared in print.

I have not been able to devise a new way of conducting the inquiry which seemed better than the way followed in 1913. My earlier impressions that business cycles consist of exceedingly complex interactions among a considerable number of economic processes, that to gain insight into these interactions one must combine historical studies with quantitative and qualitative analysis, that the phenomena are peculiar to a certain form of economic organization, and that understanding of this scheme of institutions is prerequisite to an understanding of cyclical fluctuations—these impressions have been confirmed by my efforts to treat the subject in a simpler fashion. Hence the new version is not shorter or easier than its predecessor. Much to my regret, it makes even heavier demands upon a reader's time and effort.

From the Staff and the Directors of the National Bureau of Economic Research I have had most generous help. Among the staff members Drs. Frederick C. Mills, Willford I. King, Willard L. Thorp and Simon S. Kuznets have put their technical skill freely at my disposal. Among the Directors, Professor Allyn A. Young and Colonel Malcolm C. Rorty have made especially searching criticisms of the first draft. Dr. Edwin F. Gay, Director of Research, has been my mainstay for counsel from the beginning of the undertaking. Several other friends have read parts of the manuscript and suggested improvements—Messrs. Carl Snyder and Karl Karsten, Professors Walter F. Willcox, Warren M. Persons, Vladimir G. Simkhovitch, and James W. Angell. The Harvard Committee on Economic Research through its chairman Professor Charles J. Bullock, the American Telephone and Telegraph Company through its statistician Mr. Seymour L. Andrew, Sir William Beveridge, Mr. Snyder, and Dr. Dorothy S. Thomas have kindly consented to the free use I have made of their contributions. Miss Edith Handler of the National
Bureau has made most of the charts. My secretary, Miss Catherine Lochhead, has shared in the labors of proof reading and indexing.

To all these men and women, and to the many co-workers by whose criticisms and constructive suggestions I have sought to profit, my hearty thanks are due.

WESLEY C. MITCHELL

New York City, June 1st, 1927.

P.S. Inasmuch as the National Bureau hopes to publish a second volume of this treatise at no distant date it seems time to place the words Volume I upon the title page. A few typographical errors have been corrected in this printing but no thorough revision has been undertaken.

W. C. M.

December 1, 1936.

Note to the Nineteenth Printing

This edition is an offset reproduction of the 1936 reprinting of this volume. The list of National Bureau officers and directors has been brought up to date. Following page 489, National Bureau publications especially concerned with business cycles are listed.
