

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: Business Cycles: Theory, History, Indicators, and Forecasting

Volume Author/Editor: Victor Zarnowitz

Volume Publisher: University of Chicago Press

Volume ISBN: 0-226-97890-7

Volume URL: <http://www.nber.org/books/zarn92-1>

Conference Date: n/a

Publication Date: January 1992

Chapter Title: Subject Index

Chapter Author: Victor Zarnowitz

Chapter URL: <http://www.nber.org/chapters/c10392>

Chapter pages in book: (p. 585 - 593)

Subject Index

- Acceleration principle, 31, 38
Accelerator-multiplier models, 1–2, 4, 38–42, 74, 171–72, 264
AD. *See* Aggregate demand curve
Adaptive expectations (AE), 53, 62–63
AD-AS model, 253. *See also* Aggregate demand curve; Aggregate supply (AS) curve
AE. *See* Adaptive expectations
Aggregate demand (AD) curve, 155–56, 253–54
Aggregate supply (AS) curve, 155, 253
Agricultural sector, 97
Amplitudes: assessment of, 237; in cyclical movements, 220–30; standardization in composite index construction, 338; variation of phases in, 289–93
ARIMA (autoregressive integrated moving average) models and forecasts, 184, 412
AR roots. *See* Autoregressive unit roots
ARSME. *See* Average root-mean-square error
AS. *See* Aggregate supply (AS) curve
ASA-NBER median forecasts, 429, 435
ASA-NBER Quarterly Economic Outlook Survey study, 410–11
ASA-NBER survey: accuracy and consistency of participants in, 446–61; data on point and probabilistic forecasts, 517–18; forecasts, 396, 399, 401–4, 410, 429–42; properties of, 499–500; survey methods of, 444–46, 466–69
AT&T index, 224n30
Autoregressive (AR) unit roots, 184
Average root-mean-square error (ARSME), 411t, 412
Axe-Houghton index, 224n30
Ayres's index, 222n24, 225
Babson index, 224n30, 225, 229
Banks, panics and suspensions, 108
Bayesian vector autoregression (BVAR) models and forecasts, 401, 411–12
BCD. *See* *Business Conditions Digest*
BEA. *See* U.S. Department of Commerce, Bureau of Economic Analysis
Blue Chip Economic Indicators, 387n5, 404
Brookings-SSRC model, 175n20, 200, 266–68, 271, 275–76, 279
Budget, federal: components of deficit and surplus, 103–5; growth and cyclicity of, 101–2; policy for, 113–14
Business Conditions Digest (BCD), 299, 303, 305, 319
Business cycles: continuity of, 357; dating by NBER of, 283–88, 348; defined, 236–37, 283; derivation of reference chronologies for, 214–16; differences in endogenous and exogenous models of, 44; distinguished from growth cycle, 22, 30, 214–16, 242, 346; diversity in measured, 3, 17–19; equilibrium approach to, 53–60; exogenous and endogenous models of, 1–2; forces causing diversity in, 14; historical durations of, 22–23, 119–23, 125, 220–31, 233–37, 263; Keynesian theory of, 33–35; long-wave

