

This PDF is a selection from a published volume from the National Bureau of Economic Research

Volume Title: The Design and Implementation of U.S. Climate Policy

Volume Author/Editor: Don Fullerton and Catherine Wolfram, editors

Volume Publisher: University of Chicago Press

Volume ISBN: 0-226-36914-0; 978-0-226-26914-6

Volume URL: <http://www.nber.org/books/full10-1>

Conference Date: May 13-14, 2010

Publication Date: September 2012

Chapter Title: Indexes

Chapter Author(s): Don Fullerton, Catherine Wolfram

Chapter URL: <http://www.nber.org/chapters/c13354>

Chapter pages in book: (p. 319 - 331)

Contributors

Severin Borenstein
Haas School of Business
University of California, Berkeley
Berkeley, CA 94720-1900

James B. Bushnell
Department of Economics

Subject Index

Page numbers followed by the letter *f* or *t* refer to figures or tables, respectively.

- Abatement, model of, 68–72
- Adaptation. *See* Climate adaptation
- Adaptation policies, 230–31; adding natural supply and, 236–38; context of, 231–32; implications of, 240–42; pricing and capacity planning for, 232–36. *See also* Climate policies
- Additionality: defined, 201; question of, offset markets and, 204
- Adverse selection, offset markets and, 201–4, 206
- Agricultural output: average relationship between weather and yields, 274–76; effect of climate change on, 273–81; evolution of heat and drought tolerance over time and, 276–79; importance of extreme heat on, 274
- Agricultural policies, worsening heat and droughts and, 279–81
- Agriculture: climate change and, 15; growth of productivity of, 271–72, 272f; policy implications of worsening heat and droughts for, 279–81; role of, in US economy, 271–73
- Allowance allocation methods, cap-and-trade systems and, 114
- American Clean Energy and Security Act (2009). *See* Waxman-Markey American Clean Energy and Security Act (H.R. 2454) (2009)
- Anthropogenic carbon emissions, 95
- Anthropogenic CO₂ emissions, 94–96
- Automotive sector, environmental policies and, 15–16
- Baselines. *See* Emissions baselines
- “Belt-and-suspenders” approach, 7, 128
- Bill and Melinda Gates Foundation, 280
- Border tax adjustments (BTAs), 53–54, 59, 157; effect of, on emissions and exports, 54; existing studies of, 54
- Borlaug, Norman, 280
- BTAs. *See* Border tax adjustments (BTAs)
- Buildings sector, energy efficiency and, 16
- Business as usual (BAU) emissions, 202
- Cap-and-trade systems, 5–6, 7, 127–28; allowance allocation methods and, 114; effects of design features on, 113–14; national and subnational, 111–15; proposed eligibility measures for, 161–62; safety valve provisions and, 113–14
- Carbon cycle, overview of, 93–96, 96f
- Carbon emissions, markets for, 96–98
- Carbon offsets, 100. *See also* Offsets
- Carbon price burdens, measuring, 24–25
- Carbon pricing, 3–4; backward shifting of, 23; economic impact of, 22; economic studies of distributional analyses of,

- Carbon pricing (*continued*)
 22–23; forward shifting of, 23; greenhouse gas emissions and, 287–88
- Carbon pricing policies, measuring impact of, on household incomes, 22
- Carbon tax, 7
- Certified Emissions Reductions (CERs), 220–21
- CEX. *See* Consumer Expenditure Survey (CEX)
- Cities, climate change and, 14–15
- Clean Air Act, 109–10
- Clean Development Mechanism (CDM), 197, 220–21
- Climate adaptation: anticipatory, 231; assumptions for, 229–30; context of, 231–32; defined, 229; implications of changes in pricing and, 240–41; natural supply variable and, 236–38; pricing and capacity planning for, 232–36
- Climate change, 1, 12–13; agriculture and, 15, 273–81; cities and, 14–15; demand and supply of water and, 238–40; early economic research on, 2; exportation of jobs and, 4–5; market mechanisms to address, 98; role of innovation and, 65; weather and, 238
- Climate change legislation, 1
- Climate policies: compliance decision for, 214–15; design features of, 10–14; differential enforcement risks of, 220–21; direct costs of monitoring, 218–19; effects of, on household disposable income, 3; enforcement of, 213; government choices and, 215–16; incentives for compliance with, 214–18; innovation and, 5–6; interactions between different, 7–8, 115–18; interactions between state and federal, 7, 109–15; international policies and, 9–10; issues in designing, 10–14; labor markets and, 4, 37–50; mandatory vs. voluntary, 8–9; penalties and compliance in practice, 216–18; policy design with heterogeneous enforcement costs for, 221–22; possible effects of US, 3–6; results of study of distribution effects of, 32; state-level actions, 118–20. *See also* Adaptation policies; Environmental policies; Phase-ins; Spillovers
- CO₂ emissions, 93–94; market mechanisms to regulate, 98–99; markets for, 96–98; overview of carbon cycle, 94–96; property rights and, 99–100; regulations, 6
- Competition, imperfect, vertical targeting and, 189–90
- Compliance, with climate policies, incentives for, 214–18
- Computable general equilibrium (CGE) models, 5, 54–56
- Connecticut Clean Energy Communities (CCEC) program, 8, 148f; analysis of, 150–53; background of, 147; conclusions of study of, 153–54. *See also* Voluntary initiatives
- Connecticut Clean Energy Fund (CTFund): analysis of, 150–53; background of, 146–48; data for, 148–49, 148–50, 150t. *See also* Voluntary climate policies
- Consultative Group on International Agricultural Research (CGIAR), 280
- Consumer Expenditure Survey (CEX), 21, 23, 24; issues in using, 25–27
- Continuous emissions monitoring systems (CEMS), 182, 218
- Corn yields: effect of weather on, 274–76, 275t; growth in US, 271–72, 272f
- Corporate Average Fuel Economy (CAFE) standards, 116
- Crop research, 280
- Current Population Surveys (CPS), 41
- Distributional impacts, 21–22; background, 22–24; measuring carbon price burdens and, 24–25; results of study of, 27–32; use of Consumer Expenditure Survey for, 25–27
- Downstream regulations, 179; defined, 180. *See also* Upstream regulations
- Drought tolerance, agricultural output and, 276–81
- Electricity prices: data sources for, 41; labor markets and, 38–40. *See also* Energy prices
- Emissions: effect of border tax adjustments on, 54; in general equilibrium setting, 55–56; policy implications, 57–60; trade policy implications and, 57–60. *See also* Greenhouse gas (GHG) emissions
- Emissions baselines, 200, 202; correlated, among uncapped firms, 203–4; independently distributed, 202–3

