Asymmetric Information, Corporate Finance, and Investment

Edited by R. GLENN HUBBARD

Affording valuable insights for applied research in financial markets, industrial organization, and public policy, these papers challenge a long-held precept of modern financial research by arguing that financial decisions of the firm *can* affect real economic activity, and that this is true for enough firms and consumers to have significant aggregate economic effects.

1990 353 pages Cloth ISBN: 0-226-35585-3

The Risk of Economic Crisis

Edited and with an Introduction by MARTIN FELDSTEIN

In this accessible and thought-provoking volume, Benjamin M. Friedman investigates the origins of financial crises in domestic capital markets, Paul Krugman examines the international origins and transmission of financial and economic crises, and Lawrence H. Summers explores the transition from financial crisis to economic collapse. The book also contains provocative observations by senior academics and others who have played leading roles in business and government.