- Business cycles (*continued*)
 hypothesis of, 194, 237–38; major and minor, 239–42; moderation in, 93–100, 123, 208–11, 231, 295–98; nonstochastic and stochastic simulations of, 266–79; periodicity in, 193–96, 262; persistence, pervasiveness and endogenous nature of, xv, 3, 22; randomness in, xvi, 260–61; random shock effects on persistence of, 57–60; recurrent features of, 23–27, 263–64; theories of, 50–51, 168–73, 309–12, 316; timing of turns in, 289, 293–98; from 1879 to 1980s, 119–23, 125. *See also* Contractions; Cyclical behavior; Depressions; Expansions; Growth cycles; Peaks; Recessions; Reference chronologies; Troughs; Turning points
- Business cycle theory: contemporary, 1–2; examination of regularity using, 198–200; historical, self-sustaining, 31–44, 309–12; new-classical equilibrium theories of, 5; responses to shocks or disturbances, 44–73; unsettled and active state of, xiii. *See also* Nonlinear models; Real business cycle
- Business cycle time, 189
- Business outlook surveys, 463–64, 477, 492
- BVAR. *See* Bayesian vector autoregression (BVAR) models and forecasts
- Catastrophe theories, 40
- CDI indexes. *See* Cumulated diffusion indexes
- CEDG. *See* Consumer expenditures for durable goods
- Center for International Business Cycle Research (CIBCR), 191, 195, 311n10; composite indexes of, 355–56; economic indicators of, 294–95, 353; growth cycle reference chronologies of, 195, 213–16
- Change in business inventories (CBI), 445, 448
- Chaotic fluctuation models, 197–98
- Chase Econometric Associates, Inc. (Chase), 429–42
- CIBCR. *See* Center for International Business Cycle Research
- Classical school, 32
- Cleveland Trust Company index, 220, 222. *See also* Ayres's index
- Coincident composite indexes: components of, 319–23, 330–32; for eight countries, 191–93; of Stock-Watson (S-W), 352. *See also* Stock-Watson
- Coincident indicators, 283–85; coincidence in nonstochastic simulations of, 271, 274–75; means and standard deviations for, 320–21; role and components of, 293, 314. *See also* Composite indexes; Roughly coincident indicators
- Commercial paper rate, 86–90
- Composite indexes: construction methods for NBER-BEA, 333, 337–38; construction of, 314, 317; current published BEA, 328–32; international, 338; measurement of error in, 323–26; selection of components for, 319–23. *See also* Coincident composite index; Lagging composite index; Leading composite index
- Consensus forecasts, 492–93, 517
- Consumer expenditures for durable goods (CEDG), 448, 451, 467
- Consumer price index (CPI): as deflator, 147; historical data for, 151
- Consumer sentiment index, 122
- Consumption: cyclical of, 93–95; dampening of fluctuations in, 103
- Contractions, business, 22–25; changing and relative length of, 22, 83, 85, 87, 217, 289–93, 298–99; difference from growth patterns, 30; historical, 217–30; related to financial instability, 108, 110–12; severe, 25; since World War II, 77. *See also* Depressions; Recessions
- Contract-theoretic models, 71–75
- Corporate bond prices, 355
- Council of Economic Advisers (CEA) forecasts, 388, 397, 399, 422
- Crashes, 105–9
- Cumulated diffusion indexes (CDI), 277–78
- Cycle phases. *See* Contractions, business; Expansions, business
- Cyclical behavior: asymmetries in, 256–59, 264; comparison of NBER and simulation analyses, 266–80; in cost, productivity, and profits, 140–43; features of, 23–27; moderation in, 83–87, 125, 158–61; periodicity in, 193–96; prediction of downturns in, 260–61; reduced instability in, 83–87, 92–124; variation in amplitude and duration of, 94, 205–8, 218–19. *See also* Long-wave hypothesis; Nonlinearities
- Cyclical indicators, 283; behavior of, 289, 294–95; criteria for selecting NBER,