- Employment. *See* Labor markets
- Energy consumption, residential, urban vs. suburban houses and, 263–65
- Energy efficiency, buildings sector and, 16
- Energy efficient investments, 301–3; alternative possible explanations, 309–10; alternative specifications, 310–12; background and data, 303–5; descriptive statistics, 305–7; evaluation of implied total cost, 312–15; regression results, 307–9
- Energy efficient technologies, 305–7, 306t
- Energy prices: analysis of labor markets and, 42–43; data sources for, 41; framework for conceptualizing effects of, on labor markets, 40. *See also* Electricity prices
- Enforcement: issues, 12, 213; model of, of incentive-based environmental policy, 214–18
- Environmental Impact and Sustainability Applied General Equilibrium Model (ENVISAGE model), 54
- Environmental policies, automotive sector and, 15–16. *See also* Climate policies
- European Union Emission Trading System (EU ETS), 198, 213–14, 218
- Free permit allocations, 157–58. *See also* Permit allocations
- Fuel economy standards, 115–16
- General equilibrium effects, 127. *See also* Interactions
- General equilibrium settings, emissions in, 55–56
- Greenhouse gas (GHG) emissions, 2; carbon pricing and, 287–88; data for study of, 290–91; empirical models and results, 294–99; empirical setting for study of, 289–90; initial evidence of study of, 291–94; regulating upstream vs. downstream, 179; transportation sector and, 287. *See also* Emissions
- Heat, extreme, importance of, on agricultural output, 274
- Heat tolerance, agricultural output and, 276–81
- Heckscher-Ohlin model, 56, 56n3, 56n4, 57
- Homeowners: descriptive statistics, 305, 306t; likelihood of having energy efficient appliances and, 307–12, 308t. *See also* Landlord-tenant problem
- Hot air, 204
- “Hot air” credits, 204
- H.R. 2454. *See* Waxman-Markey American Clean Energy and Security Act (H.R. 2454) (2009)
- hydrofluorocarbon-23 (HFC-23) mitigation, 200–201
- Imperfect competition, vertical targeting and, 189–90
- Initiatives, voluntary. *See* Voluntary initiatives
- Innovation: climate change problem and, 65; climate policy and, 5–6; literature on, 66–68; model of, 68–72; regulations and, 65–66
- Interactions, 127–29; between different climate policies, 7–8; between different jurisdictions, 7; rationales for multiple policies for, 133–37; textbook model of, 129–33; types of, 129; voluntary programs and, 8–9
- Intergovernmental Panel on Climate Change (IPCC), 204; emission trajectory scenarios of, 205–6, 205f
- Kyoto Treaty, 197, 202, 204
- Labor markets: analysis of energy prices and, 42–43; climate policy and, 4, 37–40; data sources for, 41; electricity prices and, 38–40; framework for conceptualizing effects of energy prices on, 40; regression analysis, 44–47
- Landlord-tenant problem, 301–2
- Leakage, 4–5, 57, 58, 110, 118; defined, 53–54; vertical targeting and, 186–87
- Lieberman-Warner Climate Security Act (2007), 1
- Market integration, vertical targeting and, 191
- Market mechanisms, for regulating CO₂ emissions, 98–99
- Miles driven, as function of urban form, 260–62
- Monitoring costs, heterogeneous, 218–22; direct, 218–19
- Monitoring issues, 12
- Moral hazard, offset markets and, 200–201

- Offset markets: adverse selection and, 201–4; criticisms of, 199–200; designing, 206–8; implications for designing, 206–8; moral hazard and, 200–201; motivation for, 197–99; “pleasant surprise” phenomenon and, 204–5
- Offset programs: economic efficiency and, 198; goals of, 198; need for, 198; vs. other forms of regulation, 197–98
- Offsets, 10–12, 197; vertical targeting and, 187–89
- Output-based permit allocation (OBPA), 9–10, 158
- Output-based rebating provisions, 161, 163n11; costs and benefits of, 163–68; illustration of proposed industries for, 161, 162f; welfare implications of, 168–69
- Particulate matter (PM) emissions, 79.