- 317–19; effect of disturbances on, 317; information lags in data for, 326–28; measurement errors in, 317; modeling with, 312–14; model to explain behavior of, 310–12; published data of, 299–305; revisions in, 324–25, 328, 348; of revivals and recoveries, 305–6; timing of, 26, 299–308, 313; underlying theory and role of, 312–14; used in combined form, xvi. *See also* Coincident indicators; Composite indexes; Lagging indicators; Leading indicators; Roughly coincident indicators
- Cyclical turns. *See* Turning points
- Data: artificial, 78; definitions for macroeconomic variable study, 359–62; errors in, 317; historical business cycle, 217–30; historical collection and measurement techniques, 77–79; use of quarterly, 266; uses and limitations of forecast, 414–16. *See also* National Bureau of Economic Research; Reference chronologies; Time series
- Data Resources, Inc. (DRI): as forecaster, 429–42; model, 201, 313
- Data sources: for business cycle analysis, 217, 219–20; for cyclical behavior simulations, 267; historical and contemporary, 77–79, 87, 89, 91; for macroeconomic variable study, 359–64; for spectral analysis of investment, 249–50. *See also* Center for International Business Cycle Research; National Bureau of Economic Research; Reference chronologies; Time series
- Dating process (NBER), 283–88, 348
- Decomposition. *See* Deviation from trend
- Deflation: expectations of, 156–57; historical U.S., 150–51 in recession, 25; replaced by disinflation, 150–51; trends in, 194
- Delivery lags, 137–38, 145. *See also* Market clearing
- De Long–Summers hypothesis of sticky wages, 158, 160–61
- Depressions, business, 23–24; difference from growth patterns, 30; effect on economic growth, 230; long, severe, 33–35; prediction of recurrent, 66–67
- Detrended cycles. *See* Deviation from trend; Growth cycles
- Detrending. *See* Deviation from trend
- Deviation from trend: in dating growth cycles, 285, 289–92; fluctuations in detrended series, 242–45; process of, 195–96; techniques of computation of, 185–86. *See also* Diffusion indexes
- Dickey-Fuller tests, 366–70
- Difference-stationary (DS) process, 184
- Diffusion indexes, 285, 288–89, 292–93. *See also* Cumulated diffusion indexes
- Disinflation, 25, 121, 150–51
- DS process. *See* Difference-stationary (DS) process
- Dispersion measures, 503, 506, 508
- Duration: comparison of historical, 218–19, 233–37; country comparisons of, 233–35; of cycle phases, 260; of growth cycles, 243–45; variation in business cycle, 22–23, 217–31, 289–93
- Duration dependence, 259–62
- Durbin-Watson (DW) tests, 476, 478–79
- Econometric models, 173–76
- Economic activity, aggregate measures, 286–87, 290–91
- Economic Forecasts: A Worldwide Survey*, 387n5, 519
- Economic indicators, 28, 283, 309
- Economic policy, 176–79. *See also* Fiscal policy; Macroeconomic policy; Monetary policy
- Economy: factors contributing to stability of, 3–4; structural changes in, 93–100
- ECP. *See* Estimates of current position
- Efficiency wages. *See* Wages
- Efficiency wage theory, 154
- Employment: in government sector, 97–100; shift in composition of, 97–98
- Endogeneity: of business cycles, xv, 3, 22, 32, 73–74; models of, 1–2, 11–14, 44
- Equilibrium models, 53–60
- Estimates of current position (ECP), 420
- Exogeneity: of economic policy, 177–79; of events and variables, 44; in historical theories, 32; models of, 1–2, 44; in monetarist theory, 48; tests for, 68–69, 365–81; theories of, 44–47, 74–75, 199
- Expansions, business: changing length of, 22–24, 53, 85, 87, 217, 297–98; effect on economic growth of, 230; historical, 217–30; probability of termination of, 259–62; relative and variable lengths of, 83, 264, 289–93; since World War II, 77; speculative peaks in, 105–9
- Expectations: adaptive (AE), 53, 62–63; con-

Expectations (*continued*)

- ditions for optimistic, 122–23; formation of, 63–64; of inflation, 40; influences on, 65; rationality of, 60. *See also* Rational expectations hypothesis
- Federal Reserve Board (FRB) forecasts, 388
- Federal Reserve Board–MIT–Penn (FRB–MIT–Penn) model, 175n20, 200, 266–75
- Federal Reserve System activity, 114–23
- Filtering, in forecasting, 340; 348–49
- Financial crises, 105–12
- Financial instability, 65–67, 101–12
- Fiscal index (Blanchard), 363
- Fiscal policy, 113–14. *See also* Budget, federal; Spending, public; Stabilizers, automatic; Tax policy
- Fixed-capital investment: cyclicity of, 245–51; long-term, 239
- Flexible accelerator, 38
- Fluctuations, business, 215–17
- FMP model. *See* Federal Reserve Board–MIT–Penn model
- Forecasters, economic, 404–5, 420–21; process of forming predictions, 61–62; using macroeconomic models, 429, 463
- Forecasting, economic: conditions for progress in, 414–15; errors in, xvi–xvii, 262; of industrial production (IP), 351–52; macroeconomic, xvi–xvii, 314–15; measurement of errors in ASA-NBER surveys, 467–68; methods and results of, 401–5; sequential signaling system of, 341–46; testing for bias in, 469–81; testing for dependency in errors in, 481–88; uncertainty in, 493–96; use of leading indicators in, 339–45; using macroeconomic models for, 313, 339, 429; using SPR method, 346–48; VAR models for, 350–51
- Forecasts, econometric, 405–6, 408, 410–12
- Forecasts, economic: accuracy of, 389–93, 397, 403–4, 408, 417–19, 430, 432, 434–37, 441–43, 475–76; of annual GNP, 416–22, 443; bias testing in multiperiod, 469–81; for changes in GNP and IPD, 392–93, 398, 400, 416–22, 428–43; combining individual data of, xvi–xvii, 407–8, 412–13; comparisons of, 521–34; confidence regions in, 473–75; consensus, 492–93, 517; error measurement for, 391–93, 521–34; estimates, tests, and errors for group mean, 476–81, 484–88; evaluation of annual GNP and price level, 420–29; function and content, 385–87; of GNP, 416–29; measures of absolute accuracy for, 398–401; measures of relative accuracy and consistency, 446–54; multiperiod quarterly, 415, 429–43, 448–54; pooling of, 477–81; Q and F statistical significance, 483; quality determination for, 389–90, 519–21; sources and uses of, 387–89; sources of error or bias in, 395–97; testing for dependencies in errors in, 481–88; tests of rationality for, 464–66; tests for bias in multiperiod, 469–71, 478–79; under or overestimation of growth in, 421–22; use of REH in, 64. *See also* Business outlook surveys
- General Electric Company (GE), 429–42
- GNP (gross national product): analysis of factors influencing real, 370–79; backcasting method data for, 78, 89, 91; changes in variability of real, 79–81, 87–91; forecasts of real, 392–93, 398, 400, 416–43; forecasts since 1947 of, 416–22; nonstochastic simulation of real, 271–75; variation in real, 79–81, 84–86, 90. *See also* Real GNP growth
- Gold standard, 119–21
- Government bond prices, 121
- Government sector: increase in, 98–100; relation to business cycle of activity in, 252–54. *See also* Employment; Political business cycle
- Great Depression (1930s): financial instability created by, 109–10; labor unionization after, 151–52
- Growth, economic: factors affecting, 203–4, 230–31; international comparisons of, 190–93; since World War II, 208–11; under- or overprediction of RGNP, 393–95. *See also* Real GNP growth
- Growth cycles: areas affected by, 30; compared to business cycles, 195–96, 204–8, 214–16, 242, 346; defined, 29–30; derivation of reference chronology for, 213–14; differentiation from growth rates and business cycles, 29–30; evidence of, xv; fluctuations in time series for, 242–45, 264; frequency and symmetry of, 214, 216; history of analysis in, 211–17; indicators used in analysis of, 195, 294–95, 353; international scope of, 216,

- 349n34; reference chronologies of, 195–96; using detrended and trend-unadjusted series, 185, 195, 213, 285, 289–92
- Growth rates: analysis of historical, 206, 230–31; differentiation of growth cycles from, 29–30
- Implicit price deflator (IPD) for GNP, 392, 394–95, 398, 400, 422, 428, 446, 451, 467
- Indexes. *See* Coincident composite index; Composite indexes; Consumer price index; Diffusion indexes; Lagging composite index; Leading composite index; Long-leading composite index; Producer price index; Short-leading composite index; Wholesale price index
- Indicators. *See* Cyclical indicators; Coincident indicators; Economic indicators; Lagging indicators; Leading indicators; Roughly coincident indicators
- Industrial production (IP); forecasting, 351–52; indexes of, 229; long-term fluctuation in, 239; Persons and Federal Reserve indexes of, 362; predictions of index of, 394. *See also* Kuznets cycles
- Industrial sector, 97, 209
- Inflation: expectations of, 40, 157, 516; forecasts of, 443; historical U.S., 150–51, 161; impact on fiscal policymaking of, 104–5; over- or underprediction of, 393–95; predictions of, 64; rising, persistent, 36–37, 77, 121; trends in, 9–10, 194; uncertainty in expected rate of, 161–62. *See also* Implicit price deflator; Natural-rate hypothesis
- Information: effect of incomplete or lagging, 54; full, 5; imperfect or incomplete, 5, 66, 68; lags for indicator data, 326–28; in rational expectations model, 60–61; role of, 18
- Interest rates: cyclical variation of, 69; effect of shocks on, 68–69, 160; expectations models of, 158–61; historical movements of long and short-term, 161; as lagging or long leading indicators, 353; long-term movements in, 239; in monetarist theory, 48; proposal for index improvement using, 354–55. *See also* Commercial paper rate; Corporate bond prices; Government bond prices
- Intertemporal substitution hypothesis (ISH), 53–57
- Inventory investment: causes and consequences of, 41–42; control of, 96; cyclicity of, 41–42, 245–51; long-term 239; in market clearing, 138. *See also* Kitchin cycles
- Investment accelerator, 1
- Investment cyclicity, 93–97. *See also* Fixed-capital investment; Inventory investment
- IP. *See* Industrial production
- IPD. *See* Implicit price deflator for GNP
- ISH. *See* Intertemporal substitution hypothesis
- IS/LM-AD/AS model, 70
- IS-LM cob-web type model, 254
- IS-LM model, 253, 255
- Juglar cycles, 239–40
- Kaldor model, 40
- Keynesian business cycle theory, 33–35
- Kitchin cycles, 239–40
- Klein-Goldberger model, 173, 200, 266
- Kondratieff long-wave cycles, 211, 237–39
- Kuznets cycles, 239
- Labor contracts, 133–34, 151–55
- Labor force: composition variation during business cycle, 147; hoarding of, 8
- Labor market: effect of choices in, 53–54; equilibrium in, 56. *See also* Intertemporal substitution hypothesis
- Lagging composite index, 319–23, 329–31
- Lagging indicators: coincidence in nonstochastic simulations of, 270, 274–75; components of, 28, 293; as long leaders, 294–95; means, standard deviations, and distribution, 296–99; medians and ranges of, 303–5; role in business cycle of, 255, 293, 314. *See also* Composite indexes
- Leading composite index: components of U.S., 319–23, 330–31; nonstationary component of, 368; to predict values of macroeconomic aggregates, 349; prime-mover based, 311; of Stock-Watson, 352–53; time series in, 357; U.S. Department of Commerce, 311n10; use in forecasting of, 341. *See also* Long-leading composite index; Short-leading composite index
- Leading indicators (LI): components of, 28, 293; in macroeconomic models, 313; means, standard deviations, and distribu-

- Leading indicators (LI) (*continued*)
 tion, 296–99; medians and ranges of, 303–5; of OECD and CIBCR, 311n10; role in business cycles of, 255, 293, 314; in slowdown and contraction, 214, 216; successive lists of NBER, 332–37; testing predictive value of, 339–45; using diversified set of, 316–17. *See also* Composite indexes
